2%

PER LEVEL
UP TO 21 LEVELS
PAID DAILY
ON EARNINGS

For every contract that produces positive earnings, each qualified upline position receives **2% of that contract's daily earnings** for up to 21 levels, based on rank.

MAXIMUM MATRIX PAYOUT

42%

OF THE CONTRACT'S DAILY EARNINGS

+ the breakage differential for leaders · no cap

KEY HIGHLIGHTS

- 2% per level, up to 21 levels
- Paid daily on every contract with positive earnings
- Rank determines depth and the daily reward cap
- Breakage differential: leaders earn the gap above their lines — no cap, no depth limit
- Line balance: no single line counts for more than its share — build wide

IMPORTANT NOTES

- Rewards are based on the contract's daily earnings, never on the purchase price.
- Members must be rank-qualified at every settlement to receive rewards at each level; only active modules count.
- Daily reward caps apply to the base matrix at all ranks; the differential has no cap.
- Every figure is an average, not a promise: results and rewards are not guaranteed; most members earn no commission at all.

HOW IT WORKS

1. Contracts generate daily earnings.
2. Each qualified upline receives 2% of that contract's daily earnings.
3. Paid up to your rank's maximum levels.
4. Leaders add the breakage differential: your entitlement minus the highest already claimed below you.
5. Rewards are paid daily in USDT at the 16:00 Dubai settlement; daily caps apply by rank.

DELTA ONE

THE MOMENTUM PLAN

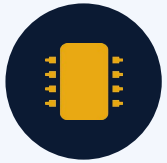

How Delta One pays you for introducing others — the base matrix, the breakage differential and the rules behind both

CUSTOMER EDITION · OCTOBER 2026 · DRAFT FOR LEGAL AND COMPLIANCE REVIEW

Delta One in one minute

Three things to understand before the plan

An AI trading engine

Software as a service: the Delta One AI engine looks for the right trades and the right way to trade them — arbitrage, high frequency and leverage — and does all the trading.

A module is a purchase

You purchase the AI engine in modules, for the amount you choose from 1,000 USDT — a software product, not a deposit. Every day the engine makes a result, the module receives its share: Daily Auto-Earn, settled at 12:00 UTC.

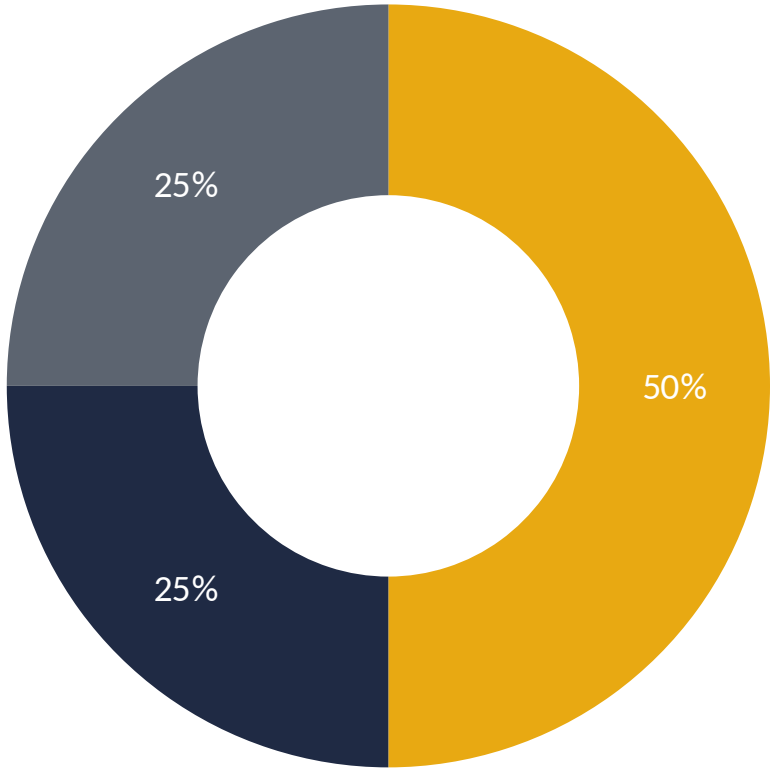

2×, then it ends

A module delivers at most two times its purchase price, price included, then it ends. The purchase price is not refundable; the first half of what you receive equals it, and only after that is it rewards.

Every 100 USDT of trading profit is shared three ways

The compensation plan is paid from its own quarter — never from anyone's purchase

50 USDT — **to members**

Their modules' daily results — on average 0.50% of each module on a day the engine earns 1.00% gross

25 USDT — **to the compensation plan**

Every commission in this plan — base matrix and breakage differential — comes from here. At most 21 USDT of it is ever paid on a contract.

25 USDT — **to the DAO Treasury**

The project's own share, which also keeps any commission no member qualifies for

No profit, no payout. A day without trading profit pays nobody — no member result, no commission.

0.50%

a day — the engine's average daily result

Every figure in this presentation uses it

An average, not a daily promise

Some days the engine produces nothing; other days several percent. Over time the daily results average about 0.50% for a module (1.00% gross).

Figures are averages over time

A monthly figure is what the average produces in thirty days. Any single day, month or year can land above or below it.

No profit, no payout

Days without trading profit pay nothing. The average itself can change, and nothing is guaranteed by Delta One, a bank or any government scheme.

A 1,000 USDT module at the average daily result

What a member sees: 5 USDT a day on average, results equal to the purchase price by about day 200, the module ends at 2,000 USDT by about day 400

1

Day 0

1,000 USDT purchase

Paid in USDT on BNB Smart Chain (BEP-20). Earns from the first settlement after the purchase is confirmed.

2

Days 1–10

Auto-rebuy

Every result opens a small rebuy module with its own 2× — and counts as new volume for the upline.

3

Day 11 on

Your switch

Auto-Rebuy ON = rebuy every day. OFF = the result goes to your app wallet: withdraw any time, 5 USDT minimum, gas fee only.

4

≈ Day 200

Purchase price back

Results received equal your 1,000 USDT purchase price — the first half of the 2×. Everything after this is rewards.

5

≈ Day 400

2,000 USDT · ends

The module has delivered 2× its purchase price, price included. Purchase a new module and the cycle restarts.

The Believer: keep Auto-Rebuy ON for the module's whole life and it delivers 220% instead of 200% — 2,200 USDT on 1,000 USDT, ending at about day 440. The choice is binding: the switch stays ON until 220%.

Paid two ways, on every contract, every profitable day

2% of every contract's daily earnings on each level your rank reaches — and the leader gap above everyone below you

The two ways you are paid

Both are a share of a contract's daily earnings — never of its purchase price. Together they never exceed 42% of what a contract earns

1 · Base matrix

2% per level, up to 21 levels

- Every qualified upline receives 2% of each contract's daily earnings, on every level their rank reaches: Fuji 3 levels, Everest 21.
- A 10,000 USDT contract earning 50 USDT a day pays each qualified upline 1.00 USDT a day — 30 USDT a month.
- Capped per day by rank: from 1,000 USDT (Fuji) to 7,000 USDT (Everest).

2 · Breakage differential

Your entitlement minus the highest claimed below you

- Each rank has an entitlement: 6% at Fuji, 12%, 18%, 24%, 30%, 36%, up to 42% at Everest.
- On every contract, after the base is paid, you receive the gap between your entitlement and the highest entitlement already claimed below you in that line.
- Not capped, no depth limit. When someone below you reaches your rank, their part of the gap is theirs — stay ahead of your leaders.

Seven ranks, named after mountains

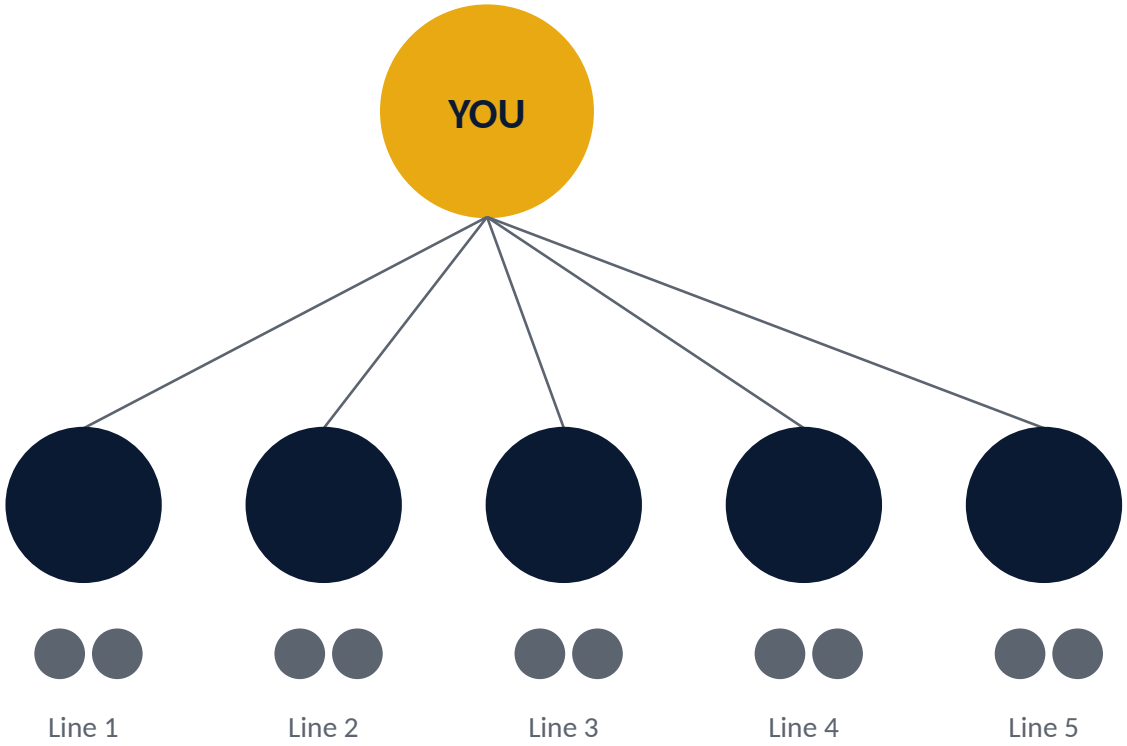

Three steps to qualify: your own purchase, your personal enrollments and your qualifying volume — counted line by line

Rank	Own purchase	Enrolled	Qualifying volume	Max per line	Paid levels	Entitlement	Daily cap (base)
1 · Fuji	1,000 USDT	2	2,000 USDT	50% · 2+ lines	1–3	6%	1,000 USDT
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	50% · 2+ lines	1–6	12%	2,000 USDT
3 · Matterhorn	6,000 USDT	4	12,000 USDT	33⅓% · 3+ lines	1–9	18%	3,000 USDT
4 · Denali	12,000 USDT	5	25,000 USDT	33⅓% · 3+ lines	1–12	24%	4,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	25% · 4+ lines	1–15	30%	5,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	20% · 5+ lines	1–18	36%	6,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	20% · 5+ lines	1–21	42%	7,000 USDT

Only active modules count toward qualifying volume. Ranks are rechecked at every 12:00 UTC settlement, so a rank is earned every day, not once.

Build wide: the line balance rule

A line is one person you enroll and everyone beneath them. No single line can count for more than a set share of a rank's qualifying volume

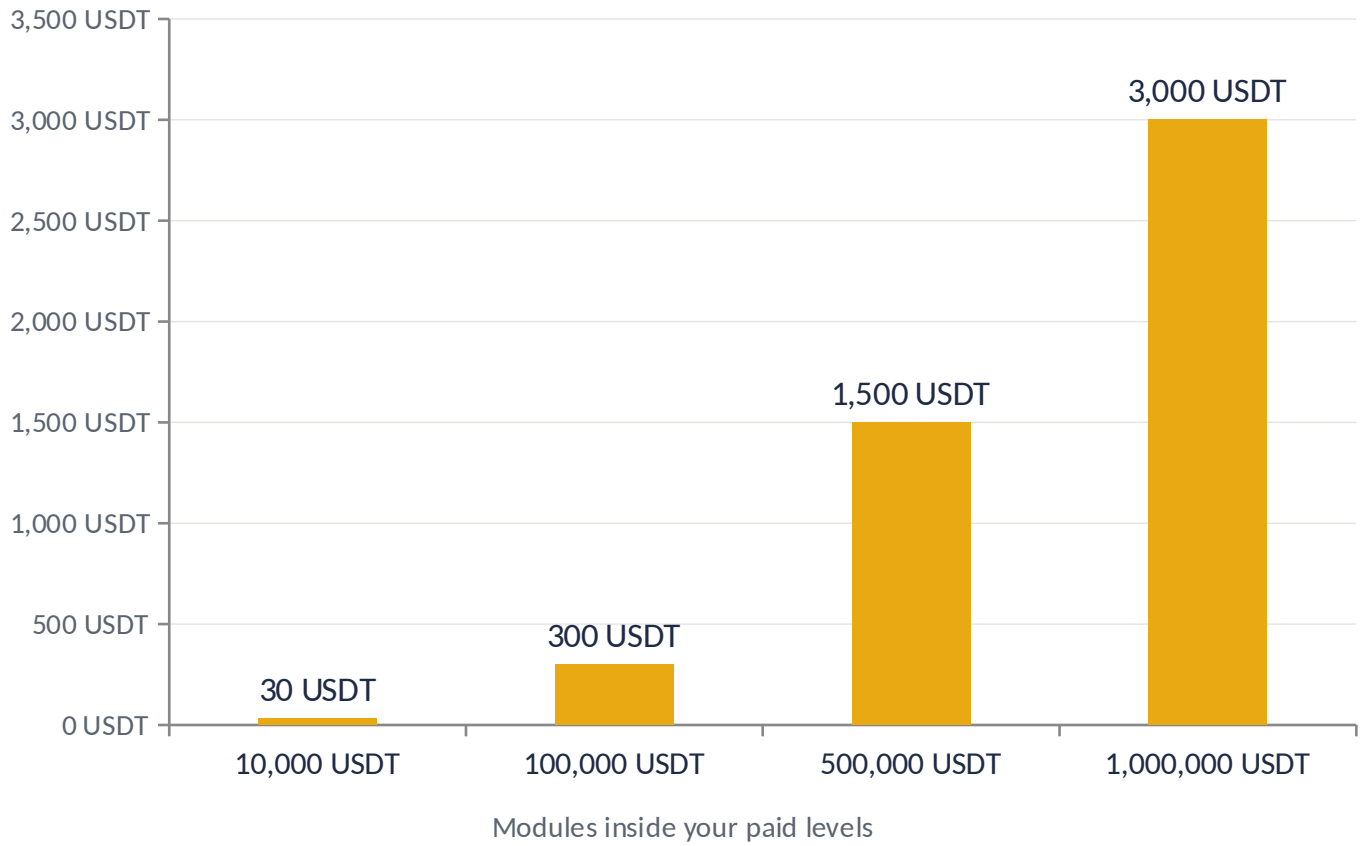

50%	**Fuji · Kilimanjaro** no line counts for more than 50% of the volume · at least 2 lines
33⅓%	**Matterhorn · Denali** no line counts for more than 33⅓% of the volume · at least 3 lines
25%	**Rainier** no line counts for more than 25% of the volume · at least 4 lines
20%	**K-2 · Everest** no line counts for more than 20% of the volume · at least 5 lines

Volume above the share simply doesn't count. Example: 13,500 USDT of team volume with 10,000 USDT in one line qualifies only as Kilimanjaro, not Matterhorn — balanced lines earn the higher rank, deeper pay and the larger differential.

The base matrix in numbers

Monthly base-matrix rewards from the volume inside your paid levels, at the average daily result (0.50% × 2% × 30 days)

1.00 USDT

a day from a 10,000 USDT contract

A 10,000 USDT contract earning 50 USDT a day at the average pays each qualified upline 2% of that: 1.00 USDT a day, 30 USDT a month, on every level their rank reaches.

100 USDT

a day from 1,000,000 USDT

A million USDT of modules inside your paid levels is 100 USDT a day — 3,000 USDT a month — from the base matrix alone, before the differential.

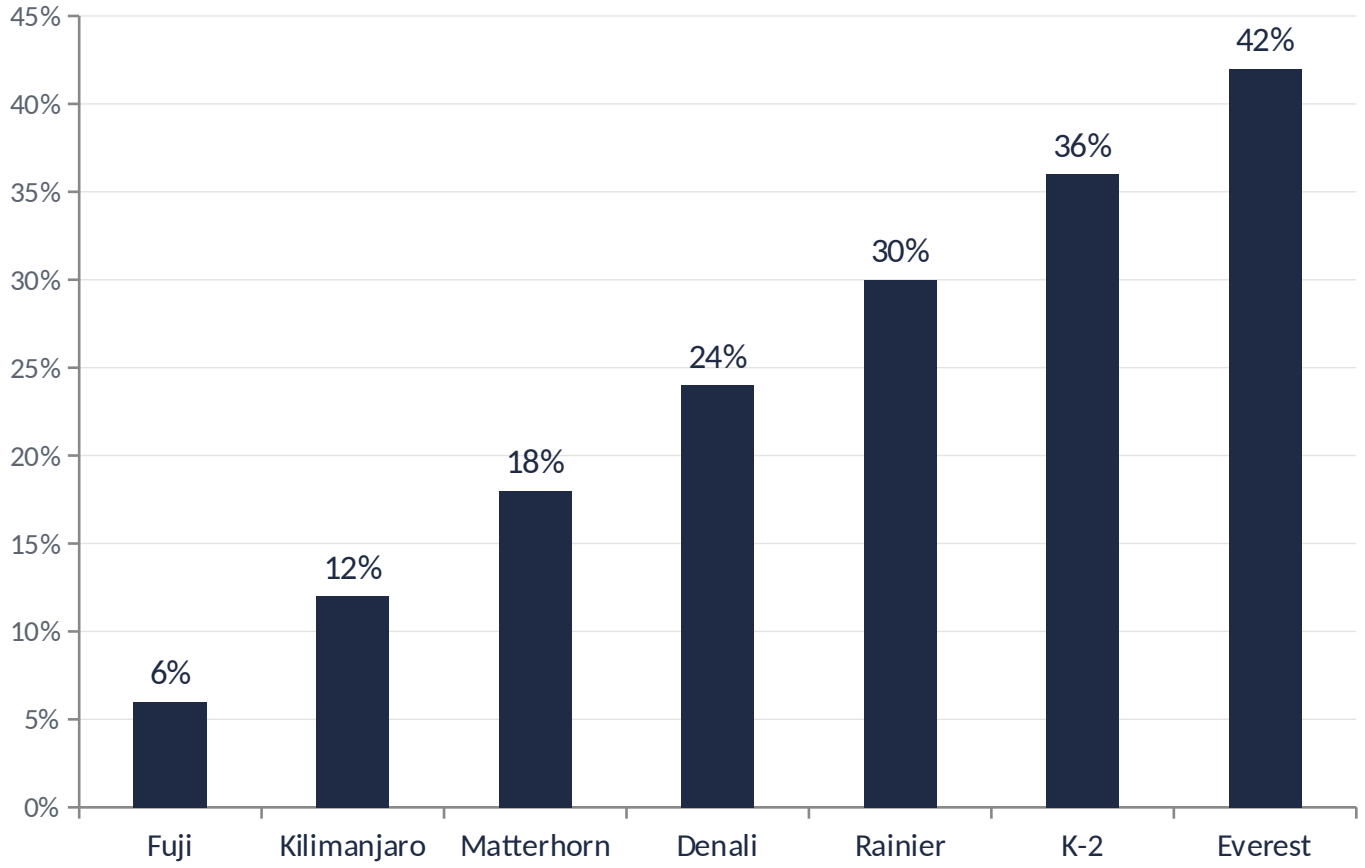

Small per module

which is the point

Rewards comes from volume, and volume comes from many members each with their own module and their own 2×.

The breakage differential: what leaders are paid

Each rank's entitlement to a contract's earnings. You receive the gap between yours and the highest already claimed below you in that line

A worked example

You are a Denali (24%) at the head of a new line whose first leader below you is a Fuji (6%). Nothing between you has claimed any of the gap, so you collect the whole 18 points above the Fuji on every contract in that line.

900 USDT

a day in differential on 1,000,000 USDT of modules in that line, at the average daily result — about 27,000 USDT a month, on top of the base matrix

Not capped · no depth limit · when someone below you reaches your rank, their part of the gap is theirs

Four organizations, worked to the USDT

Complete small organizations calculated with the same engine as every figure in the Delta One library — per month, at the average daily result

Scenario	Your purchase	Team volume	Lines	Your rank	Base / month	Differential / month	Total / month
A · Your first rank	1,000 USDT	2,000 USDT	2 × 1,000 USDT	Fuji	6.00 USDT	12.00 USDT	**18.00 USDT**
B · Building to Matterhorn	6,000 USDT	13,500 USDT	4 balanced lines	Matterhorn	40.50 USDT	284 USDT	**324 USDT**
C · Same team, one heavy line	6,000 USDT	13,500 USDT	10,000 USDT in one line	Kilimanjaro	40.50 USDT	202 USDT	**243 USDT**
D · A Denali with five lines	12,000 USDT	38,500 USDT	5 lines, each led by a Kilimanjaro	Denali	116 USDT	875 USDT	**990 USDT**

Compare B and C. Same 13,500 USDT of team volume. With 10,000 USDT of it in one line, only 4,000 USDT of that line counts toward Matterhorn, so you qualify as Kilimanjaro: fewer paid levels and a smaller gap. Balanced lines earn the higher rank, deeper pay and the larger differential. Your own module also earns its member result — 30 USDT a month on 6,000 USDT at the average — until it reaches 2×.

The Believer: 220% instead of 200%

A member who commits to keeping Auto-Rebuy ON for a module's entire life — and what that means for the line above them

	Standard module	Believer module
Auto-Rebuy switch	Yours to set from day 11, any day	**Locked ON from the choice until 220%**
Delivers in total	200% of the purchase price	**220% of the purchase price**
On 10,000 USDT at the 0.50% a day average	20,000 USDT · ends about day 400	**22,000 USDT · ends about day 440**
Rewards beyond the purchase price	10,000 USDT on 10,000 USDT	**12,000 USDT on 10,000 USDT**
Where the results go	Wallet or rebuy — your choice	**Always into rebuy modules, each with its own 2×**

Binding

Once chosen, the switch cannot be turned OFF until the module has delivered 220%.

Volume for your line

Every one of a Believer's results becomes a new rebuy module — new qualifying volume and new contracts paying the upline.

Day counts are averages

The 220% is reached as the rebuy modules deliver; a lower average makes every date later.

Six rules to remember

Say these out loud to prospects — they build trust

Paid on earnings, never on purchases

Commission is a share of what a contract earns that day. A purchase price never pays anyone.

No profit, no payout

A day without trading profit pays nobody — no member result, no commission.

Balance your lines

One line counts for at most 50% / 33⅓% / 25% / 20% of a rank's volume.

Stay ahead

When someone below you matches your rank, their part of the gap is theirs.

Modules end at 2×

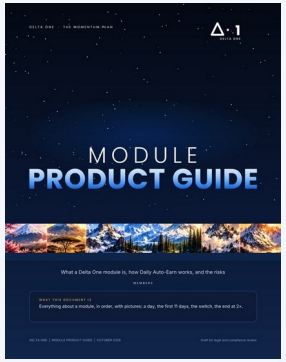

Commissions on a module stop when it ends; only active modules count toward volume. New modules restart the cycle.

Paid daily, in USDT

Settlement at 12:00 UTC every day; commission to your app wallet in USDT on BNB Smart Chain. Withdraw any time, 5 USDT minimum, gas fee only.

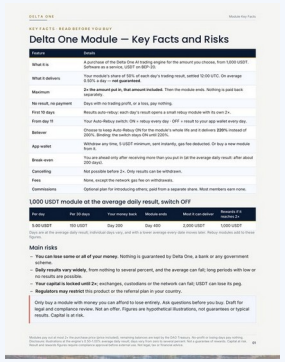

The documents behind this presentation

Every customer receives these — read them before you buy, and hand them to the people you introduce

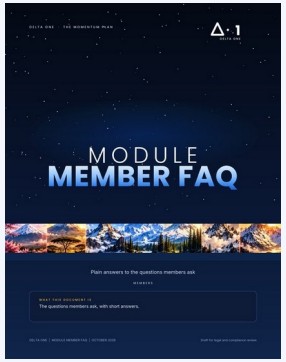

Module Product Guide

What a module is, how a day works, the first eleven days, your money and the risks.

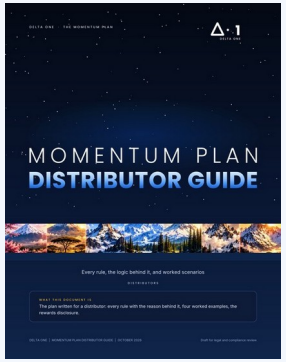

Key Facts and Risks

One page to read before you buy.

Member FAQ

Plain answers to the questions members actually ask.

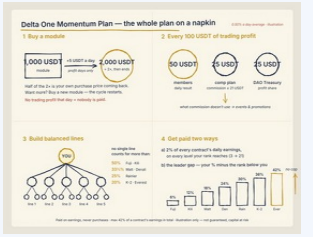

Distributor Guide

Every rule of the plan with the logic behind it, four scenarios and the rewards disclosure.

Cheat Sheet

The whole plan on one page.

Napkin Presentation

Five minutes over coffee: buy a module, the 100 USDT split, balanced lines, paid two ways.

Important disclosures

- Draft for legal and compliance review. Not an offer. Nothing here goes to a prospect before sign-off.
- Every figure is a hypothetical illustration at the engine's average daily result of 0.50% a day (1.00% gross). Individual days vary from zero to several percent; the average can change; days without profit pay nothing.
- Results and rewards are not guaranteed by Delta One, a bank or any government scheme. Most members in the model earn no commission at all. Rewards examples are not typical results.
- A module is a software purchase, not a deposit: the purchase price is not refundable and cannot be withdrawn. A module delivers at most 2× its purchase price, price included, and cannot be cancelled before 2×. The amount can be lost in whole or in part. USDT can lose its peg; exchanges, custodians and the network can fail.
- Programs that pay introducers from the trading results of the people they enroll are regulated as securities and/or direct selling in many jurisdictions. Licensing and legal review come before marketing.
- Nothing in this presentation is legal, tax or financial advice. Only purchase a module with money you can afford to lose entirely, and ask questions before you buy.

Build wide. Stay ahead. Tell the truth about the risks.

Plan rules, worked examples and rank requirements — 2% per level with the breakage differential

7 SUMMITS TO SUCCESS · 2% PER LEVEL · AVERAGE DAILY RESULT 0.50–1.00%

WHAT THIS DOCUMENT IS

The complete plan with every rule and every number: how a module earns, how the base matrix and the breakage differential pay, the seven ranks and the line balance rule.

Draft for legal and compliance review

01 THE PLAN

The Plan at a Glance

The Momentum Plan. Delta One's compensation plan pays a **base matrix of 2% per level** on up to 21 levels — a pool of **42%** of each contract's daily earnings — and adds the **breakage differential**, which pays leaders, by rank, the part of the pool that rank reach alone would leave unpaid, so the full pool is paid on every contract. This guide covers the ranks, the base matrix and the rewards it produces; the differential is explained step by step in the Breakage Differential guide and the Distributor Guide.

Rank	Paid levels	Max base matrix (2% per level)	Differential entitlement	Daily cap (base only)
1 · Fuji	1–3	6%	6%	1,000 USDT
2 · Kilimanjaro	1–6	12%	12%	2,000 USDT
3 · Matterhorn	1–9	18%	18%	3,000 USDT
4 · Denali	1–12	24%	24%	4,000 USDT
5 · Rainier	1–15	30%	30%	5,000 USDT
6 · K-2	1–18	36%	36%	6,000 USDT
7 · Everest	1–21	42%	42%	7,000 USDT

In one sentence: every contract that produces approved positive earnings pays **2% of that day's earnings** to each qualified upline position, up to **21 levels** deep. Rank sets how many levels deep you are paid and the most you can collect per day.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

01 THE PLAN

How It Works

- **Contracts generate daily earnings** — assumed in this guide at **0.50% to 1.00% of the contract amount per day**.
- **Each qualified upline receives 2%** of that contract's *daily earnings* — not 2% of the purchase price.
- **Paid to your rank's maximum level.** Fuji is paid on levels 1–3; Everest on levels 1–21.
- **Rewards are paid daily**, and **daily reward caps** apply by rank: 1,000 USDT (Fuji) to 7,000 USDT (Everest).
- **Maximum matrix payout is 42%** of a contract's daily earnings (21 levels × 2%). No other pools or units.

Rank requirements and benefits

Rank	Own purchase	Enrolled	Qualifying volume	Line rule	Paid levels	Max matrix	Daily cap	Max / month	Max / year
1 · Fuji	1,000 USDT	2	2,000 USDT	≤50% · 2 lines	1–3	6%	1,000 USDT	30,000 USDT	365,000 USDT
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	≤50% · 2 lines	1–6	12%	2,000 USDT	60,000 USDT	730,000 USDT
3 · Matterhorn	6,000 USDT	4	12,000 USDT	≤33⅓% · 3 lines	1–9	18%	3,000 USDT	90,000 USDT	1,095,000 USDT
4 · Denali	12,000 USDT	5	25,000 USDT	≤33⅓% · 3 lines	1–12	24%	4,000 USDT	120,000 USDT	1,460,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	≤25% · 4 lines	1–15	30%	5,000 USDT	150,000 USDT	1,825,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	≤20% · 5 lines	1–18	36%	6,000 USDT	180,000 USDT	2,190,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	≤20% · 5 lines	1–21	42%	7,000 USDT	210,000 USDT	2,555,000 USDT

Max / month = daily cap × 30 days; max / year = daily cap × 365 days. Max matrix = share of each contract's daily earnings you can collect across your paid levels.

Line balance rule. A line is one personal enrollee and everyone beneath them. No single line can count for more than the share shown toward a rank's qualifying volume: 50% for Fuji and Kilimanjaro (at least two lines), one third for Matterhorn and Denali (three lines), 25% for Rainier (four lines) and 20% for K-2 and Everest (five lines). Volume above that share in one line does not count toward the rank.

The core formula

Daily matrix reward = 2% × daily contract result × purchases inside your paid levels — capped at your rank's daily reward cap.
Monthly shortcut (30 days): volume in paid levels × daily result × 0.60

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

PER 1M USDT IN PAID LEVELS · LOW

PER 1M USDT IN PAID LEVELS · HIGH
6,000 USDT
per month at 1.00% / day · 73,000 USDT / yr

Module terms — the 2× maximum

Contracts are purchased as **modules, starting at 1,000 USDT**. A module pays its daily earnings until the total paid out reaches **2× the amount put in** — a 1,000 USDT module pays at most 2,000 USDT. The purchase price is not refunded: the 2× is everything the module pays. When a module reaches 2× it ends, and any balance left in it is kept by the DAO Treasury. To keep earning, a member buys a new module.

Daily result	Module ends on day	Purchase price recovered by day	Total paid on 1,000 USDT	Net rewards on 1,000 USDT	Upline commissions on it end
0.50%	400	200	2,000 USDT	1,000 USDT	Day 400
0.75%	267	133	2,000 USDT	1,000 USDT	Day 267
1.00%	200	100	2,000 USDT	1,000 USDT	Day 200

Every upline commission is a share of a module's daily earnings, so it stops when that module ends. Over a module's whole life each qualified upline receives at most 4% of the purchase price, and the whole line at most 84%. Team rewards figures in this document assume the team's volume stays active — members buy new modules as old ones reach 2×. End days are at the average daily result.

No profit, no payout, no commissions. Members and the upline are paid only on trading days that produce a profit. On a day with no profit, or a loss, no earnings are reported, the member receives nothing and no commissions are paid. Every figure in this document is hypothetical: it uses an average daily result (0.50%, 0.75% or 1.00% a day). The engine's actual days vary, some nothing and others several percent, so every figure is an average over time, not what one day pays. Runs of days without profit lower monthly rewards and push back the day a module reaches 2×.

02 ASSUMPTIONS

Assumptions Used in Every Example

Contracts are stated to earn **0.50%–1.00% per day**. Every figure is shown at the low, mid and high points of that range. Planning examples use the **low end (0.50%)**.

Scenario	Daily result	Monthly (30 days)	10,000 USDT contract earns / day	Each upline earns / day from it
Low	0.50%	15.0%	50.00 USDT	1.00 USDT
Mid	0.75%	22.5%	75.00 USDT	1.50 USDT
High	1.00%	30.0%	100.00 USDT	2.00 USDT

– 30-day month at the **average daily result**. Individual days vary, some nothing and others several percent, and days with no profit or a loss pay nothing — no member payout and no commissions — so a single month can land above or below these figures.

- Each module's result is calculated on its own amount; growth comes only from rebuy modules, each with its own 2× maximum. Each module pays until it reaches 2× the purchase price, then ends; team figures assume volume stays active through rebuy and new modules.
- Members are fully rank-qualified and the referenced volume sits inside their paid levels.
- “Rewards” means matrix rewards unless a table says it includes own-contract earnings.

03 EXAMPLE A

A 1,000 USDT Purchase

A new member opens a 1,000 USDT contract — the Own Purchase required for Fuji, the first rank.

What the buyer earns on their own contract

Scenario	Per day	Per month	First year	Module ends	Total paid (2×)
0.50% / day	5.00 USDT	150.00 USDT	1,825.00 USDT	Day 400	2,000 USDT
0.75% / day	7.50 USDT	225.00 USDT	2,000.00 USDT	Day 267	2,000 USDT
1.00% / day	10.00 USDT	300.00 USDT	2,000.00 USDT	Day 200	2,000 USDT

First-year figures stop at the 2× maximum. Half of the total is the member's own purchase price coming back; the net rewards over the module's life are 1,000 USDT.

What this contract pays the upline

Scenario	Each upline / day	Each upline / month	Each upline / first year	All 21 levels / month	All 21 levels / first year
0.50% / day	0.100 USDT	3.00 USDT	36.50 USDT	63.00 USDT	766.50 USDT
0.75% / day	0.150 USDT	4.50 USDT	40.00 USDT	94.50 USDT	840.00 USDT
1.00% / day	0.200 USDT	6.00 USDT	40.00 USDT	126.00 USDT	840.00 USDT

Path to Fuji

- Own purchase: 1,000 USDT ✓ · Personal enrollments: 2 · Qualifying volume: 2,000 USDT (e.g. two enrollees at 1,000 USDT each — the line rule allows at most 1,000 USDT from either line).
- Once qualified: paid 2% on levels 1–3, capped at 1,000 USDT / day.

Fuji example: 2 enrollees each sponsor 2, who each sponsor 2 (2 + 4 + 8 = 14 accounts) at 1,000 USDT. Volume in paid levels = 14,000 USDT → monthly matrix reward of **42.00 USDT / 63.00 USDT / 84.00 USDT** (low / mid / high) — **511.00 USDT / 766.50 USDT / 1,022.00 USDT per year**.

> Rewards are 2% of *earnings*, not of purchases — a single small contract pays the upline cents per day. Rewards in this plan comes from large total purchases spread across many levels.

04 EXAMPLE B

A 10,000 USDT Purchase

MODULE EARNS / MONTH
1,500 USDT–3,000 USDT
first year 18,250 USDT–20,000 USDT · max 20,000 USDT

EACH UPLINE / MONTH
30 USDT–60 USDT
first year 365 USDT–400 USDT

RANK FIT
Matterhorn
on Own Purchase (6,000 USDT min)

What the buyer earns on their own contract

Scenario	Per day	Per month	First year	Module ends	Total paid (2×)
0.50% / day	50.00 USDT	1,500.00 USDT	18,250.00 USDT	Day 400	20,000 USDT
0.75% / day	75.00 USDT	2,250.00 USDT	20,000.00 USDT	Day 267	20,000 USDT
1.00% / day	100.00 USDT	3,000.00 USDT	20,000.00 USDT	Day 200	20,000 USDT

First-year figures stop at the 2× maximum. Half of the total is the member's own purchase price coming back; the net rewards over the module's life are 10,000 USDT.

What this contract pays up the line

Scenario	Each upline / day	Each upline / month	Each upline / first year	All 21 levels / month	All 21 levels / first year
0.50% / day	1.000 USDT	30.00 USDT	365.00 USDT	630.00 USDT	7,665.00 USDT
0.75% / day	1.500 USDT	45.00 USDT	400.00 USDT	945.00 USDT	8,400.00 USDT
1.00% / day	2.000 USDT	60.00 USDT	400.00 USDT	1,260.00 USDT	8,400.00 USDT

Who in the upline gets paid (0.75% / day: 1.50 USDT per eligible upline per day)

Upline at...	Fuji	Kilimanjaro	Matterhorn	Denali	Rainier	K-2	Everest
Level 1	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT
Level 3	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT
Level 5	—	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT
Level 8	—	—	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT
Level 11	—	—	—	1.50 USDT	1.50 USDT	1.50 USDT	1.50 USDT
Level 14	—	—	—	—	1.50 USDT	1.50 USDT	1.50 USDT
Level 17	—	—	—	—	—	1.50 USDT	1.50 USDT
Level 21	—	—	—	—	—	—	1.50 USDT

— = not paid at that depth for that rank. The plan does not state whether unpaid levels compress to the next qualified upline (see section 10).

A 10,000 USDT Own Purchase meets Matterhorn's 6,000 USDT purchase price requirement but not Denali's 12,000 USDT. Holding Matterhorn also needs 4 personal enrollments and 12,000 USDT qualifying volume, with

no more than 4,000 USDT counted from any one line.

05 EXAMPLE C

1,000,000 USDT in Your Sales Team

Rewards depends on the daily result and how much of the 1M USDT sits inside the levels your rank pays.

TEAM AT LOW	TEAM AT MID	TEAM AT HIGH
3,000 USDT	4,500 USDT	6,000 USDT
per month · 36,500 USDT / year	per month · 54,750 USDT / year	per month · 73,000 USDT / year

If all 1,000,000 USDT is inside your paid levels

Scenario	Team earnings / day	Your 2% / day	Your 2% / month	Your 2% / year
0.50% / day	5,000 USDT	100.00 USDT	3,000 USDT	36,500 USDT
0.75% / day	7,500 USDT	150.00 USDT	4,500 USDT	54,750 USDT
1.00% / day	10,000 USDT	200.00 USDT	6,000 USDT	73,000 USDT

Effect of rank depth — 1M USDT spread evenly across 21 levels

Rank	Paid levels	Volume paid on	Monthly @ 0.50%	Yearly @ 0.50%	Monthly @ 1.00%	Yearly @ 1.00%
1 · Fuji	1–3	142,857 USDT	429 USDT	5,214 USDT	857 USDT	10,429 USDT
2 · Kilimanjaro	1–6	285,714 USDT	857 USDT	10,429 USDT	1,714 USDT	20,857 USDT
3 · Matterhorn	1–9	428,571 USDT	1,286 USDT	15,643 USDT	2,571 USDT	31,286 USDT
4 · Denali	1–12	571,429 USDT	1,714 USDT	20,857 USDT	3,429 USDT	41,714 USDT
5 · Rainier	1–15	714,286 USDT	2,143 USDT	26,071 USDT	4,286 USDT	52,143 USDT
6 · K-2	1–18	857,143 USDT	2,571 USDT	31,286 USDT	5,143 USDT	62,571 USDT
7 · Everest	1–21	1,000,000 USDT	3,000 USDT	36,500 USDT	6,000 USDT	73,000 USDT

1,000,000 USDT in your team produces about **3,000 USDT–6,000 USDT per month** (36,500 USDT–73,000 USDT per year) in matrix rewards. 1M USDT is Everest's qualifying volume, but Everest also requires a 200,000 USDT Own Purchase and 21 personal enrollments. Six-figure monthly incomes need team volume in the tens of millions. These figures assume the 1M USDT stays active: as modules reach 2× and end, members must buy new ones.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Volume needed to reach each rank's daily cap

Rank	Daily cap	Monthly max	Yearly max	Volume @ 0.50%	Volume @ 0.75%	Volume @ 1.00%
1 · Fuji	1,000 USDT	30,000 USDT	365,000 USDT	10.00M USDT	6.67M USDT	5.00M USDT
2 · Kilimanjaro	2,000 USDT	60,000 USDT	730,000 USDT	20.00M USDT	13.33M USDT	10.00M USDT
3 · Matterhorn	3,000 USDT	90,000 USDT	1,095,000 USDT	30.00M USDT	20.00M USDT	15.00M USDT
4 · Denali	4,000 USDT	120,000 USDT	1,460,000 USDT	40.00M USDT	26.67M USDT	20.00M USDT
5 · Rainier	5,000 USDT	150,000 USDT	1,825,000 USDT	50.00M USDT	33.33M USDT	25.00M USDT
6 · K-2	6,000 USDT	180,000 USDT	2,190,000 USDT	60.00M USDT	40.00M USDT	30.00M USDT
7 · Everest	7,000 USDT	210,000 USDT	2,555,000 USDT	70.00M USDT	46.67M USDT	35.00M USDT

Beyond these volumes, more team growth does not raise matrix rewards at that rank — the cap binds. Ranking up raises the cap.

06 REWARDS TARGET

What It Takes to Earn 10,000 USDT / Month

10,000 USDT per month = 121,667 USDT per year (365 days).

DAILY TARGET
333.33 USDT
every rank's cap is above this

VOLUME IN PAID LEVELS
1.7M USDT–3.3M USDT
high – low return

PRACTICAL MINIMUM RANK
Matterhorn
9 paid levels

Route 1 — matrix rewards only

Scenario	Volume in paid levels	Accounts @ 2,500 USDT	Accounts @ 5,000 USDT	Accounts @ 10,000 USDT
0.50% / day	3.33M USDT	1,333	667	333
0.75% / day	2.22M USDT	889	444	222
1.00% / day	1.67M USDT	667	333	167

Which rank?

- **Fuji (3 levels)** would need 1.67M USDT–3.33M USDT inside your first 3 levels — unrealistic.
- **Kilimanjaro (6 levels)** is possible but needs very wide personal sponsoring.
- **Matterhorn (9 levels)** is the practical minimum: 6,000 USDT Own Purchase, 4 personal enrollments, 12,000 USDT qualifying volume.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Sample organization — Matterhorn, average daily result 0.50%

Level	Accounts	Avg purchase	Volume	Monthly @ 0.50%	Yearly @ 0.50%	Monthly @ 1.00%
Level 1	2	5,000 USDT	10,000 USDT	30 USDT	365 USDT	60 USDT
Level 2	8	5,000 USDT	40,000 USDT	120 USDT	1,460 USDT	240 USDT
Level 3	20	5,000 USDT	100,000 USDT	300 USDT	3,650 USDT	600 USDT
Level 4	40	5,000 USDT	200,000 USDT	600 USDT	7,300 USDT	1,200 USDT
Level 5	70	5,000 USDT	350,000 USDT	1,050 USDT	12,775 USDT	2,100 USDT
Level 6	100	5,000 USDT	500,000 USDT	1,500 USDT	18,250 USDT	3,000 USDT
Level 7	125	5,000 USDT	625,000 USDT	1,875 USDT	22,812 USDT	3,750 USDT
Level 8	142	5,000 USDT	710,000 USDT	2,130 USDT	25,915 USDT	4,260 USDT
Level 9	160	5,000 USDT	800,000 USDT	2,400 USDT	29,200 USDT	4,800 USDT
Total	**667**		**3,335,000 USDT**	**10,005 USDT**	**121,728 USDT**	**20,010 USDT**

At the high end (1.00%) the same 10,000 USDT needs only half the team — about 333 accounts at 5,000 USDT.

Route 2 — own contract only

Scenario	Own purchase needed for 10,000 USDT / month
0.50% / day	66,667 USDT
0.75% / day	44,444 USDT
1.00% / day	33,333 USDT

A module pays this only until it reaches 2× (day 200–400), then a new module is needed. Half of what it pays is the member's own purchase price coming back.

Route 3 — blend (0.50% / day)

A 25,000 USDT own contract (Rainier's purchase level) earns **3,750 USDT / month** at 0.50%. Add about **2.08M USDT** of volume in your paid levels (6,250 USDT / month) to reach 10,000 USDT. Most real incomes in this plan blend own-contract earnings with matrix rewards.

07 REWARDS TARGET

What It Takes to Earn 100,000 USDT / Month

100,000 USDT per month = 1,216,667 USDT per year (365 days).

DAILY TARGET
3,333 USDT
Fuji, Kilimanjaro, Matterhorn caps too low

VOLUME IN PAID LEVELS
16.7M USDT–33.3M USDT
high – low return

MINIMUM RANK
Denali
4,000 USDT / day cap

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Matrix rewards only

Scenario	Volume in paid levels	Accounts @ 5,000 USDT	Accounts @ 10,000 USDT	Accounts @ 25,000 USDT
0.50% / day	33.33M USDT	6,667	3,333	1,333
0.75% / day	22.22M USDT	4,444	2,222	889
1.00% / day	16.67M USDT	3,333	1,667	667

Ranks that unlock 100K USDT

Rank	Own purchase	Personal enrollments	Qualifying volume	Levels	Cap / month	Headroom over 100K USDT
4 · Denali	12,000 USDT	5	25,000 USDT	1–12	120,000 USDT	20,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	1–15	150,000 USDT	50,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	1–18	180,000 USDT	80,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	1–21	210,000 USDT	110,000 USDT

Sample organization — Rainier, average daily result 0.50%

Need **33.33M USDT** in levels 1–15. One route: 7 personally sponsored leaders, each building a leg of about 4.76M USDT (≈952 accounts averaging 5,000 USDT) within 15 levels — **≈6,667 active accounts**. At 1.00% / day the same rewards needs 16.67M USDT (≈3,333 accounts).

Adding your own contract (0.50% / day)

Own purchase	Own earnings / month	Matrix needed	Volume in paid levels @ 0.50%	@ 1.00%
25,000 USDT	3,750 USDT	96,250 USDT	32.08M USDT	15.42M USDT
50,000 USDT	7,500 USDT	92,500 USDT	30.83M USDT	14.17M USDT
200,000 USDT	30,000 USDT	70,000 USDT	23.33M USDT	6.67M USDT
500,000 USDT	75,000 USDT	25,000 USDT	8.33M USDT	None — own contract alone

Last column recalculates both own earnings and matrix at 1.00% / day.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

08 REWARDS TARGET

What It Takes to Earn 1,000,000 USDT / Month

1,000,000 USDT per month = 12,166,667 USDT per year (365 days).

Key finding: 1,000,000 USDT / month cannot come from matrix rewards alone.
1M USDT / month = 33,333 USDT / day. The highest daily cap (Everest) is **7,000 USDT / day = 210,000 USDT / month**. Under the published rules the matrix tops out at about 21% of the target.

EVEREST MATRIX MAX
210,000 USDT
per month · 2,555,000 USDT / year at the cap

TEAM VOLUME TO FILL CAP
35M USDT–70M USDT
inside levels 1–21

OWN CONTRACT FOR THE REST
2.6M USDT–5.3M USDT
earning 790,000 USDT / month

The only path within the plan: Everest at full cap + a large own contract

Step 1 — Reach Everest and fill the cap (210,000 USDT / month).

- Own purchase 200,000 USDT · 21 personal enrollments · 1,000,000 USDT qualifying volume, with no more than 200,000 USDT counted from any one line (at least five lines).
- Volume in levels 1–21 to hit 7,000 USDT / day: **70.00M USDT** at 0.50%, **46.67M USDT** at 0.75%, **35.00M USDT** at 1.00%.
- At a 5,000 USDT average purchase: about **14,000 / 9,333 / 7,000 active accounts**.

Step 2 — Earn the remaining 790,000 USDT / month from your own contract (assumes own-contract earnings are not subject to the daily cap; the plan does not say). The module ends when it has paid 2×, so this must be repurchased every 200–400 days, and half of what it pays is the purchase price coming back.

Scenario	Everest matrix	Own purchase needed	Own earnings / month	Total / month
0.50% / day	210,000 USDT	5.27M USDT	790,000 USDT	1,000,000 USDT
0.75% / day	210,000 USDT	3.51M USDT	790,000 USDT	1,000,000 USDT
1.00% / day	210,000 USDT	2.63M USDT	790,000 USDT	1,000,000 USDT

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Full checklist — 1,000,000 USDT / month at 0.75% / day (mid-range)

Requirement	Amount
Rank	Everest (rank 7 of 7)
Personal enrollments	21 minimum
Qualifying volume	1,000,000 USDT minimum, max 200,000 USDT from any one line (5+ lines)
Team volume in levels 1–21	≈46.67M USDT (≈9,333 accounts at 5,000 USDT avg)
Matrix rewards (capped)	7,000 USDT / day = 210,000 USDT / month
Own active contract	≈3.51M USDT (earning 26,333 USDT / day)
Total	≈33,333 USDT / day = 1,000,000 USDT / month

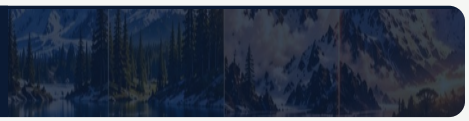

Why the matrix alone can't get there

Scenario	Volume needed if there were no cap	What the cap allows
0.50% / day	333.33M USDT	210,000 USDT / month
0.75% / day	222.22M USDT	210,000 USDT / month
1.00% / day	166.67M USDT	210,000 USDT / month

Even with 333.33M USDT of team purchases, an Everest member is still paid 7,000 USDT per day. Any claim of 1M USDT / month from the Delta One matrix alone is inconsistent with the plan's own caps.

09 TIMING

From Purchase to Commission

How long it takes for new purchase volume to show up as commissions in the upline. Each qualified upline receives 2% of a contract's daily earnings; the whole line together can receive up to 42%.

When commissions start

Day	What happens	Upline commission
Day 0	Purchase confirmed on BNB Smart Chain (BEP-20 USDT) and the module activated	None yet
Day 1	First daily result credited at the 12:00 UTC settlement	First commission credited to every qualified upline at the same settlement
Every profitable day	Approved positive result credited at the 12:00 UTC settlement	Paid daily, at the same settlement as the result
Day with no profit or a loss	No earnings reported; no payout to the member	No commissions that day
Day 30	One month of earnings	≈ 30 daily payments
Day 200–400	Module reaches 2× and ends (day 200 at 1.00%, day 400 at 0.50%, counting profitable days only)	Commissions on that module stop; its rebuy modules keep paying until each reaches its own 2×, and a new module starts the cycle again

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Confirmed schedule: a module earns from the first 12:00 UTC settlement after the day its purchase is confirmed, and commissions are credited at the same settlement as the results they come from. Ranks are rechecked at every settlement, and only active modules count toward qualifying volume.

How fast a 10,000 USDT purchase turns into upline commissions

Contract result	Each upline / day	First 30 days	First 90 days	Module ends	Each upline, whole module
0.50% / day	1.00 USDT	30.00 USDT	90.00 USDT	Day 400	400 USDT (4% of purchase price)
0.75% / day	1.50 USDT	45.00 USDT	135.00 USDT	Day 267	400 USDT (4% of purchase price)
1.00% / day	2.00 USDT	60.00 USDT	180.00 USDT	Day 200	400 USDT (4% of purchase price)

Total commissions a module pays the whole upline over its life

Contract result	Module life	Full 42% pool
0.50% / day	400 days	84% of purchase price (8,400 USDT on 10,000 USDT)
0.75% / day	267 days	84% of purchase price (8,400 USDT on 10,000 USDT)
1.00% / day	200 days	84% of purchase price (8,400 USDT on 10,000 USDT)

Commissions are a share of *earnings*, so purchase volume converts into commissions one day at a time and stops when the module reaches 2×. The return rate changes how fast this happens, not the total: a module always pays 2× the purchase price to its owner and the same share of that to the upline.

10 SUMMARY

Cheat Sheet

Goal	Per year	Per day	Min. rank	Volume in paid levels (0.50% / 0.75% / 1.00%)	Matrix alone?
10,000 USDT / mo	121,665 USDT	333 USDT	Matterhorn (practical)	3.33M USDT / 2.22M USDT / 1.67M USDT	Yes
100,000 USDT / mo	1,216,665 USDT	3,333 USDT	Denali	33.33M USDT / 22.22M USDT / 16.67M USDT	Yes
210,000 USDT / mo	2,555,000 USDT	7,000 USDT	Everest	70.00M USDT / 46.67M USDT / 35.00M USDT	Yes — plan maximum
1,000,000 USDT / mo	12,166,667 USDT	33,333 USDT	Everest	Capped at 210K USDT + own contract of 5.27M USDT / 3.51M USDT / 2.63M USDT	No

Rules of thumb

- Every **1M USDT** in your paid levels = **3,000 USDT / 4,500 USDT / 6,000 USDT** per month (36,500 USDT / 54,750 USDT / 73,000 USDT per year).
- A 10,000 USDT contract pays each eligible upline **1.00 USDT–2.00 USDT per day** (30 USDT–60 USDT per month).
- Depth matters as much as width: rank decides whether deep levels pay you at all.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

– The daily cap, not team size, sets the ceiling: **210,000 USDT / month (2,555,000 USDT / year) at Everest**.

11 OPEN QUESTIONS

Confirmed by Delta One

– **Daily result:** variable — each module receives its share of 50% of the day's gross trading result, in proportion to its size. 0.50% a day is the engine's average daily result and the rate used in this guide, not a fixed or promised figure; individual days vary from zero to several percent. Days with no result credit nothing.
– **Settlement:** every day at 12:00 UTC. Results, rebuy modules and commissions are all booked at that settlement; a new module earns from the first settlement after the day its purchase is confirmed.
– **Module term:** a module runs until it has delivered 2× the amount put in, that amount included, then ends. It cannot be cancelled before 2× and the amount put in is not withdrawn separately. Results reach the member's app wallet, which can be withdrawn at any time (5 USDT minimum, USDT on BNB Smart Chain, gas deducted).
– **Rebuy:** for the first ten calendar days every day's result automatically opens a rebuy module with its own 2× maximum; from day 12 the member's Auto-Rebuy switch decides. Rebuy modules count as new volume for the upline.
– **Qualifying volume and ranks:** only active modules count; ranks are rechecked at every daily settlement, so a member is paid at the rank they hold that day.

Still to Confirm in Writing

– **Compression:** under the Momentum Plan the breakage differential pays the full 42% pool up the line, so nothing is left to compress; confirm this wording in the member terms.
– **Caps:** do caps also apply to own-module results? Does anything above a cap carry over?
– **Positions:** the plan pays per upline *position* — can one person hold more than one?
– **Rebuy module size:** rebuy modules open at the size of the day's result, below the 1,000 USDT minimum for a new module; confirm this exception is written into the terms.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

12 DISCLOSURES

Important Disclosures

– All rewards figures are **hypothetical arithmetic** at the engine's average daily result of 0.50–1.00% per contract. Individual days vary from zero to several percent; the figures are averages over time, not guarantees, projections or typical results.
– Member payouts and matrix rewards are paid only on **approved positive** earnings. Trading days with no profit or a loss pay nothing: no earnings, no payout, no commissions, and the average can change.
– **Modules pay out at most 2× the amount put in**, purchase price included. The module then ends and any remaining balance is kept by the DAO Treasury.
– 0.50–1.00% per day equals roughly 182–365% per year (simple), limited by the 2× module maximum. Results at this level are far above conventional financial products and carry a high risk of loss, including loss of the amount put in.
– Per the Delta One Brand Book, any figure about returns or performance requires compliance approval and its disclosure before publication.
– Programs that pay referrers from the trading results of people they enroll are regulated as securities and/or direct selling in many jurisdictions (e.g. SCA, DFSA and VARA in the UAE; SEC and FTC in the US). Confirm licensing and obtain legal review before marketing this plan.
– This guide explains the plan; it is not legal, tax or financial advice.

RANK QUALIFICATION

Line Balance Rule

The plan is built on lines of lineage. A **line** is one personally enrolled member and everyone beneath them. To qualify for a rank, no single line may count for more than a set share of the rank's qualifying volume, so every rank is built on several strong lines, not one.

Rank	Own purchase	Enrolled	Qualifying volume	Paid levels	Daily cap	Max from any one line	Most one line can count	Min. lines
1 · Fuji	1,000 USDT	2	2,000 USDT	1–3	1,000 USDT	50%	1,000 USDT	2
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	1–6	2,000 USDT	50%	2,500 USDT	2
3 · Matterhorn	6,000 USDT	4	12,000 USDT	1–9	3,000 USDT	33⅓%	4,000 USDT	3
4 · Denali	12,000 USDT	5	25,000 USDT	1–12	4,000 USDT	33⅓%	8,333 USDT	3
5 · Rainier	25,000 USDT	7	75,000 USDT	1–15	5,000 USDT	25%	18,750 USDT	4
6 · K-2	50,000 USDT	12	250,000 USDT	1–18	6,000 USDT	20%	50,000 USDT	5
7 · Everest	200,000 USDT	21	1,000,000 USDT	1–21	7,000 USDT	20%	200,000 USDT	5

All other rank requirements are unchanged. Kilimanjaro follows Fuji's 50% rule and Denali follows Matterhorn's one-third rule.

How it is counted

- Add up the volume in each line. Any line's volume above the cap counts only up to the cap.
- The counted volume must reach the rank's qualifying volume, from at least the minimum number of lines.
- Ranks 1–2: no line above 50% (two lines). Ranks 3–4: no line above one third (three lines). Rank 5: no line above 25% (four lines). Ranks 6–7: no line above 20% (five lines).

Example — qualifying for Matterhorn (12,000 USDT, max 4,000 USDT from one line)

Line	Volume in line	Counted (cap 4,000 USDT)
Line A	10,000 USDT	4,000 USDT
Line B	1,500 USDT	1,500 USDT
Line C	1,000 USDT	1,000 USDT
Total	**12,500 USDT**	**6,500 USDT — not yet qualified**

The team has 12,500 USDT of volume, but 6,000 USDT of it sits above the cap in one line. Building Lines B and C to 4,000 USDT each brings the counted total to 12,000 USDT and qualifies the rank.

Why it matters: the rule rewards leaders who build wide, stable organizations, protects ranks from resting on a single line, and keeps rank-based payouts, including the breakage differential, tied to real team breadth. Every simulation, model and figure in the partner library applies this rule.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

DELTA ONE

BREAKAGE DIFFERENTIAL

How the Momentum Plan pays leaders — 2% per level with the differential

MOMENTUM PLAN · FOR DISTRIBUTORS AND LEADERS

WHAT THIS DOCUMENT IS

How leaders are paid: the gap between your rank's entitlement and the entitlements already claimed below you, worked example by worked example.

Draft for legal and compliance review

01 SUMMARY

The Breakage Differential

The **Momentum Plan** pays a base matrix of **2% per level** on up to 21 levels, so every contract sets aside **42%** of its daily earnings for the upline. An upline is paid a level only if their rank reaches it. The part of the pool that rank reach alone would leave unpaid is **breakage** — and the **breakage differential** pays it to leaders by rank, then to the top of the line, so **the full 42% is paid out on every contract, every day**.

BASE MATRIX ALONE
10.2%
of contract earnings reach the upline by rank (model org)

WITH THE DIFFERENTIAL
41.8%
of contract earnings paid in the model org · pool 42%

TOP LEADER REWARDS
1,623,831 USDT
per month in the model org · 19.8M USDT / yr

What the plan does

	The Momentum Plan
Base matrix	2% per level, levels 1–21 by rank, daily caps 1,000–7,000 USDT by rank
Breakage	Paid to leaders by rank, then to the top leader in the line — never left unpaid
Who earns it	All ranks, Fuji to Everest
Depth	The differential follows the line upward with no level limit
Daily caps	Apply to the base matrix only; the differential is uncapped
Total paid per contract	Always 42% of its daily earnings when any ranked leader is above it
Behaviour it rewards	Out-ranking your organization and opening new lines where you are the first leader

Module terms — the 2× maximum

Contracts are purchased as **modules, starting at 1,000 USDT**. A module pays its daily earnings until the total paid out reaches **2× the amount put in** — a 1,000 USDT module pays at most 2,000 USDT. The purchase price is not refunded: the 2× is everything the module pays. When a module reaches 2× it ends, and any balance left in it is kept by the DAO Treasury. To keep earning, a member buys a new module.

Daily result	Module ends on day	Purchase price recovered by day	Total paid on 1,000 USDT	Net rewards on 1,000 USDT	Upline commissions on it end
0.50%	400	200	2,000 USDT	1,000 USDT	Day 400
0.75%	267	133	2,000 USDT	1,000 USDT	Day 267
1.00%	200	100	2,000 USDT	1,000 USDT	Day 200

Every upline commission is a share of a module's daily earnings, so it stops when that module ends. Over a module's whole life each qualified upline receives at most 4% of the purchase price, and the whole line at most 84%. Team rewards figures in this document assume the team's volume stays active — members buy new modules as old ones reach 2×. End days are at the average daily result.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

No profit, no payout, no commissions. Members and the upline are paid only on trading days that produce a profit. On a day with no profit, or a loss, no earnings are reported, the member receives nothing and no commissions are paid. Every figure in this document is hypothetical: it uses an average daily result (0.50%, 0.75% or 1.00% a day). The engine's actual days vary, some nothing and others several percent, so every figure is an average over time, not what one day pays. Runs of days without profit lower monthly rewards and push back the day a module reaches 2×.

All examples use the engine's average daily result of **0.50% per day** on a contract; individual days vary from zero to several percent, so every figure is an average over time. Differential rewards scales in direct proportion to the rate: at 1.00% per day every differential figure doubles.

02 A CONTRACT'S POOL

How a Contract's 42% Is Divided

A 10,000 USDT contract earning 0.50% per day produces **50.00 USDT per day**. The pool is 42% of that = **21.00 USDT per day**, and each level is worth 2% = **1.00 USDT**. The base matrix pays a level only to an upline whose rank reaches that deep (Fuji 3, Kilimanjaro 6 … Everest 21); the differential pays the rest.

The chain above this contract

Level	Upline rank	Rank pays to level	Base / day	Why
L1	None	—	0.00 USDT	No rank
L2	Fuji	1–3	1.00 USDT	Within depth
L3	None	—	0.00 USDT	No rank
L4	Fuji	1–3	0.00 USDT	Fuji only pays levels 1–3
L5	Kilimanjaro	1–6	1.00 USDT	Within depth
L6	None	—	0.00 USDT	No rank
L7	Matterhorn	1–9	1.00 USDT	Within depth
L8	None	—	0.00 USDT	No rank
L9	None	—	0.00 USDT	No rank
L10	Denali	1–12	1.00 USDT	Within depth
L11	Fuji	1–3	0.00 USDT	Fuji only pays levels 1–3
L12	Denali	1–12	1.00 USDT	Within depth
L13	None	—	0.00 USDT	No rank
L14	None	—	0.00 USDT	No rank
L15	Rainier	1–15	1.00 USDT	Within depth
L16	None	—	0.00 USDT	No rank
L17	None	—	0.00 USDT	No rank
L18	K-2	1–18	1.00 USDT	Within depth
L19	None	—	0.00 USDT	No rank
L20	Matterhorn	1–9	0.00 USDT	Matterhorn only pays levels 1–9
L21	None	—	0.00 USDT	No rank
L22	Everest	1–21	0.00 USDT	Beyond 21 levels

POOL (42%)
21.00 USDT
per day

PAID BY THE BASE MATRIX
7.00 USDT
14.0% of earnings

BREAKAGE → DIFFERENTIAL
14.00 USDT
67% of the pool

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

03 THE DIFFERENTIAL

How the Breakage Differential Works

Each rank carries an **entitlement** equal to its matrix depth × 2%. Climbing one rank adds 6 points.

Rank	Fuji	Kilimanjaro	Matterhorn	Denali	Rainier	K-2	Everest
Entitlement	6%	12%	18%	24%	30%	36%	42%
Gap over rank below	6%	6%	6%	6%	6%	6%	6%

Three steps on every contract, every day

- **Step 1 — Base matrix.** 2% per level to each qualified upline, levels 1–21, by rank.
- **Step 2 — Differential from breakage.** Walk up the line from the contract. The **first** upline to hold a rank higher than anyone below them in that line is paid the **gap** between their entitlement and the highest entitlement below them. Their base 2% on that contract counts toward the gap. Same-rank uplines above them earn their base 2% only — the gap is gone.
- **Step 3 — Leftover to the top.** Any breakage still unpaid goes to the highest-ranked upline in the line.
- The pool can never exceed 42%: if breakage runs out, later differentials are reduced.

In plain words: when you earn a rank, you take the breakage in your organization up to your rank's percentage — until you reach someone below you at the same or higher rank. Stay ahead of your organization in rank, and open new lines where you are the first leader.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

04 EXAMPLE 1

One Contract, Level by Level

The same 10,000 USDT contract and chain as section 02, 50.00 USDT per day earnings: base, differential and total for every ranked upline, per day, per month and per year.

Level	Rank	Base	Differential	Total / day	Per month	Per year
L2	Fuji	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L4	Fuji	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT
L5	Kilimanjaro	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L7	Matterhorn	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L10	Denali	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L11	Fuji	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT
L12	Denali	1.00 USDT	0.00 USDT	1.00 USDT	30.00 USDT	365.00 USDT
L15	Rainier	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L18	K-2	1.00 USDT	2.00 USDT	3.00 USDT	90.00 USDT	1,095.00 USDT
L20	Matterhorn	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT	0.00 USDT
L22	Everest	0.00 USDT	2.00 USDT	2.00 USDT	60.00 USDT	730.00 USDT
Total		7.00 USDT	14.00 USDT	21.00 USDT	630.00 USDT	7,665.00 USDT

- Each **first** leader at a new rank (Fuji L2, Kilimanjaro L5, Matterhorn L7, Denali L10, Rainier L15, K-2 L18) takes **6% = 3.00 USDT per day** on this contract: the base 2% plus the gap.
- The Fuji at L4, Denali at L12 and Matterhorn at L20 are **behind** a same-or-higher rank below them, so no gap.
- The Everest at L22 is outside the 21 paid levels — no base — but earns the last 2.00 USDT of breakage as the top of the line.
- The whole 42% pool (21.00 USDT a day) is paid out on this contract: 7.00 USDT by the base matrix and 14.00 USDT by the differential.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

05 EXAMPLE 2

Why You Must Stay Ahead

You are a Denali at level 5 above a 10,000 USDT contract (50 USDT/day). Below you are a Fuji (L2) and a Kilimanjaro (L4). An Everest sits above you at L9.

Case	L2	L4	You (L5)	Everest (L9)	You / month	You / year
A — You are ahead	Fuji 3.00 USDT	Kilimanjaro 3.00 USDT	Denali **6.00 USDT**	9.00 USDT	**180.00 USDT**	**2,190.00 USDT**
B — Your L4 ranks up to Denali	Fuji 3.00 USDT	Denali 9.00 USDT	Denali **1.00 USDT**	8.00 USDT	**30.00 USDT**	**365.00 USDT**
C — You advance to Rainier	Fuji 3.00 USDT	Denali 9.00 USDT	Rainier **3.00 USDT**	6.00 USDT	**90.00 USDT**	**1,095.00 USDT**

When your downline matches your rank (case B), the breakage on that leg stops at them — your rewards on that contract falls from 6.00 USDT to 1.00 USDT a day. Ranking up (case C) wins back the 6-point gap.

06 EXAMPLE 3

Why New Lines Pay More

You are a Denali (24% entitlement). You help build 1,000,000 USDT of new contracts (0.50%/day = 5,000 USDT/day in earnings). Members in the leg are unranked or Fuji (6%).

Where the 1M USDT is built	Your share	Per day	Per month	Per year
New line — you are its first leader	24% − 6% = 18%	900 USDT	27,000 USDT	328,500 USDT
Under an existing Denali in your org	Base 2% only	100 USDT	3,000 USDT	36,500 USDT
Under an existing Matterhorn (18%)	24% − 18% = 6%	300 USDT	9,000 USDT	109,500 USDT

Shares are of the leg's daily earnings, assuming all of it lies within your 12 paid levels for the base.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

07 MODEL ORGANIZATION

A 10,000-Member Organization

A simulated organization of 10,000 members and **66.88M USDT** in contracts. Members enroll 0–21 people each (55% enroll nobody); purchases range 1,000–200,000 USDT (42% at 1,000 USDT). Ranks are assigned strictly by the plan's qualifications. The top leader is a K-2 with no one above him.

Rank	Members	Base matrix / month	With differential / month	Per year	Differential share
Fuji	1,336	234 USDT	398 USDT	4,838 USDT	41%
Kilimanjaro	527	496 USDT	1,273 USDT	15,485 USDT	61%
Matterhorn	133	1,222 USDT	4,947 USDT	60,183 USDT	75%
Denali	51	1,503 USDT	8,875 USDT	107,984 USDT	83%
Rainier	5	2,858 USDT	24,772 USDT	301,399 USDT	88%
K-2	3	3,744 USDT	43,137 USDT	524,833 USDT	91%
Top leader (K-2)	1	180,000 USDT	1,623,831 USDT	19,756,611 USDT	89%
Unranked	7,944	0 USDT	0 USDT	0 USDT	—

ORG EARNINGS / MONTH
10.03M USDT
at 0.50% / day

PAID BY THE BASE MATRIX
1.02M USDT
10.2% of earnings

PAID WITH THE DIFFERENTIAL
4.19M USDT
41.8% of earnings

One simulated structure; real organizations will differ. Averages hide wide spread within each rank. 'Differential share' is the part of the rank's average rewards that comes from the differential.

08 REWARDS TARGETS

What It Takes to Earn 10K USDT, 100K USDT and 1M USDT a Month

Organization size needed for **you** to earn each monthly rewards, using the same model structure, with an Everest above you in the line. 0.50% per day; at 1.00% the volume needed roughly halves. Per year: 10K USDT / month = 121,667 USDT; 100K USDT / month = 1,216,667 USDT; 1M USDT / month = 12,166,667 USDT.

Your rank	10,000 USDT / month	100,000 USDT / month	1,000,000 USDT / month
Matterhorn	≈111 members (820,543 USDT)	≈5,960 members (40M USDT)	Not reachable
Denali	<100 members (<747,583 USDT)	≈1,402 members (9.5M USDT)	Not reachable
Rainier	<100 members (<760,583 USDT)	≈745 members (5.1M USDT)	≈12,544 members (84M USDT)
K-2	<100 members (<785,583 USDT)	≈497 members (3.5M USDT)	≈7,390 members (49.6M USDT)
Everest	<100 members (<935,583 USDT)	≈402 members (3M USDT)	≈6,071 members (41M USDT)

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

- **1,000,000 USDT / month:** an Everest needs roughly 6,071 members and 41M USDT; a K-2 about 7,390 and 49.6M USDT.
- Lower ranks hit a ceiling: Matterhorn cannot reach 1M USDT; Denali cannot reach 1M USDT in this model — their own organizations produce same-rank leaders who cut off the differential. Climbing rank is the only way to keep it.
- The differential is uncapped, so leader rewards keeps growing with the organization.

09 TIMING

From Purchase to Commission

How long it takes for new purchase volume to become commissions in the upline. The full 42% pool is paid on every contract; over a module's life (it ends at 2× the purchase price) the whole line receives 84% of the purchase price. Per-upline figures below are the 2% base rate; differential comes on top.

When commissions start

Day	What happens	Upline commission
Day 0	Purchase confirmed on BNB Smart Chain (BEP-20 USDT) and the module activated	None yet
Day 1	First daily result credited at the 12:00 UTC settlement	First commission credited to every qualified upline at the same settlement
Every profitable day	Approved positive result credited at the 12:00 UTC settlement	Paid daily, at the same settlement as the result
Day with no profit or a loss	No earnings reported; no payout to the member	No commissions that day
Day 30	One month of earnings	≈ 30 daily payments
Day 200–400	Module reaches 2× and ends (day 200 at 1.00%, day 400 at 0.50%, counting profitable days only)	Commissions on that module stop; its rebuy modules keep paying until each reaches its own 2×, and a new module starts the cycle again

Confirmed schedule: a module earns from the first 12:00 UTC settlement after the day its purchase is confirmed, and commissions are credited at the same settlement as the results they come from. Ranks are rechecked at every settlement, and only active modules count toward qualifying volume.

How fast a 10,000 USDT purchase turns into upline commissions

Contract result	Each upline / day	First 30 days	First 90 days	Module ends	Each upline, whole module
0.50% / day	1.00 USDT	30.00 USDT	90.00 USDT	Day 400	400 USDT (4% of purchase price)
0.75% / day	1.50 USDT	45.00 USDT	135.00 USDT	Day 267	400 USDT (4% of purchase price)
1.00% / day	2.00 USDT	60.00 USDT	180.00 USDT	Day 200	400 USDT (4% of purchase price)

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

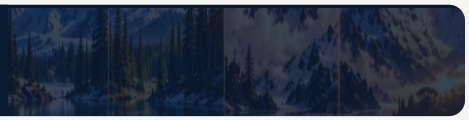

Total commissions a module pays the whole upline over its life

Contract result	Module life	Full 42% pool
0.50% / day	400 days	84% of purchase price (8,400 USDT on 10,000 USDT)
0.75% / day	267 days	84% of purchase price (8,400 USDT on 10,000 USDT)
1.00% / day	200 days	84% of purchase price (8,400 USDT on 10,000 USDT)

Commissions are a share of *earnings*, so purchase volume converts into commissions one day at a time and stops when the module reaches 2×. The return rate changes how fast this happens, not the total: a module always pays 2× the purchase price to its owner and the same share of that to the upline.

10 DAO TREASURY ECONOMICS

What the Momentum Plan Costs

Contract book	Earnings / month	Commission paid (42%)	Of the 25% budget	Left for events & promotions / month
10.00M USDT	1.50M USDT	630,000 USDT	84%	120,000 USDT
50.00M USDT	7.50M USDT	3.15M USDT	84%	600,000 USDT
100.00M USDT	15.00M USDT	6.30M USDT	84%	1.20M USDT
500.00M USDT	75.00M USDT	31.50M USDT	84%	6.00M USDT

Commission is a fixed 42% of member earnings — 21% of gross trading profit — paid from the compensation plan's 25% share. In the model organization the base matrix alone would pay 10.2%; the differential pays the rest of the pool. At 1.00% per day all USDT figures double; the shares do not change.

The 50 / 25 / 25 split

Every 100 USDT of trading profit is split three ways: **50 USDT to members** (their daily result), **25 USDT to the compensation plan** and **25 USDT to the DAO Treasury**. Commission is paid from the 25 USDT budget; any part of the budget not paid as commission funds **events and promotions**. Because members receive half of trading, commission at X% of member earnings costs X/2 USDT per 100 USDT of trading.

Case	Members	Comp plan budget	Commission paid	Budget used	Events & promotions	DAO Treasury
Momentum Plan (model org)	50.00 USDT	25.00 USDT	20.88 USDT	84%	4.12 USDT	**25.00 USDT**
Momentum Plan (full 42%)	50.00 USDT	25.00 USDT	21.00 USDT	84%	4.00 USDT	**25.00 USDT**

Per 100 USDT of trading profit. The DAO Treasury keeps its 25 USDT profit share and also receives any commission no member qualifies for; it never pays commission from its own share.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Funding: trading is stated to earn **1–2% per day**: 50% to members (the 0.50–1.00% daily result), 25% to the compensation plan and 25% to the DAO Treasury. The Momentum Plan uses at most **84% of the 25% budget**; the rest funds events and promotions. The DAO Treasury's own 25% is never used for commission. This holds only while trading actually delivers the stated results.

11 DESIGN POINTS

How the Model Resolves the Edge Cases

- **Top-of-line leftover:** under Step 3, the highest-ranked upline in a line collects what is unpaid below it; breakage that no member qualifies for stays with Delta One.
- **Unlimited depth:** the differential travels above level 21; only the base matrix stops at 21 levels.
- **The contract owner's own rank** is ignored, so a leader's personal contracts pay their upline normally.
- **No cap on the differential:** daily caps apply to the base matrix only.
- **Rank maintenance:** ranks are rechecked at every daily settlement; ties at the same rank go to the first one up the line.

12 DISCLOSURES

Important Disclosures

– All figures are **hypothetical arithmetic** on a simulated organization at the engine's average daily result of 0.50% per contract. They are averages over time, not guarantees, projections or typical results. Most members in the model earn nothing.
– Rewards are paid only on **approved positive** contract earnings.
– Trading days with no profit or a loss pay nothing: no earnings reported, no member payout, no commissions; individual days vary from zero to several percent and the average can change.
– **Modules pay out at most 2× the amount put in**, purchase price included; the module then ends and any remaining balance is kept by the DAO Treasury. Team figures assume volume stays active through rebuy and new modules.
– Per the Delta One Brand Book, any figure about returns or performance requires compliance approval and its disclosure before publication.
– Compensation funded from the trading results of members' money is regulated as securities and/or direct selling in many jurisdictions (e.g. SCA, DFSA, VARA in the UAE; SEC, FTC in the US). Obtain legal review before marketing this plan.
– This document explains the plan; it is not legal, tax or financial advice.

DELTA ONE

MOMENTUM PLAN
DISTRIBUTOR GUIDE

Every rule, the logic behind it, and worked scenarios

DISTRIBUTORS

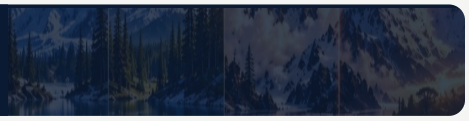

WHAT THIS DOCUMENT IS

The plan written for a distributor: every rule with the reason behind it, four worked examples, the rewards disclosure.

Draft for legal and compliance review

01 START HERE

The Momentum Plan

This guide explains every rule of the Delta One **Momentum Plan** — the compensation plan, why each rule exists, and exactly how it is calculated, with worked examples you can check line by line. Read it once from start to finish; after that, the cheat sheet and the napkin sketch are enough to explain the plan to anyone.

PAID ON EVERY LEVEL	LEADER BONUS	TOTAL PAID PER CONTRACT
2%	6% → 42%	up to 42%
of each contract's daily earnings, up to 21 levels	breakage differential by rank, uncapped	of its daily earnings, never more

The plan in five sentences

- Members purchase **modules** of the Delta One AI trading engine (software as a service). The engine trades the module's amount, and on every day trading makes a profit the module earns a daily result for its owner.
- On those same days, every **qualified upline** above that module is paid **2%** of the module's earnings for that day, as deep as their rank allows (Fuji 3 levels … Everest 21 levels).
- Leaders also earn the **breakage differential**: the gap between their rank's entitlement (6% to 42%) and the highest rank below them in that line.
- A module pays its owner at most **2× the purchase price**, then ends. Commissions on it end the same day; a new module starts the cycle again.
- No trading profit that day means **no result and no commission** for anyone.

Every number in this guide is a hypothetical illustration. Examples use the engine's average daily result of 0.50% per day on a module; individual days vary from zero to several percent, so every figure is an average over time. Real results depend on actual trading, may be lower or zero, and are not guaranteed. Capital is at risk. Rewards examples are not typical results.

02 KEY TERMS

The Words Used in This Plan

Term	Meaning
Module	A member's purchase of the Delta One AI trading engine for the amount put in, from 1,000 USDT (software as a service; the purchase price is not refundable). It receives a daily result on profitable days until it has delivered 2× the amount put in.
Daily earnings	What a module receives on one day: its share of 50% of the day's trading result. On average 0.50% of the amount. Commissions are a percentage of this, never of the purchase price.
Settlement	Every day at 12:00 UTC: results, commissions and rank checks.
Rebuy module	A new module opened from a day's result. Automatic for a module's first ten days; afterwards whenever the member's Auto-Rebuy switch is ON. Any size; own 2×; counts as new volume for the upline.
App wallet	Where a member's results land when the switch is OFF. Withdrawals any time, 5 USDT minimum, instant, gas deducted. USDT on BEP-20 only.
Profitable day	A day when trading makes a profit. Only these days produce earnings and commissions.
Upline / downline	The people above you in your sponsor line / everyone below you.
Level	Position below you: your personal enrollees are level 1, their enrollees level 2, and so on.
Line (leg)	One of your personal enrollees plus everyone beneath them. You have one line per personal enrollee.
Personal enrollment	A member you sponsored directly. Each one starts a new line.
Own purchase	The amount in your own active module(s), rebuy modules included. Each rank needs a minimum.
Qualifying volume (QV)	The amounts in the active modules in your downline, counted line by line under the line balance rule. Modules that have reached 2× no longer count.
Line balance rule	No single line may count for more than a set share of a rank's QV (50%, 33⅓%, 25% or 20%).
Rank	Fuji, Kilimanjaro, Matterhorn, Denali, Rainier, K-2, Everest. Rank sets your paid depth, entitlement and daily cap.
Base matrix	2% of each contract's daily earnings, paid to each qualified upline on levels within their paid depth.
Daily cap	The most base matrix rewards you can receive per day (1,000 USDT Fuji to 7,000 USDT Everest). It does not apply to the differential.
Entitlement	Your rank's share of each contract's earnings: 2% × your paid levels (Fuji 6% … Everest 42%).
Breakage	Matrix money not paid because an upline's rank doesn't reach that level.
Breakage differential	Breakage paid to leaders: the gap between your entitlement and the highest entitlement below you in that line.
Pool	The most any one contract can pay out in total: 42% of its daily earnings (21 levels × 2%).
Events & promotions fund	Whatever the compensation budget does not pay as commission. Spent on events and promotions.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

03 THE PRODUCT

How a Module Works

A member purchases a module (minimum 1,000 USDT on BEP-20): the Delta One AI trading engine, as software as a service, for that amount. On every profitable day the module receives its share of 50% of the day's trading result — planning case 0.50% of the amount — settled at 12:00 UTC, starting the day after the purchase is confirmed. The module keeps receiving until the total delivered reaches **2× the amount put in**, then it ends. The purchase price is not refunded separately: the 2× is everything the module delivers, so the net rewards are 1×. Any balance left when it ends is kept by the DAO Treasury.

Daily result (average)	Per day on 1,000 USDT	Per month (30 days)	Purchase price back by	Module ends on	Total paid
0.50%	5.00 USDT	150 USDT	profitable day 200	profitable day 400	2,000 USDT
0.75%	7.50 USDT	225 USDT	profitable day 133	profitable day 267	2,000 USDT
1.00%	10.00 USDT	300 USDT	profitable day 100	profitable day 200	2,000 USDT

Day counts are profitable days. Days without profit pay nothing and push the end date back.

Daily Auto-Earn and rebuy

For a module's first ten calendar days every result is automatically rebought: each day's result opens a new rebuy module with its own 2× life. On day 11 the member may withdraw that day's result; from day 12 the member's **Auto-Rebuy switch** decides every day — ON opens a rebuy module, OFF sends the result to the app wallet, from which the member can withdraw (5 USDT minimum, instant, gas deducted) or buy a new module. Every result, rebought or withdrawn, counts toward the original module's 2×.

Why this matters to you: a rebuy module is new volume, exactly like a fresh purchase. A team that leaves the switch ON grows its own qualifying volume every profitable day, and you are paid 2% per level on the rebuy modules' results as on any other. Only active modules count toward ranks, and ranks are rechecked at every settlement, so a team whose modules reach 2× without rebuying can lose rank until new modules are bought.

The Believer: 220%

A member who commits to keeping Auto-Rebuy ON for a module's entire life is a **Believer**, and the module delivers **220%** of the amount put in instead of 200%. The choice is binding: the switch cannot be turned OFF until the module has delivered its 220%; every result is rebought until then. For you, a Believer is a module that rebuys every profitable day for its whole life — steady new volume, and 2% per level on every rebuy module's results.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

04 WHERE THE MONEY COMES FROM

The 50 / 25 / 25 Split

Every 100 USDT of trading profit is shared three ways. **50 USDT** goes to members as their daily result. **25 USDT** is the compensation plan budget. **25 USDT** goes to the DAO Treasury. All commissions, including the differential, are paid from the 25 USDT budget.

Per 100 USDT of trading profit	Amount	Notes
Members' daily results	50.00 USDT	The modules' daily result (0.50% a day on average)
Commission — base matrix + differential	up to 21.00 USDT	At most 42% of the members' 50 USDT
Events and promotions fund	the rest (≥ 4.00 USDT)	Budget not paid as commission
DAO Treasury	25.00 USDT	Plus any commission no member qualifies for

Because commission is a fixed share of real profit, the plan can never pay more than its budget, and a day without profit costs the plan nothing.

05 RANKS

The Seven Ranks

Rank	Own purchase	Personal enrollments	Qualifying volume	Max from one line	Min. lines	Paid levels	Entitlement	Daily cap
1 · Fuji	1,000 USDT	2	2,000 USDT	50% (1,000 USDT)	2	1–3	6%	1,000 USDT
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	50% (2,500 USDT)	2	1–6	12%	2,000 USDT
3 · Matterhorn	6,000 USDT	4	12,000 USDT	33⅓% (4,000 USDT)	3	1–9	18%	3,000 USDT
4 · Denali	12,000 USDT	5	25,000 USDT	33⅓% (8,333 USDT)	3	1–12	24%	4,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	25% (18,750 USDT)	4	1–15	30%	5,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	20% (50,000 USDT)	5	1–18	36%	6,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	20% (200,000 USDT)	5	1–21	42%	7,000 USDT

How your rank is decided — check these three things, from Everest down; your rank is the highest one you meet in full:

– **1. Own purchase.** Your own active module(s) total at least the rank's minimum.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

– **2. Personal enrollments.** You have sponsored at least the required number of members.
– **3. Qualifying volume, counted by line.** For each line, take its volume but never more than the rank's maximum from one line. Add the lines together. The total must reach the rank's qualifying volume.

Each rank sets three things: how many levels deep you are paid (base matrix), your entitlement for the differential, and your daily cap on the base matrix.

06 LINE BALANCE RULE

The Line Balance Rule, Step by Step

A rank must be built on several lines, not one. The share of the qualifying volume that any single line can count for falls as ranks rise: 50% for Fuji and Kilimanjaro, one third for Matterhorn and Denali, 25% for Rainier and 20% for K-2 and Everest.

Target	Lines (volume in each)	Max per line	Counted	Needed	Result
Fuji	1,000 USDT, 1,000 USDT	1,000 USDT	2,000 USDT	2,000 USDT	**Qualifies**
Fuji	1,500 USDT, 500 USDT	1,000 USDT	1,500 USDT	2,000 USDT	**Not yet**
Matterhorn	5,000 USDT, 4,000 USDT, 3,500 USDT, 1,000 USDT	4,000 USDT	12,500 USDT	12,000 USDT	**Qualifies**
Matterhorn	10,000 USDT, 1,000 USDT, 1,000 USDT, 500 USDT	4,000 USDT	6,500 USDT	12,000 USDT	**Not yet — rank Kilimanjaro**
Denali	9,000 USDT, 9,000 USDT, 9,000 USDT, 1,000 USDT, 500 USDT	8,333 USDT	26,500 USDT	25,000 USDT	**Qualifies**
Denali	15,000 USDT, 5,000 USDT, 5,000 USDT, 1,000 USDT, 500 USDT	8,333 USDT	19,833 USDT	25,000 USDT	**Not yet — rank Matterhorn**
Rainier	20,000 USDT, 20,000 USDT, 20,000 USDT, 15,000 USDT, 5,000 USDT, 1,000 USDT, 1,000 USDT	18,750 USDT	78,250 USDT	75,000 USDT	**Qualifies**
Everest	200,000 USDT, 200,000 USDT, 200,000 USDT, 200,000 USDT, 200,000 USDT, 1,000 USDT, 1,000 USDT + 14 × 1,000 USDT	200,000 USDT	1,016,000 USDT	1,000,000 USDT	**Qualifies**
Everest	600,000 USDT, 100,000 USDT, 100,000 USDT, 100,000 USDT, 100,000 USDT, 100,000 USDT, 1,000 USDT, 1,000 USDT + 14 × 1,000 USDT	200,000 USDT	616,000 USDT	1,000,000 USDT	**Not yet — rank K-2**

Each example assumes the own purchase and personal enrollments are met. In the second Matterhorn example the team has 12,500 USDT of volume, but 6,000 USDT of it sits above the 4,000 USDT cap in one line, so only 6,500 USDT counts.

The fastest way up: grow your weakest qualifying lines, not your strongest. Volume above the cap in one line does nothing for your rank.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

07 BASE MATRIX

The Base Matrix: 2% Per Level

Every day a contract earns, each upline whose rank reaches that contract's level receives **2% of the contract's earnings that day**. A Fuji is paid on levels 1–3, a Kilimanjaro on 1–6, and so on to Everest on 1–21. If your rank doesn't reach a level, you receive nothing from it on the base matrix; that unpaid share is **breakage** (see section 09).

Contract	Earns per day (0.50%)	Each qualified upline / day	/ month	Over the module's life (2×)
1,000 USDT	5.00 USDT	0.10 USDT	3.00 USDT	40 USDT
5,000 USDT	25.00 USDT	0.50 USDT	15.00 USDT	200 USDT
10,000 USDT	50.00 USDT	1.00 USDT	30.00 USDT	400 USDT
50,000 USDT	250.00 USDT	5.00 USDT	150.00 USDT	2,000 USDT

Monthly shortcut

Base matrix per month ≈ **volume inside your paid levels × 0.50% × 2% × 30 = volume × 0.0003**. 1,000,000 USDT inside your paid levels pays about **3,000 USDT a month** on the base matrix, before any differential.

08 DAILY CAPS

Daily Caps

Your base matrix rewards are capped per day by rank. The cap does **not** apply to the breakage differential, which has no cap. Ranking up raises your cap.

Rank	Daily cap	Per month	Per year	Volume in paid levels that fills the cap (0.50% / day)
Fuji	1,000 USDT	30,000 USDT	365,000 USDT	10.00M USDT
Kilimanjaro	2,000 USDT	60,000 USDT	730,000 USDT	20.00M USDT
Matterhorn	3,000 USDT	90,000 USDT	1,095,000 USDT	30.00M USDT
Denali	4,000 USDT	120,000 USDT	1,460,000 USDT	40.00M USDT
Rainier	5,000 USDT	150,000 USDT	1,825,000 USDT	50.00M USDT
K-2	6,000 USDT	180,000 USDT	2,190,000 USDT	60.00M USDT
Everest	7,000 USDT	210,000 USDT	2,555,000 USDT	70.00M USDT

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

09 BREAKAGE DIFFERENTIAL

The Breakage Differential

Each rank has an **entitlement**: 2% × its paid levels. Fuji 6%, Kilimanjaro 12%, Matterhorn 18%, Denali 24%, Rainier 30%, K-2 36%, Everest 42%. On every contract, every profitable day, three steps run in order:

- **Step 1 — Base matrix.** Each upline whose rank reaches the contract's level receives 2%.
- **Step 2 — Differential.** Walk up the line from the contract. The **first** upline whose rank is higher than everyone below them in that line receives the **gap**: their entitlement minus the highest entitlement below them, less the base they already received on that contract. An upline at the same rank as, or below, someone beneath them receives only their base.
- **Step 3 — Leftover.** Anything still unpaid goes to the highest-ranked upline in the line; whatever no member qualifies for stays with Delta One.
- The total paid on a contract can never exceed 42% of its earnings. The differential has no depth limit and no cap.

Example — one 10,000 USDT contract earning 50.00 USDT on a day

Level	Upline rank	Base (2%)	Differential	Total	Why
L2	Fuji	1.00 USDT	2.00 USDT	**3.00 USDT**	First Fuji — gap 6%
L4	Fuji	0.00 USDT	0.00 USDT	**0.00 USDT**	Same or lower rank than someone below — base only
L5	Kilimanjaro	1.00 USDT	2.00 USDT	**3.00 USDT**	First Kilimanjaro — gap 6%
L7	Matterhorn	1.00 USDT	2.00 USDT	**3.00 USDT**	First Matterhorn — gap 6%
L10	Denali	1.00 USDT	2.00 USDT	**3.00 USDT**	First Denali — gap 6%
L11	Fuji	0.00 USDT	0.00 USDT	**0.00 USDT**	Same or lower rank than someone below — base only
L12	Denali	1.00 USDT	0.00 USDT	**1.00 USDT**	Same or lower rank than someone below — base only
L15	Rainier	1.00 USDT	2.00 USDT	**3.00 USDT**	First Rainier — gap 6%
L18	K-2	1.00 USDT	2.00 USDT	**3.00 USDT**	First K-2 — gap 6%
L20	Matterhorn	0.00 USDT	0.00 USDT	**0.00 USDT**	Same or lower rank than someone below — base only
L22	Everest	0.00 USDT	2.00 USDT	**2.00 USDT**	Everest — takes the remaining gap and leftover
Total		7.00 USDT	14.00 USDT	**21.00 USDT**	= 42% of 50.00 USDT

Unranked members in the line (levels not shown) receive nothing. The whole 42% pool is paid out on this contract.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Why you must stay ahead

Case (you are at level 5, a 10,000 USDT contract, 50 USDT a day)	Your rank	You / day	You / month
You are ahead	Denali	6.00 USDT	180.00 USDT
Your level-4 member ranks up to Denali	Denali	1.00 USDT	30.00 USDT
You advance to Rainier	Rainier	3.00 USDT	90.00 USDT

When someone below you matches your rank, the gap on their part of the line is theirs, not yours. Ranking up wins it back. This is why the plan rewards growing your own rank ahead of your organization.

Why new lines pay more

A Denali (24% entitlement) helps build 1,000,000 USDT earning 5,000 USDT a day	Your share	Per day	Per month
In a new line where you are the first leader (members unranked or Fuji)	24% − 6% = 18%	900 USDT	27,000 USDT
Under a Matterhorn (18%) in your organization	24% − 18% = 6%	300 USDT	9,000 USDT
Under another Denali in your organization	Base 2% only	100 USDT	3,000 USDT

Assumes all of the volume sits inside your 12 paid levels for the base.

10 SCENARIOS

Putting It Together: Four Scenarios

Each scenario is a complete small organization calculated with the same engine used for every figure in the Delta One library: ranks are assigned by the rules above (including the line balance rule), every module earns 0.50% a day, and commissions are split contract by contract.

Scenario A — Your first rank: Fuji

You buy a 1,000 USDT module and enroll two people, Ann and Ben, who each buy 1,000 USDT. Two lines of 1,000 USDT meet Fuji's 2,000 USDT qualifying volume with no line above 50%.

Member	Sponsor	Own purchase	Rank	Base / month	Differential / month	Total / month
You	Delta One	1,000 USDT	Fuji	6.00 USDT	12.00 USDT	**18.00 USDT**
Ann	You	1,000 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT
Ben	You	1,000 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT

Your lines: Ann line 1,000 USDT; Ben line 1,000 USDT. Counted for Fuji: 2,000 USDT (max 1,000 USDT per line) against 2,000 USDT needed. Your own module also earns 150 USDT a month as a member result (until it reaches 2×).

Your 6% Fuji entitlement on Ann's and Ben's earnings is paid as 2% base plus a 4% differential, because no one below you holds a rank.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Scenario B — Building to Matterhorn

You hold a 6,000 USDT module and four personal enrollees whose lines have grown. Matterhorn needs 12,000 USDT with no line counting for more than 4,000 USDT.

Member	Sponsor	Own purchase	Rank	Base / month	Differential / month	Total / month
You	Delta One	6,000 USDT	Matterhorn	40.50 USDT	284 USDT	**324 USDT**
Amy	You	2,500 USDT	Fuji	7.50 USDT	15.00 USDT	22.50 USDT
Bo	You	2,000 USDT	Fuji	6.00 USDT	12.00 USDT	18.00 USDT
Cy	You	2,500 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT
Di	You	1,000 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT

Your lines: Amy line 5,000 USDT; Bo line 4,000 USDT; Cy line 3,500 USDT; Di line 1,000 USDT. Counted for Matterhorn: 12,500 USDT (max 4,000 USDT per line) against 12,000 USDT needed. Your own module also earns 900 USDT a month as a member result (until it reaches 2×).

Amy and Bo have each reached Fuji in their own lines, so on their lines your differential is the gap from 6% to your 18%.

Scenario C — The same team, one heavy line

Same 13,500 USDT of team volume as Scenario B, but 10,000 USDT of it is in Amy's line. Only 4,000 USDT of that line counts toward Matterhorn, so you qualify only as Kilimanjaro.

Member	Sponsor	Own purchase	Rank	Base / month	Differential / month	Total / month
You	Delta One	6,000 USDT	Kilimanjaro	40.50 USDT	202 USDT	**243 USDT**
Amy	You	10,000 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT
Bo	You	1,500 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT
Cy	You	1,500 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT
Di	You	500 USDT	Unranked	0.00 USDT	0.00 USDT	0.00 USDT

Your lines: Amy line 10,000 USDT; Bo line 1,500 USDT; Cy line 1,500 USDT; Di line 500 USDT. Counted for Kilimanjaro: 6,000 USDT (max 2,500 USDT per line) against 5,000 USDT needed. Your own module also earns 900 USDT a month as a member result (until it reaches 2×).

Compare with Scenario B: balanced lines earn the higher rank, deeper pay and the larger differential.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Scenario D — A Denali with five lines

You hold 12,000 USDT and have five lines, each led by a member with 2,500 USDT who has enrolled four people. Three of those lines go one level deeper.

Member	Sponsor	Own purchase	Rank	Base / month	Differential / month	Total / month
You	Delta One	12,000 USDT	Denali	116 USDT	875 USDT	**990 USDT**
A-lead	You	2,500 USDT	Kilimanjaro	18.00 USDT	72.00 USDT	90.00 USDT
A-4	A-lead	1,000 USDT	Fuji	6.00 USDT	12.00 USDT	18.00 USDT
B-lead	You	2,500 USDT	Kilimanjaro	18.00 USDT	72.00 USDT	90.00 USDT
B-4	B-lead	1,000 USDT	Fuji	6.00 USDT	12.00 USDT	18.00 USDT
C-lead	You	2,500 USDT	Kilimanjaro	18.00 USDT	72.00 USDT	90.00 USDT
C-4	C-lead	1,000 USDT	Fuji	6.00 USDT	12.00 USDT	18.00 USDT
D-lead	You	2,500 USDT	Fuji	12.00 USDT	24.00 USDT	36.00 USDT
E-lead	You	2,500 USDT	Fuji	12.00 USDT	24.00 USDT	36.00 USDT

Your lines: A-lead line 8,500 USDT; B-lead line 8,500 USDT; C-lead line 8,500 USDT; D-lead line 6,500 USDT; E-lead line 6,500 USDT. Counted for Denali: 38,000 USDT (max 8,333 USDT per line) against 25,000 USDT needed. Your own module also earns 1,800 USDT a month as a member result (until it reaches 2×).

Your lines are balanced: 38,000 USDT of your 38,500 USDT counts toward Denali, well above the 25,000 USDT needed. Three of your line leaders are Kilimanjaro, so on those lines your differential is the gap from 12% to your 24%. Next step: Rainier needs a 25,000 USDT own purchase, seven enrollments and 75,000 USDT with no line above 25%.

11 RULES

Every Rule in One Place

Rule	Detail
Commission base	Commissions are a percentage of a contract's approved daily earnings — never of a purchase.
Profitable days only	No trading profit on a day means no member result and no commission that day.
Base rate	2% of the contract's daily earnings to each qualified upline, per level.
Paid depth	Fuji 1–3, Kilimanjaro 1–6, Matterhorn 1–9, Denali 1–12, Rainier 1–15, K-2 1–18, Everest 1–21.
Daily cap	Applies to base matrix rewards only, per day, by rank (1,000–7,000 USDT).
Entitlement	2% × paid levels: 6%, 12%, 18%, 24%, 30%, 36%, 42%.
Differential	Paid to the first upline in a line whose rank exceeds everyone below; gap = own entitlement − highest entitlement below − own base on that contract. Uncapped; no depth limit.
Same rank	An upline at the same rank as someone below them in that line receives base only on that contract (first one up wins).
Leftover	Any unpaid part of the 42% pool goes to the highest-ranked upline in the line; what no member qualifies for stays with Delta One.
Pool limit	Total commission on a contract never exceeds 42% of its earnings.
Rank requirements	Own purchase + personal enrollments + qualifying volume counted under the line balance rule.
Line balance rule	Max share of QV from one line: 50% (ranks 1–2), 33⅓% (3–4), 25% (5), 20% (6–7).
Contract owner	The owner of a contract is not paid commission on their own contract; they receive its member result.
Module cap	A module delivers at most 2× the amount put in, then ends; commissions on it end the same day.
Rebuy modules	Opened from a day's result (first ten days automatically, then by the member's switch). Any size, own 2×, count as new volume and pay commission like any module.
Believer	A member who commits to Auto-Rebuy ON for a module's entire life; the module delivers 220% instead of 200%, and the switch is locked ON until then.
Active modules only	Qualifying volume counts active modules only; ranks are rechecked at every 12:00 UTC settlement.
Settlement and payment	Results and commissions are calculated and paid every day at 12:00 UTC, in USDT, to the member's app wallet.
Networks and withdrawals	USDT on BEP-20 only. Withdrawals from the app wallet any time, 5 USDT minimum, sent instantly, gas deducted. No other fees.
Funding	All commission comes from the 25% compensation budget; the remainder funds events and promotions.

To be confirmed in the final plan terms

- Whether a member's own module result is subject to any cap (assumed: no).
- Whether commission earned is itself subject to the Auto-Rebuy switch or always lands in the app wallet (assumed: app wallet).

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

– When the Believer choice can be made (assumed: at purchase or when the switch becomes available on day 11), and whether rebuy modules opened by a Believer also run to 220% (assumed: yes).

12 QUESTIONS

Frequently Asked Questions

Am I paid on purchases?

No. Every commission is a percentage of a contract's daily earnings. A 10,000 USDT purchase earning 50 USDT on a day pays each qualified upline 1.00 USDT that day, not 2% of 10,000 USDT.

What happens on a day with no trading profit?

Nothing is paid to anyone: no member result, no base matrix, no differential.

When am I paid?

Every day at 12:00 UTC, in USDT, into your app wallet. Withdraw any time from 5 USDT; it is sent instantly with the gas fee deducted.

Do rebuy modules pay me commission?

Yes. A rebuy module is a module: its results pay 2% per level like any other, and it adds to your qualifying volume.

Can I lose a rank?

Yes. Only active modules count, and ranks are rechecked at every settlement. When modules in your lines reach 2× and are not replaced, your qualifying volume falls.

Do I need a rank to earn commission?

Yes. Unranked members receive their own module's results only. Fuji is the first rank.

What counts as a line?

Each person you personally enroll starts one line. Everyone they enroll, and everyone below that, is in the same line.

Does my own purchase count toward qualifying volume?

No. Your own purchase is checked separately against the rank's own-purchase minimum. Qualifying volume is your downline, counted by line.

Why does a big line not get me a rank?

Because of the line balance rule, a single line can only count up to 50%, 33⅓%, 25% or 20% of the rank's qualifying volume. Build other lines.

What is the difference between the base matrix and the differential?

The base matrix pays 2% per level within your paid depth and is capped daily. The differential pays leaders the gap between their entitlement and the rank below them, has no cap and no depth limit.

Can someone I enrolled out-earn me?

Yes. If they outrank you or build more volume, they can. When they match your rank, the differential on their part of the line becomes theirs.

Is there a limit to what I can earn?

The base matrix is capped daily by rank. The differential is uncapped. In total, no contract ever pays more than 42% of its earnings to the whole line.

What happens when a module reaches 2×?

It ends. The owner stops receiving results and the upline stops receiving commissions on it the same day; it stops counting toward qualifying volume. Rebuy modules opened from it keep running to their own 2×.

What is a Believer?

A member who commits to keeping Auto-Rebuy ON for a module's whole life. The module delivers 220% instead of 200%, and the switch is locked ON until then — so every one of its results becomes new volume in your line.

Who receives commission no one qualifies for?

It flows up the line as breakage and differential, and anything left goes to the highest-ranked upline. Commission no member qualifies for stays with Delta One.

Where does the money for commission come from?

From the 25% compensation budget of each day's trading profit. Whatever commission doesn't use goes to the events and promotions fund.

Are results or rewards guaranteed?

No. Results depend on real trading and may be lower or zero. Most members in the model earn no commission at all.

13 WORKSHEET

Work Out Your Own Numbers

Use these steps with your own organization. Use your actual average daily result; the examples use 0.50%.

Step	What to do	Example
1	List each line: the name of your personal enrollee and the total purchases in that line.	Amy 5,000 USDT · Bo 4,000 USDT · Cy 3,500 USDT · Di 1,000 USDT
2	Pick the rank you are checking. Cap each line at that rank's max from one line.	Matterhorn: cap 4,000 USDT → 4,000 + 4,000 + 3,500 + 1,000
3	Add the capped lines. Compare with the rank's qualifying volume. Check own purchase and enrollments.	12,500 USDT ≥ 12,000 USDT · own 6,000 USDT ✓ · 4 enrollments ✓ → Matterhorn
4	Base matrix: purchases inside your paid levels × daily result × 2%. Cap at your daily cap.	13,500 USDT × 0.50% × 2% = 1.35 USDT a day
5	Differential: for each line, purchases × daily result × (your entitlement − highest entitlement below you in that line) − your base on them.	Lines with a Fuji leader: 18% − 6% = 12% · lines without: 18%
6	Add base + differential and multiply by profitable days.	≈ 324 USDT a month (Scenario B)

Step 5 is approximate when your lines have several ranked leaders at different depths; the plan calculates it exactly, contract by contract, as in section 09.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

14 REWARDS DISCLOSURE

What Members Actually Earn in the Model

A simulated organization of 10,000 members at 0.50% per day, ranks assigned by the rules in this guide. These are model averages, not typical or expected results.

Rank	Members	Share of members	Average commission / month	Average / year
Unranked	7,944	79.4%	0 USDT	0 USDT
Fuji	1,336	13.4%	398 USDT	4,838 USDT
Kilimanjaro	527	5.3%	1,273 USDT	15,485 USDT
Matterhorn	133	1.3%	4,947 USDT	60,183 USDT
Denali	51	0.5%	8,875 USDT	107,984 USDT
Rainier	5	0.1%	24,772 USDT	301,399 USDT
K-2	3	0.0%	43,137 USDT	524,833 USDT

Most members earn nothing from the plan. In this model 79% of members hold no rank and receive no commission; they receive only their own module's results. Rewards depends on building and keeping an organization, and on trading actually producing a profit. Results are not guaranteed, capital is at risk, and every module ends at 2×. This guide is a draft that requires legal and compliance approval before distribution.

MOMENTUM PLAN · CHEAT SHEET

The Plan on One Page

EVERY LEVEL	LEADER DIFFERENTIAL	MODULE
2%	6% → 42%	2× max
of each contract's daily earnings	by rank, no cap	then it ends · from 1,000 USDT

Rank	Own purchase	Enrolled	Qualifying volume	Max per line	Paid levels	Entitled	Daily cap
1 · Fuji	1,000 USDT	2	2,000 USDT	50% · 2+ lines	1–3	6%	1,000 USDT
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	50% · 2+ lines	1–6	12%	2,000 USDT
3 · Matterhorn	6,000 USDT	4	12,000 USDT	33⅓% · 3+ lines	1–9	18%	3,000 USDT
4 · Denali	12,000 USDT	5	25,000 USDT	33⅓% · 3+ lines	1–12	24%	4,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	25% · 4+ lines	1–15	30%	5,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	20% · 5+ lines	1–18	36%	6,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	20% · 5+ lines	1–21	42%	7,000 USDT

How you are paid — three steps on every contract, every profitable day

	What	How much
1	Base matrix	2% of the contract's earnings, on every level your rank reaches · capped daily
2	Breakage differential	Your entitlement minus the highest rank below you in that line · uncapped
3	Leftover	Anything unpaid goes up the line; unclaimed commission stays with Delta One

Five rules to remember

- **Paid on earnings, never on purchases.** 10,000 USDT earning 50 USDT a day pays each qualified upline 1.00 USDT a day.
- **No profit, no payout.** A day without trading profit pays nobody.
- **Balance your lines.** One line counts for at most 50% / 33⅓% / 25% / 20% of a rank's volume.
- **Stay ahead.** When someone below you matches your rank, their part of the gap is theirs.
- **Modules end at 2×.** Commissions on a module stop when it ends; new modules restart the cycle.

Quick math (0.50% a day)

	Per day	Per month
1,000 USDT module — its owner	5.00 USDT	150 USDT (until 2,000 USDT is paid)
10,000 USDT contract — each qualified upline (base)	1.00 USDT	30 USDT
1,000,000 USDT in your paid levels — base matrix	100 USDT	3,000 USDT
1,000,000 USDT in a new line you lead as Denali — differential	900 USDT	27,000 USDT

Every 100 USDT of trading profit: 50 USDT to members · 25 USDT compensation budget (commission up to 21 USDT, the rest to events and promotions) · 25 USDT to the DAO Treasury. Illustration at the engine's average daily result of 0.50% a day (days vary from zero to several percent); results are not guaranteed, capital is at risk, most members earn no commission. Draft — requires compliance approval before use.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

DISTRIBUTOR CARD · THE FIVE-MINUTE CONVERSATION

The Five-Minute Conversation

Say less. Show one thing. Send one thing. The documents do the explaining; you only open the door and keep it honest. Read each line as it is written — the words are the house words.

Minute	What you say	Why
1 · Open	"I use a software product that trades digital money for me. Can I show you how it works in five minutes, and then send you the plain-words guide? If it is not for you, that is fine."	Permission first. No pitch, no pressure.
2 · What it is	"You buy a **module** of the Delta One AI trading engine, from 1,000 USDT, paid in USDT. The engine trades; your module gets its share of each day's trading result, every day at twelve noon UTC."	A purchase of software, never a deposit.
3 · The number	"On average about 0.50% a day. On a 1,000 USDT module that is about 5 USDT a day. Some days nothing, some days more. It is an average over time, never a promise."	Say 'average' every time you say a number.
4 · The two rules	"Every module delivers at most 2× its price, price included — on 1,000 USDT, 2,000 USDT — and then it ends. The price itself is not refundable; only results can be withdrawn. So only use money you can afford to lose."	The cap and the lock, before any excitement.
5 · The ask	"Shall I send you the plain-words guide and the five-minute cartoon? Read them, then tell me your questions." Then stop talking.	The documents and the cartoon close, not you.

Say it this way, not that way

Say	Never say	Say	Never say
purchase, module, price	deposit, invest, capital	result, daily result, rewards	return, interest, yield, ROI
rebuy, Auto-Rebuy	reinvest, compound, roll over	on average · not a promise	guaranteed, safe, fixed
it ends at 2× (2.2× for a Believer)	it keeps paying	commission, from the plan's own share	passive income, residual, bonus

Send next (all free on the Delta One site)

- **The Plan in Simple Words** and **Module Key Facts** — one idea per page, in 20 languages.
- **The Seed Farm** cartoon (five minutes) and, if they ask about rebuying, **I'm a Believer**.
- **The Module Calculator** — any size, any average, the price-back and 2× dates.

Three things you never do

- **No income claims.** Not about modules, not about the plan. Most members earn no commission at all.
- **No promises.** Days vary from zero to several percent; the average can change; nothing is guaranteed by anyone.
- **No pressure.** If they need the money, or an answer today, the answer is no — and that is a good outcome.

Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations at the engine's average daily result, not guarantees or typical results. Capital is at risk.

KEY FACTS · THE BELIEVER CHOICE · READ BEFORE YOU CHOOSE

Believer — Key Facts and Risks

Feature	Details
What a Believer is	A member who keeps the Auto-Rebuy switch **ON for the whole life of a module**: every day's result buys a small new module instead of going to the wallet.
What it changes	The module delivers **220% instead of 200%** — on 1,000 USDT, 2,200 USDT instead of 2,000 USDT, price included.
Binding	Chosen when you buy. The switch stays ON until the module has delivered its 220%; until then nothing from that module can be taken out.
What rebuy means	Each result opens a small rebuy module with its own 2.2× cap. Modules make results, results make modules — the snowball. Slow at first, then faster.
When it ends	At the average the original module delivers its 2,200 USDT by about **day 440** and stops; from then on only the rebuy modules earn.
Who it is for	People who can wait, do not need the results along the way, and trust an average over a long time.
Who it is not for	Anyone who may need the money or wants results every day — a standard module (switch OFF from day 11) is right then.
Commissions	Optional plan for introducing others, paid from a separate share. Most members earn none.

1,000 USDT module at the average daily result (0.50% a day) — three ways

	Standard — switch OFF from day 11	Believer — the original module	Believer — the whole snowball (rebuying to day 440, then OFF)
Price back	about day 200	about day 200 (all of it rebought)	nothing out until the end
The original ends	day 400 — 2,000 USDT delivered	day 440 — 2,200 USDT delivered	day 440 — 2,200 USDT delivered
Rebuy modules	the ten from days 1–10	every result, 2.2× each	440 at work on day 440 (7,976 USDT)
In the wallet at the end	2,051 USDT by day 411	nothing until the snowball is switched OFF	11,771 USDT by day 881

Main risks

- **You can lose some or all of your money**; as a Believer nothing comes out until the module has delivered its 220%. The 20% is nice; the snowball is the big one, and it needs the whole time.
- **Daily results vary widely**, from nothing to several percent, and the average can fall; long periods with low or no results are possible — a Believer waits through them.
- **Every rebuy module is a new purchase** with the same rules: not refundable, at most 2.2×, nothing on no-profit days. Exchanges, custodians or the network can fail; USDT can lose its peg; regulators may restrict this product.

Only choose Believer with money you can afford to lose entirely and will not need for a long time. Draft for legal and compliance review. Not an offer. Hypothetical illustrations at the engine's average daily result, not guarantees or typical results. Capital is at risk.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Delta One Momentum Plan — the whole plan on a napkin

0.50% a day average · illustration

1 Buy a module

Half of the 2× is your own purchase price coming back.
Want more? Buy a new module — the cycle restarts.

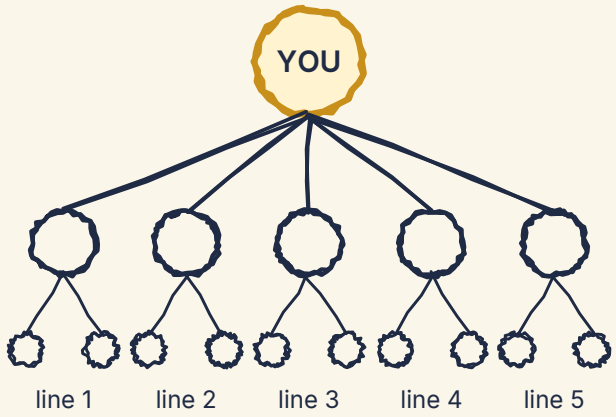

No trading profit that day = nobody is paid.

2 Every 100 USDT of trading profit

what commission doesn't use → events & promotions

3 Build balanced lines

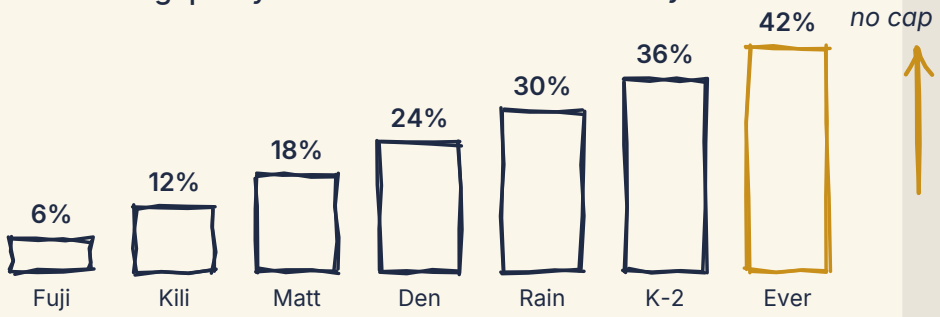

no single line
counts for more than:

50%	Fuji · Kili
33⅓%	Matt · Denali
25%	Rainier
20%	K-2 · Everest

4 Get paid two ways

a) 2% of every contract's daily earnings,
on every level your rank reaches (3 → 21)

b) the leader gap — your % minus the rank below you

Paid on earnings, never purchases · max 42% of a contract's earnings in total · illustration only — not guaranteed, capital at risk

DELTA ONE

THE PLAN IN SIMPLE WORDS

MEMBERS · CUSTOMER EDITION · OCTOBER 2026

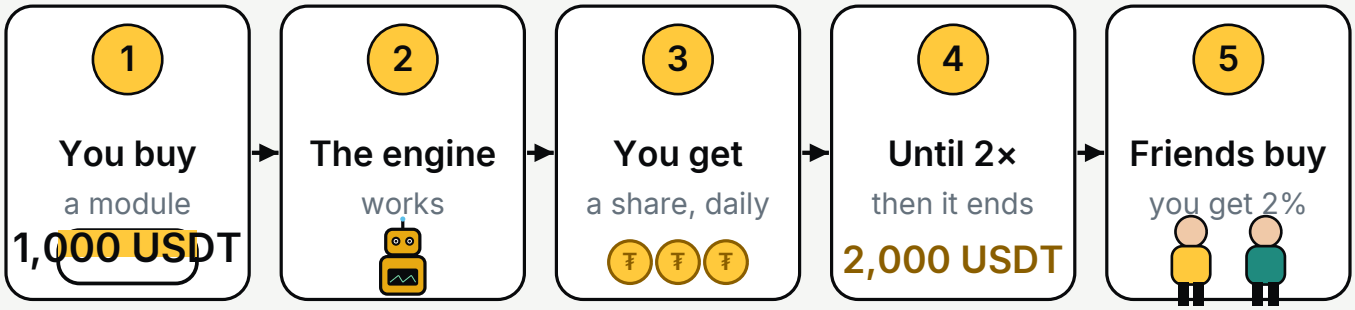

WHAT THIS DOCUMENT IS

The plan in pictures and very short sentences. Anyone can read it.

Draft for legal and compliance review

THE WHOLE PLAN · ONE PICTURE

The plan in one picture

Every day at 12:00 UTC the money goes to your app wallet.

All numbers are an average. No profit = no money that day. Nothing is promised.

Delta One has a trading engine. It is software.

You buy a piece of it. This is called a **module**.

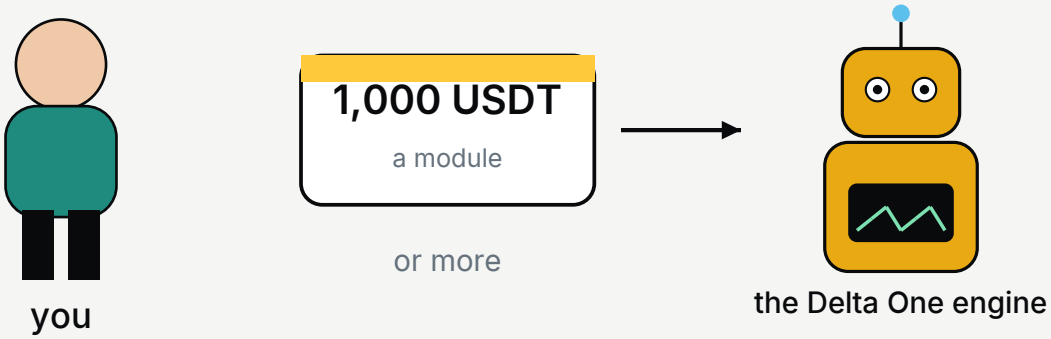

When the engine makes money, your module gets a share. Every day.

If your friends buy modules too, you get a small share of theirs.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

1 · WHAT YOU BUY

You buy a module

You pay in USDT (a digital dollar). You get a module of the engine.

A module is a piece of the engine. It is **software**. Like buying a program.

The smallest module is **1,000 USDT**. You can buy more.

It is **not** a bank. It is **not** a deposit. The 1,000 USDT does **not** come back by itself.

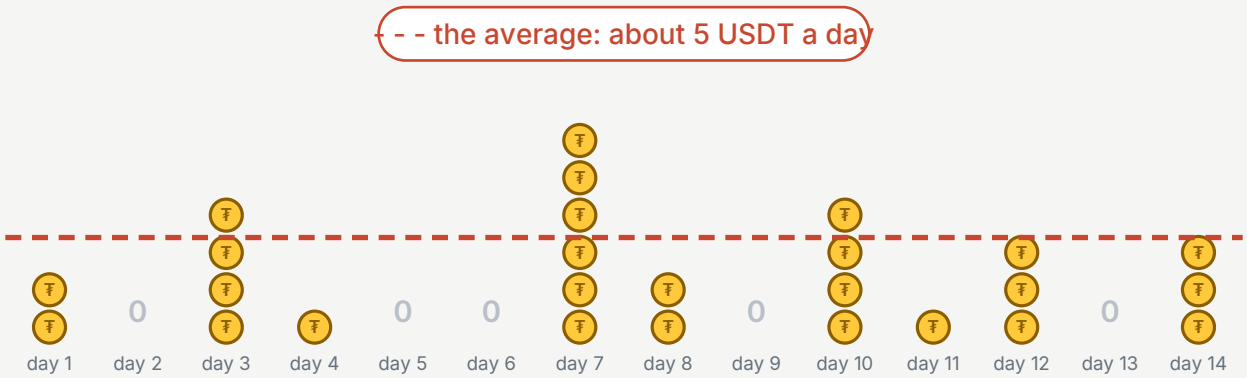

Only pay what you can afford to lose.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

2 · WHAT YOU GET

Your module gets a share, every day

A 1,000 USDT module. Some days 0 USDT. Some days more.

0.5% a day is the average. It is not a promise. It can change.

Every day the engine makes money, your module gets a part of it.

On a 1,000 USDT module this is **about 5 USDT a day**. On average.

Some days: **0 USDT**. Some days: more. Add all days, then divide: about 5 USDT.

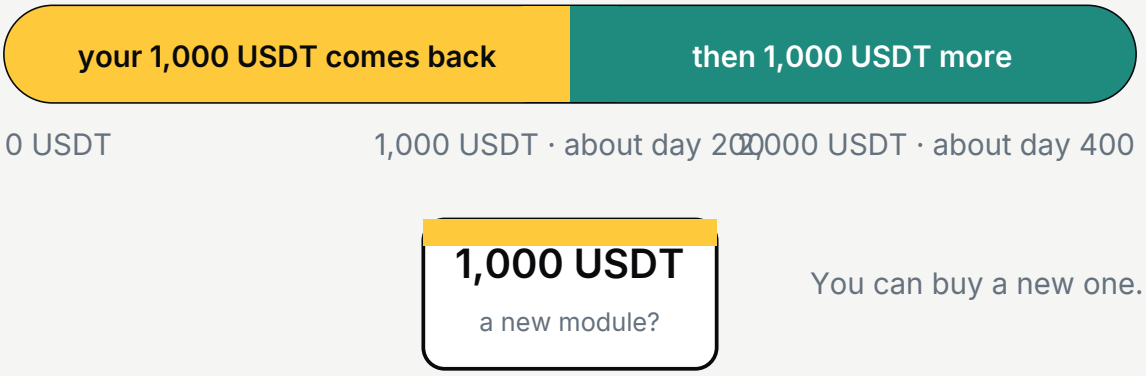

Nobody can promise a number. Never.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

3 · WHEN IT STOPS

It pays until 2×. Then it ends.

The module stops at 2× = 2,000 USDT on 1,000 USDT

Your module pays until you have received **2 times** what you paid.

1,000 USDT module → you receive 2,000 USDT in total. Then the module ends.

The first 1,000 USDT is your own money coming back. The second 1,000 USDT is rewards.

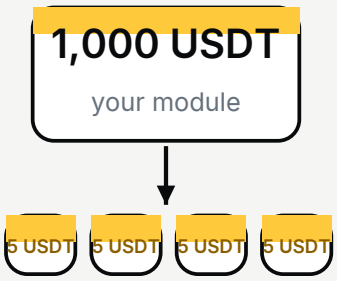

At the average this takes about **400 days**. Slower if the average is lower.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

4 · THE FIRST DAYS AND THE SWITCH

First 10 days: automatic. Then you choose.

Days 1 to 10
automatic

each 5 USDT buys a tiny new module

From day 11: you choose

REBUY: buy more modules

WALLET: keep the money

Days 1 to 10: each day's money buys a **tiny new module**. Automatic. These also pay until 2×.

From day 11 you have a **switch**.

REBUY: the money buys more modules. **WALLET**: the money goes to your app wallet.

From the wallet you can take money out any time. 5 USDT minimum. Only the network fee.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

5 · THE BELIEVER

Keep the switch on REBUY all the time: get 2.2×

REBUY, locked

Normal: 2×

1,000 → 2,000 USDT

Believer: 2.2×

1,000 → 2,200 USDT

A Believer cannot turn the switch OFF until 2.2× is reached.

You can choose to be a **Believer**.

A Believer keeps the switch on REBUY for the whole life of the module.

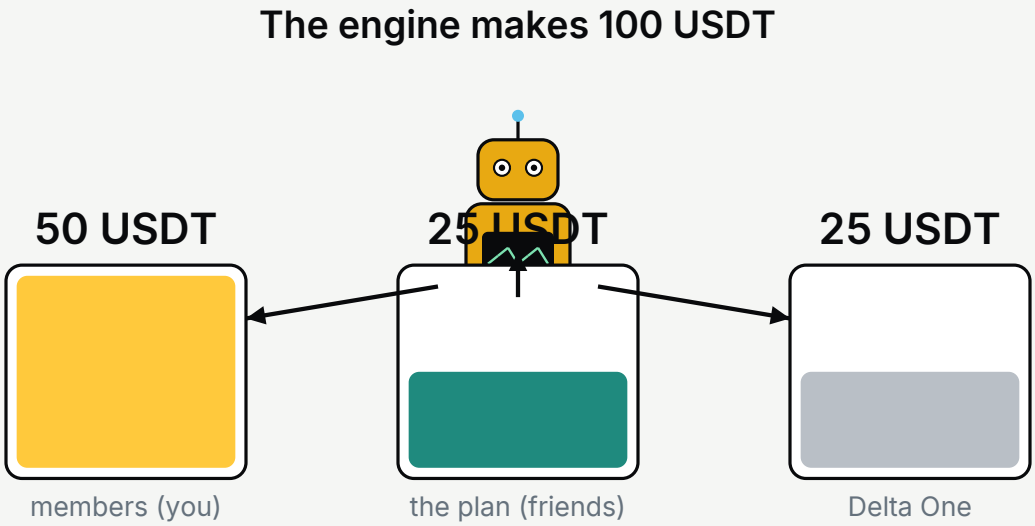

Then the module pays **2.2 times**: 2,200 USDT on 1,000 USDT. Not 2,000 USDT.

But you cannot change your mind. The switch is locked until 2.2×.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

6 · WHERE THE MONEY GOES

Every 100 USDT the engine makes

50 USDT goes to the members. This is the daily share for your module.

25 USDT goes to the plan. This pays people who brought friends.

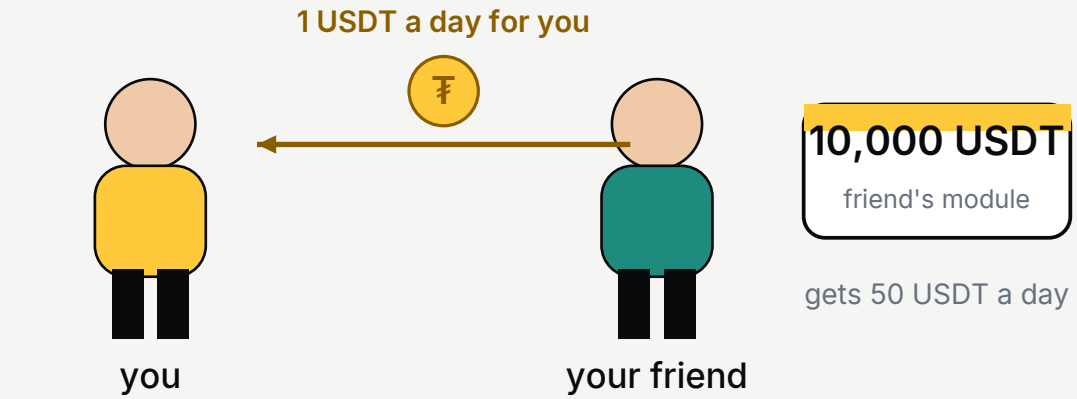

25 USDT goes to Delta One.

No money made that day? Then nobody gets anything. Not you, not your friends, not Delta One.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

7 · TELL A FRIEND

Your friend buys a module. You get 2%.

2% of what your friend's module gets. Every day. Small, on purpose.

If you tell a friend, and the friend buys a module, you get **2%** of what the friend's module gets. Every day.

Friend's module: 10,000 USDT. It gets 50 USDT a day. You get **1 USDT a day**.

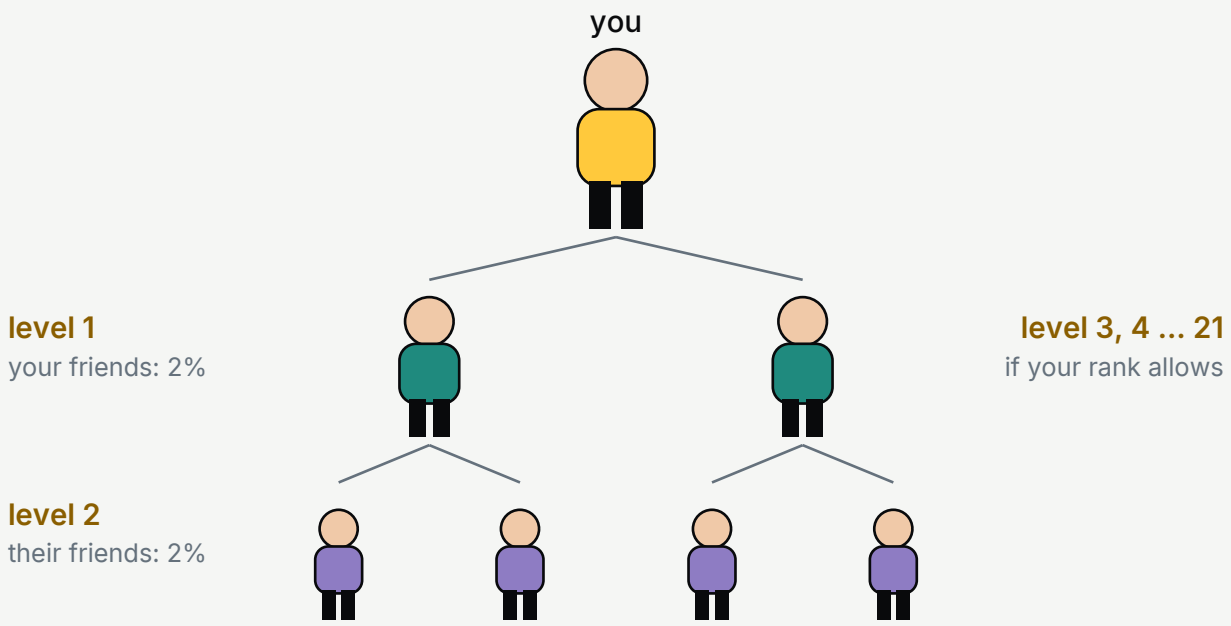

This is small. Many friends make it bigger. 1,000,000 USDT of modules under you = 100 USDT a day.

Most people never bring friends and get 0 USDT from this. That is OK.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

8 · LEVELS

Friends of friends too: up to 21 levels

Your friend is **level 1**. Your friend's friends are **level 2**. And so on.

Each level can pay you 2% of what those modules get.

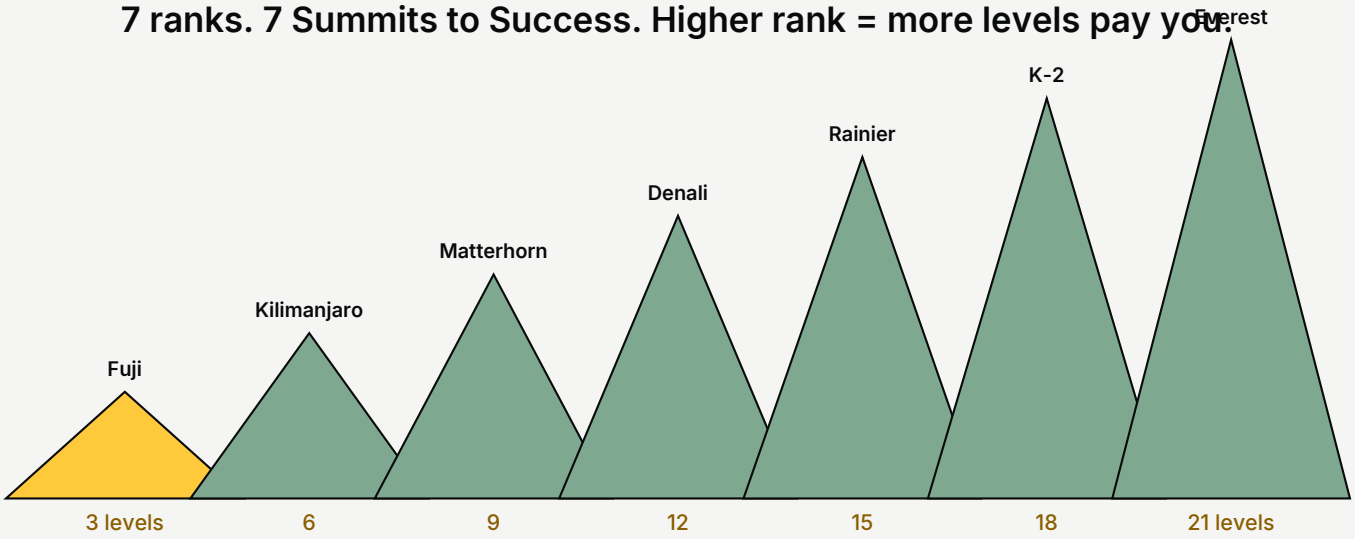

How many levels pay you? That depends on your **rank**. 3 levels at the start. Up to 21 at the top.

All levels together can never be more than 42% of what a module gets.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

9 · RANKS

Seven ranks, named after mountains

To climb you need 3 things: your own module · friends you brought · your team's modules

Fuji: 1,000 USDT module · 2 friends · 2,000 USDT team Everest: 200,000 USDT · 21 friends · 1,000,000 USDT team

Every rank needs 3 things: **your own module**, **friends you brought**, and **your team's modules**.

First rank, Fuji: 1,000 USDT module, 2 friends, 2,000 USDT in your team. You are paid on 3 levels.

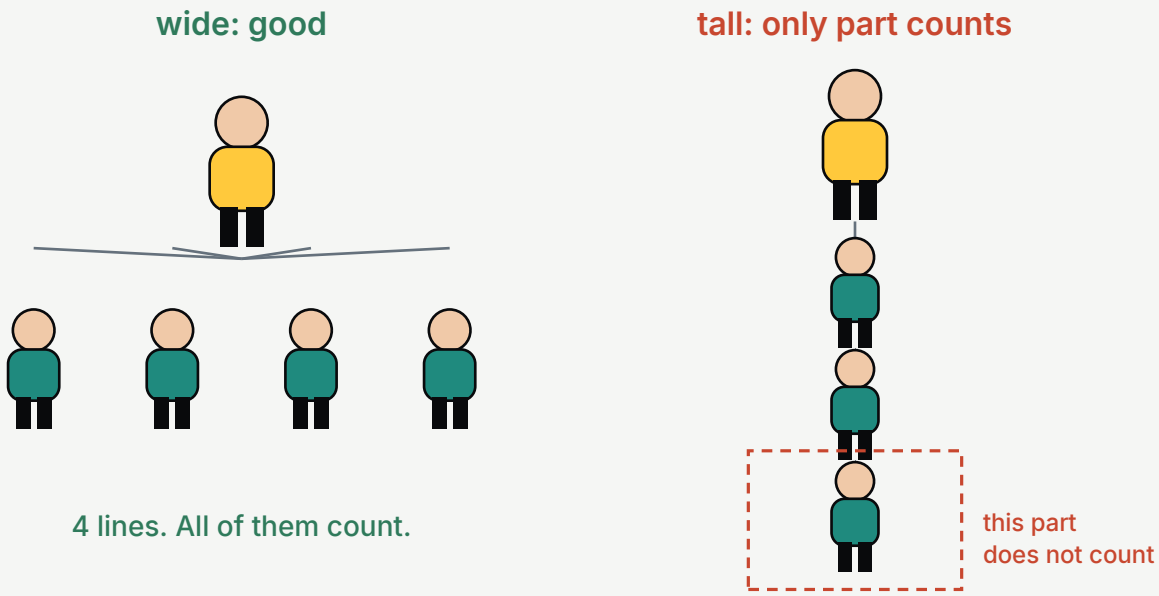

Top rank, Everest: 200,000 USDT module, 21 friends, 1,000,000 USDT in your team. Paid on 21 levels.

Your rank is checked **every day**. Only modules that are still running count.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

10 · BUILD WIDE

Many lines, not one tall line

A **line** is one friend you brought, plus everyone under that friend.

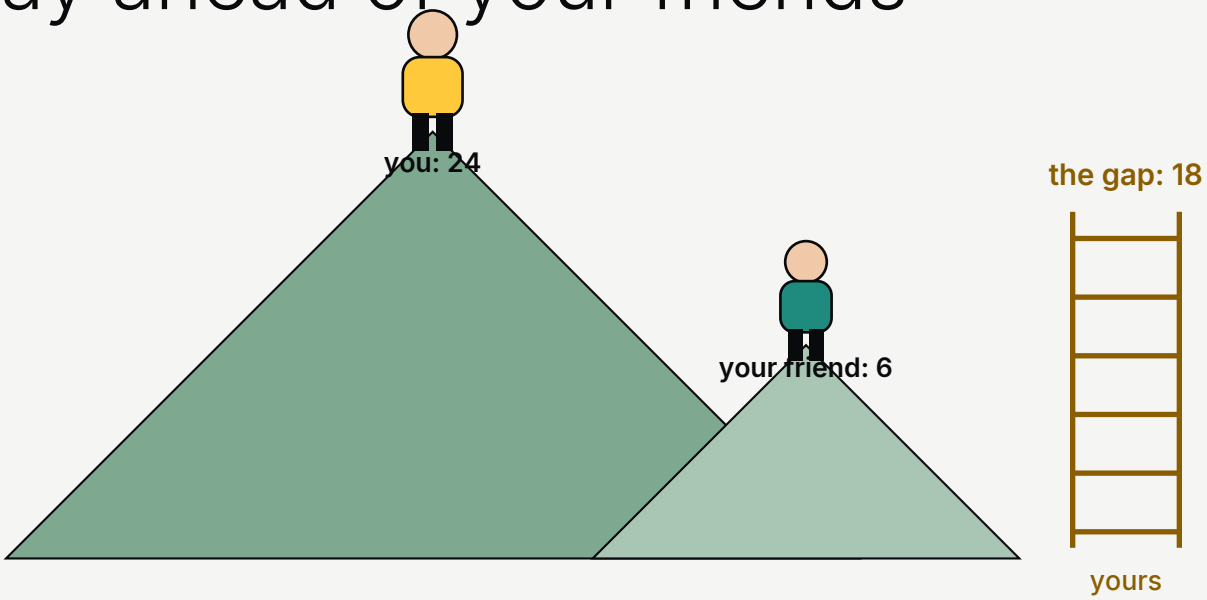

For a rank, one line can only count for a part: **half**, a **third**, a **quarter**, or a **fifth**. The rest does not count.

So: bring **many** friends. Build wide, like a tree. Not tall, like a tower.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

11 · LEADERS GET THE GAP

Stay ahead of your friends

Every rank has a number: 6, 12, 18, 24, 30, 36, 42.

If your number is higher than the people under you, you get the **gap**. On every module under them.

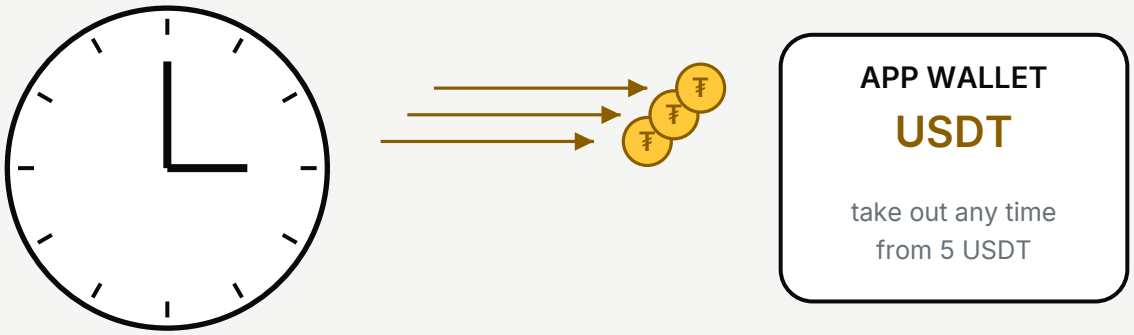

You are 24. Your friend is 6. The gap is 18. It is yours.

If your friend climbs to 24 too, the friend's part of the gap is the friend's. So: **stay ahead**.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

12 · PAYDAY

Money comes every day

12:00 UTC, every day

Every day at **12:00 UTC** the money goes to your **app wallet**.

In USDT, on BNB Smart Chain.

You can take it out any time. **5 USDT** minimum. You pay only the network fee.

No money made that day? Nothing comes. That is the rule.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

13 · SIX RULES

Remember six things

1. Paid on what modules make. Never on what people pay.
2. No profit, no money.
3. Build wide.
4. Stay ahead.
5. Modules end at 2×.
6. Paid every day, in USDT.

1 · You are paid on what modules **make**. Never on what people **pay**.

2 · No profit, no money. 3 · Build wide. 4 · Stay ahead.

5 · Modules end at 2×. 6 · Paid every day, in USDT.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

14 · PLEASE READ

You can lose your money

The engine can lose money. Then nobody is paid. This can go on for a long time.

Nothing is guaranteed. Not by Delta One, not by a bank, not by a government.

The money you pay for a module does not come back by itself. It can be lost.

Most members never get money from friends. Only the module's own share.

Only pay what you can afford to lose. Read the Key Facts. Ask questions first.

This page is a simple explanation. The full rules are in the Module Product Guide, the Key Facts and the Momentum Plan Guide. If something here and something there look different, the full documents are right. Draft for legal and compliance review. Not an offer. All figures are hypothetical illustrations at the engine's average daily result, not guarantees or typical results. Capital is at risk.

DELTA ONE

MODULE PRODUCT GUIDE

What a Delta One module is, how Daily Auto-Earn works, and the risks

MEMBERS

WHAT THIS DOCUMENT IS

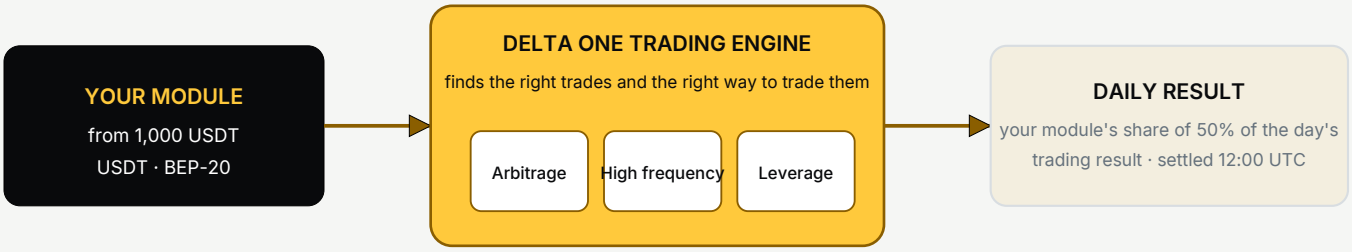

Everything about a module, in order, with pictures: a day, the first 11 days, the switch, the end at 2×.

Draft for legal and compliance review

01 WHAT A MODULE IS

The Delta One Module

Delta One is an **AI trading engine**: software that looks for the right trade opportunities and the right way to trade them, across arbitrage, high-frequency and leveraged strategies. It is sold as software as a service, in modules. A **module** is your purchase of the AI engine for the amount you choose, from 1,000 USDT; the engine does all the trading. Every day the engine makes a trading result, your module receives its share — **Daily Auto-Earn** — until the module has delivered **2× the amount you put in**. Then it ends.

every 100 USDT the engine makes: 50 USDT to members · 25 USDT to the compensation plan · 25 USDT to the DAO Treasury

MINIMUM	DELIVERS AT MOST	SETTLED
1,000 USDT	2×	12:00 UTC
any amount above · buy more than one	the amount put in, that amount included	every day · USDT on BEP-20

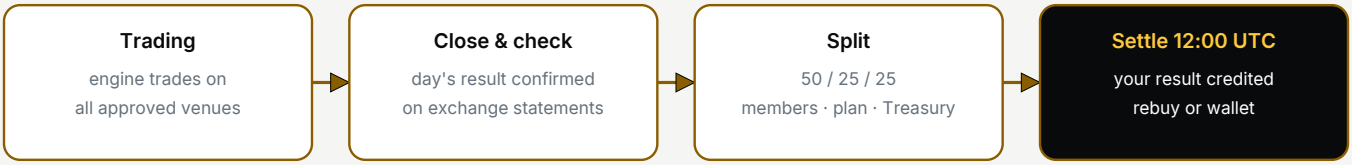

The three things to understand first

- **Results come only from trading results.** On a day the engine makes no profit, or a loss, your module receives nothing. There is no fixed or guaranteed daily figure. 0.50% a day is the engine's average daily result and the rate used in every example here: some days produce nothing, others several percent, so every figure is an average over time.
- **The amount you put in is not paid back separately.** The 2× is everything a module will ever deliver. The first half of what you receive is your own money coming back; only what you receive after that is rewards.
- **When a module reaches 2× it ends.** Any balance left in it is kept by the DAO Treasury. To keep earning you buy a new module — or let Auto-Rebuy do it for you from your results.

Important. A result of 0.50% a day is far higher than conventional financial products and carries a high risk of loss, including the loss of all the money you put in. Only use money you can afford to lose. Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations, not guarantees or typical results. Capital is at risk.

02 HOW A DAY WORKS

From the Engine to Your Module, Every Day

no trading result that day = nothing is credited, to anyone

Every USDT the engine makes is shared three ways: half to members as their daily result, a quarter to the compensation plan for members who introduce others, and a quarter to the DAO Treasury that runs the engine. Your module's share of the members' half is in proportion to its size.

Step	What happens	When
1	The engine trades on all approved venues; every trade is on chain.	All day
2	The day's result is confirmed against the exchange statements. Zero or a loss: nothing is credited to anyone.	Before settlement
3	The result is split 50 / 25 / 25. Your module's share of the members' 50% is calculated: on average 0.50% of the module.	At settlement
4	Your result is settled: it opens a rebuy module (Auto-Rebuy ON, or days 1–10) or lands in your app wallet (switch OFF).	12:00 UTC
5	The result is added to your module's running total. When the total reaches 2×, the module ends.	Same moment

A new module starts earning from the day after its purchase is confirmed: confirmed Monday, first result at Tuesday's settlement. Results are calculated on the amount in the module — a module does not grow by itself; it grows only through rebuy modules (next page).

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

03 YOUR FIRST ELEVEN DAYS

Daily Auto-Earn and the Rebuy Switch

For the first **ten calendar days** every result is automatically rebought: each day's result opens a new, small rebuy module with its own 2× life, so your results start earning results. On **day 11** you choose: withdraw that day's result, or leave the switch on. From day 12 your **Auto-Rebuy switch** decides every day.

Worked example: a 10,000 USDT module at the average daily result of 0.50%

Day	Capital earning (start of day)	Day's result (0.50%)	What happens to it	Rebuy modules open	Original module's running total
1	10,000.00 USDT	50.00 USDT	opens rebuy module R1	1	50.00 USDT
2	10,050.00 USDT	50.25 USDT	opens rebuy module R2	2	100.25 USDT
3	10,100.25 USDT	50.50 USDT	opens rebuy module R3	3	150.75 USDT
4	10,150.75 USDT	50.75 USDT	opens rebuy module R4	4	201.51 USDT
5	10,201.51 USDT	51.01 USDT	opens rebuy module R5	5	252.51 USDT
6	10,252.51 USDT	51.26 USDT	opens rebuy module R6	6	303.78 USDT
7	10,303.78 USDT	51.52 USDT	opens rebuy module R7	7	355.29 USDT
8	10,355.29 USDT	51.78 USDT	opens rebuy module R8	8	407.07 USDT
9	10,407.07 USDT	52.04 USDT	opens rebuy module R9	9	459.11 USDT
10	10,459.11 USDT	52.30 USDT	opens rebuy module R10	10	511.40 USDT
11	10,511.40 USDT	52.56 USDT	your choice: wallet or rebuy	10	563.96 USDT

After ten days, 511.40 USDT of results are at work in ten rebuy modules alongside the original 10,000 USDT: 10,511.40 USDT earning in total. Day 11's result, 52.56 USDT, is the first you can take out. Every rebuy module runs until it has delivered 2× its own amount; every result — rebought or withdrawn — counts toward the original module's 2×.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

The switch, in plain words

Switch	Each day's result...	Good for
ON (Auto-Rebuy)	opens a new rebuy module and starts earning the next day	letting results compound; nothing to do
OFF	lands in your app wallet in USDT; withdraw any time from 5 USDT, or buy a module from it	taking rewards as you go

You can change the switch any day from day 11. Rebuy modules can be any size — the 1,000 USDT minimum applies to modules you buy from outside. Rebuy modules count as new volume for the member who introduced you, exactly like a fresh purchase.

The Believer: 220% instead of 200%

A **Believer** is a member who commits to keeping Auto-Rebuy ON for a module's **entire life**. In return the module delivers **220% of the amount put in** instead of 200%. The choice is binding: once you have chosen to be a Believer, the switch cannot be turned OFF until the module has delivered its 220% — every result is rebought, every day, until then. Rebuy modules opened along the way run on the same terms.

	Standard module	Believer module
Auto-Rebuy switch	Yours to set from day 11, any day	Locked ON from the choice until 220%
Delivers in total	200% of the amount put in, that amount included	**220%** of the amount put in, that amount included
On 10,000 USDT at the 0.50% a day average	20,000 USDT · ends on day 400	22,000 USDT · ends on day 440
Results along the way	Rebuy or wallet, your choice	All rebought — nothing to the wallet until 220%
Rewards after your money back	10,000 USDT on 10,000 USDT	12,000 USDT on 10,000 USDT

Day counts are at the average daily result; the actual dates depend on how the daily results fall. A Believer's results are all at work in rebuy modules, so the 220% is reached as rebuy modules deliver; the original module's running total counts every result, rebought or not.

04 THE MODULE'S LIFE

How Long a Module Runs

The length of a module's life depends on the daily result on profitable days and on how many days are profitable. The table counts calendar days for the original module alone.

Daily result on profitable days	Share of days profitable	Your money back by day	Module ends (2×) on day	Total delivered on 1,000 USDT
0.50%	100%	200	400	2,000 USDT
0.50%	80%	250	500	2,000 USDT
0.50%	60%	333	667	2,000 USDT
0.25%	100%	400	800	2,000 USDT
0.25%	80%	500	1,000	2,000 USDT
0.25%	60%	667	1,333	2,000 USDT

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

The total is always at most 2,000 USDT per 1,000 USDT. A lower result or fewer profitable days does not reduce the maximum — it makes the module take longer to get there. Rebuy modules each have their own 2× and their own life.

05 EXAMPLES

What Different Module Sizes Deliver

At the engine's average daily result of 0.50% a day, switch OFF so results go to the wallet (no rebuy). Individual days vary from zero to several percent; any single day, month or year can differ from these averages.

Module	Per day	Per 30 days	First year (365 days)	Total over life (2×)	Rewards after your money back
1,000 USDT	5.00 USDT	150 USDT	1,825 USDT	2,000 USDT	1,000 USDT
5,000 USDT	25.00 USDT	750 USDT	9,125 USDT	10,000 USDT	5,000 USDT
10,000 USDT	50.00 USDT	1,500 USDT	18,250 USDT	20,000 USDT	10,000 USDT
25,000 USDT	125.00 USDT	3,750 USDT	45,625 USDT	50,000 USDT	25,000 USDT
50,000 USDT	250.00 USDT	7,500 USDT	91,250 USDT	100,000 USDT	50,000 USDT

With Auto-Rebuy ON

Module	Capital earning after 30 days	After 90 days	After 180 days	Day's result at day 180
1,000 USDT	1,161 USDT	1,567 USDT	2,454 USDT	12.27 USDT
10,000 USDT	11,614 USDT	15,666 USDT	24,541 USDT	122.70 USDT
50,000 USDT	58,070 USDT	78,328 USDT	122,705 USDT	613.52 USDT

Rebuy compounds the capital at work, so later results are larger; every module and rebuy module still ends at its own 2×, and nothing is paid on a day without a trading result. Illustration only.

Several modules

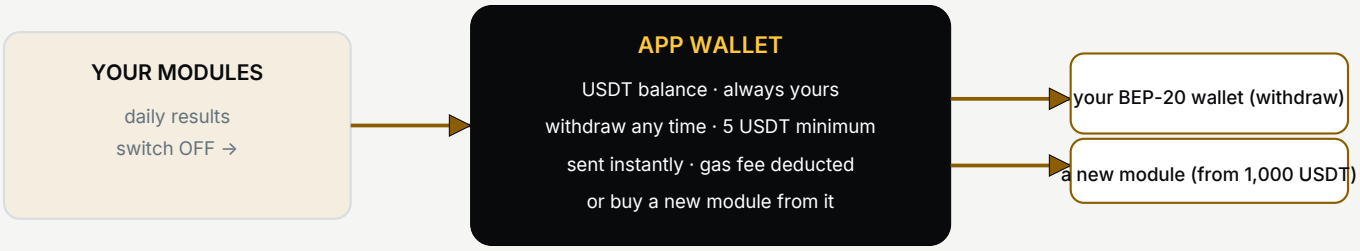

You can hold more than one module. Each has its own amount, its own running total and its own end date, and each is settled every day. Buying a new module from your app wallet works exactly like a purchase from outside.

Introducing others (optional)

You do not have to introduce anyone to hold a module. Members who build a team can qualify for commissions under the separate Momentum Plan (the compensation plan), paid daily from the compensation plan's share — never from your module's results and never from anyone's purchase. Most members earn no commission; see the Distributor Guide before taking part.

06 YOUR MONEY

Purchases, the App Wallet and Withdrawals

Topic	How it works
Network	USDT on BNB Smart Chain (BEP-20) only, for purchases and withdrawals. USDT on any other network, or any other token, is not credited.
Buying a module	After identity checks (KYC) you send USDT to your personal payment address. The module is confirmed once the transfer has enough confirmations, and starts earning from the next day's settlement.
Where the capital is held	In Delta One's custody wallets under multi-signature control; it is moved only to approved trading accounts for the engine.
Settlement	Every day at 12:00 UTC. Your dashboard shows each day's trading result, your result and each module's running total.
App wallet	Results with the switch OFF land here in USDT. Withdraw any time: 5 USDT minimum, sent instantly to your registered BEP-20 wallet, gas fee deducted. Or buy a new module from it.
Fees	None, except the network gas fee on withdrawals.
Cancelling	A module cannot be cancelled or withdrawn before it reaches 2×. Only results can be withdrawn.
Statements	Daily on the dashboard; every settlement and withdrawal has an on-chain transaction.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

07 RISKS

What Could Go Wrong

Risk	What it means for you
Trading risk	Trading can lose money. Days without a result pay nothing; long losing periods could mean no results for months.
Result level	0.50% a day is an average: individual days range from nothing to several percent, and the average can fall. It is not guaranteed.
Loss of capital	The amount you put in is not guaranteed and is not paid back separately. You may lose some or all of it.
No cancellation	Your capital cannot be taken out before the module reaches 2×, however long that takes.
Platform and counterparty	Exchanges, custodians or BNB Smart Chain can fail, freeze funds or be hacked.
Stablecoin	USDT could lose its 1-to-1 value with the USDT, reducing every balance.
Regulatory	Products like this are regulated in many countries. A regulator could restrict or stop the product.
Referral-plan risk	Plans that pay for introducing others depend on continued growth; most participants earn no commission.
Tax	Taxes in your country can reduce what you keep. Get your own tax advice.

Before you buy: read the Key Facts sheet and the member terms, ask any question you have, and only use money you can afford to lose entirely. Nobody can promise you a result. Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations, not guarantees or typical results. Capital is at risk.

08 ALL THE RULES IN ONE PLACE

The Module, Rule by Rule

Rule	Setting
Product	A purchase of the Delta One AI trading engine for the amount in the module; software as a service, not a deposit — the purchase price is not refundable
Minimum · increments	1,000 USDT · any amount above · several modules allowed
Daily result	Module's share of 50% of the day's gross trading result · on average 0.50% of the module
Loss day	No result; capital and 2× target unchanged
Maximum	2× the amount put in, that amount included; then the module ends · 2.2× for a Believer
Believer	Optional, binding choice to keep Auto-Rebuy ON for the module's entire life: the switch is locked ON until the module has delivered 220%
Start	First result at the settlement after the day the purchase is confirmed
Days 1–10	Results auto-rebuy: each day's result opens a rebuy module with its own 2×
Day 11	You may withdraw that day's result, or set the switch
Day 12 onward	Auto-Rebuy switch: ON = rebuy daily · OFF = result to app wallet daily
Rebuy modules	Any size; own 2× life; count toward the original's 2×; count as new volume for your introducer
App wallet	USDT · withdraw any time · 5 USDT minimum · instant · gas deducted · or buy a module from it
Network	USDT on BEP-20 only
Settlement	12:00 UTC, every day
Fees	None except gas on withdrawals
Cancellation	None before 2×
Compensation plan	Optional; commission from the plan's 25% share, paid daily; most members earn none

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

KEY FACTS · READ BEFORE YOU BUY

Delta One Module — Key Facts and Risks

Feature	Details
What it is	A purchase of the Delta One AI trading engine for the amount you choose, from 1,000 USDT. Software as a service, USDT on BEP-20.
What it delivers	Your module's share of 50% of each day's trading result, settled 12:00 UTC. On average 0.50% a day — **not guaranteed**.
Maximum	**2× the amount put in, that amount included.** Then the module ends. Nothing is paid back separately.
No result, no payment	Days with no trading profit, or a loss, pay nothing.
First 10 days	Results auto-rebuy: each day's result opens a small rebuy module with its own 2×.
From day 11	Your Auto-Rebuy switch: ON = rebuy every day · OFF = result to your app wallet every day.
Believer	Choose to keep Auto-Rebuy ON for the module's whole life and it delivers **220%** instead of 200%. Binding: the switch stays ON until 220%.
App wallet	Withdraw any time, 5 USDT minimum, sent instantly, gas fee deducted. Or buy a new module from it.
Break-even	You are ahead only after receiving more than you put in (at the average daily result: after about 200 days).
Cancelling	Not possible before 2×. Only results can be withdrawn.
Fees	None, except the network gas fee on withdrawals.
Commissions	Optional plan for introducing others; paid from a separate share. Most members earn none.

1,000 USDT module at the average daily result, switch OFF

Per day	Per 30 days	Your money back	Module ends	Most it can deliver	Rewards if it reaches 2×
5.00 USDT	150 USDT	Day 200	Day 400	2,000 USDT	1,000 USDT

Days are at the average daily result; individual days vary, and with a lower average every date moves later. Rebuy modules add to these figures.

Main risks

- **You can lose some or all of your money.** Nothing is guaranteed by Delta One, a bank or any government scheme.
- **Daily results vary widely**, from nothing to several percent, and the average can fall; long periods with low or no results are possible.
- **Your capital is locked until 2×**; exchanges, custodians or the network can fail; USDT can lose its peg.
- **Regulators may restrict** this product or the referral plan in your country.

Only buy a module with money you can afford to lose entirely. Ask questions before you buy. Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations, not guarantees or typical results. Capital is at risk.

WHAT THIS DOCUMENT IS

The questions members ask, with short answers.

MEMBER FAQ

Questions Members Ask

Getting started

Question	Answer
What is a module?	Your purchase of the Delta One AI trading engine for the amount you choose, from 1,000 USDT — a software product, not a deposit. The engine trades across arbitrage, high-frequency and leveraged strategies; your module receives its share of each day's result until it has delivered 2× your amount.
What is the minimum?	1,000 USDT per module, any amount above. You can hold several modules.
Which network?	USDT on BNB Smart Chain (BEP-20) only. USDT sent on any other network is not credited.
When does my module start earning?	From the settlement on the day after your purchase is confirmed. Confirmed Monday, first result Tuesday at 12:00 UTC.
Do I have to recruit anyone?	No. Holding a module and introducing others are separate.

Results

Question	Answer
How much will I earn?	Nobody can promise a figure. The engine's average daily result is 0.50% of your module (5 USDT a day on 1,000 USDT on average); some days produce nothing, others several percent. Real results depend on trading and may be lower or zero.
Is the result guaranteed?	No. You receive a share of actual trading results. On days without a result you receive nothing.
Why 2×?	A module is designed to deliver a fixed total of 2× your amount, that amount included. That limits how long each module runs and is what lets the engine keep paying new members.
When do I get my money back?	It comes back as part of the 2×. At the average daily result you have received your 1,000 USDT back after about 200 days; everything after that is rewards.
Does my module compound?	Not by itself. Results compound through rebuy modules: automatically for the first ten days, then whenever your Auto-Rebuy switch is ON.
What happens on a losing day?	You receive nothing that day. Your capital and your 2× target are unchanged.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Auto-Rebuy and the wallet

Question	Answer
What happens in the first ten days?	Each day's result automatically opens a small rebuy module, which earns from the next day. Your results start earning results.
What is special about day 11?	It is the first day you can take a result out: that day's result can be withdrawn, or you leave the switch on.
What does the switch do?	ON: each day's result opens a rebuy module. OFF: each day's result lands in your app wallet in USDT. Change it any day from day 11.
What is a Believer?	A member who commits to keeping Auto-Rebuy ON for a module's entire life. The module then delivers 220% of the amount put in instead of 200%. The choice is binding: the switch cannot be turned OFF until the module has delivered its 220%.
Can a Believer change their mind?	No. Once chosen, Auto-Rebuy stays ON for that module until it has delivered 220%. After that the switch is yours again: set it OFF and results go to your wallet.
How do I withdraw?	From the app wallet, any time, 5 USDT minimum. It is sent instantly to your registered BEP-20 wallet; the network gas fee is deducted.
Can I buy a module from my wallet?	Yes — from 1,000 USDT, exactly like a purchase from outside.
Do rebuy modules have a minimum?	No. They can be any size and each has its own 2×.

Your money

Question	Answer
Where is my money held?	In Delta One's custody wallets under multi-signature control, moved only to approved trading accounts for the engine.
Can I withdraw my capital early?	No. A module runs until it reaches 2× and cannot be cancelled. Only results can be withdrawn.
Are there fees?	None, except the network gas fee on withdrawals.
What happens when my module reaches 2×?	It ends. Results stop and any remaining balance stays with the DAO Treasury. Rebuy modules keep running to their own 2×.
What if Delta One stops trading?	You keep what you have already received but nothing more is delivered. If that happens before your module has returned your amount, you lose the difference.

Commissions

Question	Answer
Can I earn by introducing others?	Yes, under the separate Momentum Plan (Delta One's compensation plan), if you qualify for a rank. Commissions are a share of the results of modules in your team, paid daily.
Does a commission come out of my result?	No. Commissions are paid from the plan's own 25% share, never from your module's result or anyone's purchase.
Do my rebuy modules count for my introducer?	Yes — a rebuy module is new volume, like a fresh purchase. Only active modules count; ranks are rechecked every day.
How many members earn commission?	Few. In Delta One's own model about four in five members earn no commission at all.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Risks and help

Question	Answer
Can I lose money?	Yes. You can lose some or all of the money you put in.
Is this regulated?	Products like this are regulated in many countries. The member terms name the contracting entity; check that the product is permitted where you live.
Do I owe tax?	Possibly. Tax depends on your country. Get your own tax advice.
Who do I contact?	Member support through your dashboard. Complaints procedures are set out in the member terms.

Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations, not guarantees or typical results. Capital is at risk. This FAQ summarises the product; the member terms decide.

DELTA ONE

THE BELIEVER

One module kept on Auto-Rebuy for its whole life, then the harvest · an illustration at the average

MEMBERS · OCTOBER 2026

WHAT THIS DOCUMENT IS

What happens if you leave Auto-Rebuy on for a module's whole life: 220% instead of 200%.

01 WHAT A BELIEVER IS

One Module, Kept on Auto-Rebuy for Its Whole Life

A **Believer** is a member who chooses to keep the Auto-Rebuy switch ON for a module's entire life. In return the module delivers **220% of its purchase price** instead of 200%. The choice is binding: once made, the switch stays ON until the module has delivered its 220%. This illustration shows what that means in numbers, at the engine's average daily result of 0.50% a day, for a 10,000 USDT module, and what the member can then harvest.

THE MODULE	EVERY RESULT	SWITCH UNLOCKS	THEN
10,000 USDT	rebuys	day 440	the harvest
purchased on day 0 · Believer, 220%	a new module, each with its own cap	when the original has delivered 220%	every module still running pays to the wallet

How the arithmetic works

- Every day, every active module receives 0.50% of its purchase price (the average daily result) until it has delivered its cap.
- For a Believer, each day's results are rebought as a new module of that size, with its own cap. The illustration assumes a Believer's rebuy modules also run to **220%** (to be confirmed by Delta One; the sensitivity section shows 200%).
- On day 440 the original module has delivered 220% and the switch unlocks. From then on the member may send results to the wallet; the rebuy modules keep running until each has delivered its own cap. That is the harvest.
- The average is an average: real days vary from zero to several percent, and the average can change. The sensitivity section shows a lower average. Nothing here is guaranteed.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

02 THE FIRST 440 DAYS

Rebuying Every Result: the Fleet Grows

Day by day, each result becomes a new module: one rebuy module a day, 440 of them by day 440. On day 440 the original module delivers the last of its 220% and stops; from day 441 only the rebuy modules earn, each until its own cap. So the day-440 row counts the rebuy modules alone: 440 modules, 79,757 USDT — the finished original is not in it. Nothing has reached the wallet yet; everything is at work.

Day	Modules active	Active purchase value	Result that day	Results so far (all rebought)	Still to be delivered by the fleet
1	2	10,050 USDT	50.00 USDT	50 USDT	22,060 USDT
10	11	10,511 USDT	52.30 USDT	511 USDT	22,614 USDT
11	12	10,564 USDT	52.56 USDT	564 USDT	22,677 USDT
30	31	11,614 USDT	57.78 USDT	1,614 USDT	23,937 USDT
100	101	16,467 USDT	81.92 USDT	6,467 USDT	29,760 USDT
200	201	27,115 USDT	134.90 USDT	17,115 USDT	42,538 USDT
300	301	44,650 USDT	222.14 USDT	34,650 USDT	63,580 USDT
365	366	61,747 USDT	307.20 USDT	51,747 USDT	84,096 USDT
440	440	79,757 USDT	446.55 USDT	79,757 USDT	117,708 USDT

'Active purchase value' is the purchase price of every module still running: the original 10,000 USDT plus every rebuy module created from results. 'Still to be delivered' is the sum of every running module's cap less what it has already delivered.

DAY 440 · MODULES
440
one original + rebuy modules

ACTIVE PURCHASE VALUE
79,757 USDT
from 10,000 USDT purchased

RESULTS REBOUGHT
79,757 USDT
every result became a module

STILL TO COME
117,708 USDT
the fleet's remaining caps

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

03 THE HARVEST

Switch to Wallet on Day 440: What the Fleet Pays Out

From day 441 the member sends every result to the app wallet. The rebuy modules keep delivering until each reaches its cap; the youngest finish last. The wallet receives the whole of 'still to be delivered'.

Days	Wallet payouts in the period	Wallet total	Modules still running at the end
441–470	11,850 USDT	11,850 USDT	411
471–500	11,589 USDT	23,439 USDT	381
501–530	11,286 USDT	34,725 USDT	350
531–560	10,935 USDT	45,660 USDT	320
561–590	10,527 USDT	56,187 USDT	291
591–620	10,053 USDT	66,240 USDT	261
621–650	9,503 USDT	75,743 USDT	231
651–680	8,863 USDT	84,606 USDT	201
681–710	8,121 USDT	92,727 USDT	170
711–740	7,259 USDT	99,985 USDT	140
741–770	6,257 USDT	106,242 USDT	111
771–800	5,094 USDT	111,336 USDT	80
801–830	3,743 USDT	115,079 USDT	50
831–860	2,174 USDT	117,254 USDT	20
861–881	454 USDT	117,708 USDT	0

Three ways to run the same 10,000 USDT module

	Standard member	Believer · rebuy to day 440	Believer · rebuy to day 365
Switch	OFF from day 11 (results to wallet)	Locked ON until 220% (day 440), then OFF	ON until day 365, then OFF (needs a 200%-only module)
Caps	200%	220% (rebuy modules 220%, assumed)	shown for comparison only
Modules created	11	441	366
Total paid to the wallet	**22,511 USDT**	**117,708 USDT**	**84,096 USDT**
Last module ends	day 440	day 881	day 805
Results over the whole life	23,023 USDT	197,465 USDT	135,842 USDT

The standard member rebuys only on days 1–10 (the ten automatic rebuy days), so their total is 2× the original plus the small rebuy modules. The Believer's wallet total is larger because 439 further modules were created from results and each delivers its own cap. All of it depends on the engine earning the average on an ever-larger base, every day, for about two and a half years.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

The shape of it

Active purchase value of the fleet (gold) and cumulative wallet payouts (teal) · 10,000 USDT Believer module · at the average

04 KEEPING THE SWITCH ON LONGER

If the Member Keeps Rebuying After Day 440

After the original has delivered 220% the switch is the member's to set. A member who keeps it ON keeps compounding: every result still becomes a new module. The table shows the harvest if the switch is turned OFF at day 440, after two years, or after three years. The longer the base compounds, the larger the figures, and the more completely they depend on the engine earning the average on that base every single day. Treat the lower rows as arithmetic, not expectation.

Switch OFF at	Modules active then	Active purchase value then	Results rebought by then	Harvest paid to the wallet	Last module ends
day 440 (1 year 2½ months)	440	79,757 USDT	79,757 USDT	**117,708 USDT**	day 881
day 730 (2 years)	441	277,712 USDT	309,978 USDT	**393,973 USDT**	day 1170
day 1095 (3 years)	440	1,285,078 USDT	1,506,104 USDT	**1,829,325 USDT**	day 1535

Why these figures must be read with care. Every rebuy module is funded from results the engine actually made, so the member is not paying in more money; but the fleet only keeps growing if the engine keeps earning the average on a base that doubles roughly every five months. Long periods with low or no results stop the compounding and extend every date. A day without profit pays nothing to anyone.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

05 ANY SIZE

The Same Illustration for Other Module Sizes

Everything scales with the purchase price: a 1,000 USDT module is one tenth of the figures above, a 50,000 USDT module five times them.

Purchase price	Fleet at day 440 (active purchase value)	Harvest paid to the wallet	Standard member's wallet total	Believer harvest ÷ purchase
1,000 USDT	7,976 USDT	**11,771 USDT**	2,251 USDT	11.8×
5,000 USDT	39,878 USDT	**58,854 USDT**	11,256 USDT	11.8×
10,000 USDT	79,757 USDT	**117,708 USDT**	22,511 USDT	11.8×
25,000 USDT	199,392 USDT	**294,270 USDT**	56,279 USDT	11.8×
50,000 USDT	398,784 USDT	**588,541 USDT**	112,557 USDT	11.8×

Rebuy modules can be any size; the illustration rebuys each day's results as one module. The timing is identical for every size.

06 IF THINGS ARE DIFFERENT

Lower Averages and 200% Rebuy Modules

The 220% cap on a Believer's rebuy modules is an assumption to be confirmed. And the average is not fixed. Both change the figures.

Case	Original delivers 220% on	Fleet then (active purchase value)	Harvest paid to the wallet	Last module ends
Average 0.50% · rebuy modules 220%	day 440	79,757 USDT	**117,708 USDT**	day 881
Average 0.50% · rebuy modules 200%	day 440	77,327 USDT	**101,535 USDT**	day 840
Average 0.40% · rebuy modules 220%	day 550	79,855 USDT	**117,826 USDT**	day 1100
Average 0.30% · rebuy modules 220%	day 734	80,113 USDT	**118,136 USDT**	day 1468

A lower average changes the timing far more than the total: the original takes longer to deliver its 220%, the fleet compounds for longer at the lower rate, and the harvest lands at about the same figure, later. At 0.30% a day the original module alone takes about two years to deliver its 220%, and the last rebuy module ends after more than four. The 200% rebuy-module case is smaller because every rebuy module delivers less.

07 RULES AND RISKS

What a Believer Must Know

– **The choice is binding.** Once a module is a Believer module, its switch cannot be turned OFF until it has delivered 220%. Results of that module can only rebuy.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

- **Rebuy modules are modules.** Each has its own cap, counts as new volume for the upline, and ends when it has delivered its cap. Only active modules count toward anyone's qualifying volume.
- **Nothing is withdrawable until the switch unlocks**, apart from results of modules whose switch is OFF. Plan for that.
- **The purchase price is not refundable.** A module is a software purchase of the Delta One AI engine, not a deposit; the first half of what it delivers equals the price.
- **Everything depends on trading profit actually made.** A day without profit pays nothing. The average can fall; long periods with low or no results are possible and push every date later.
- **Figures are averages over time, not promises.** Any single day, month or year can land above or below them. Most members in the model earn no commission; this document is about module results, not commission.

Only purchase a module with money you can afford to lose entirely. Draft for legal and compliance review. Not an offer. Figures are hypothetical illustrations at the engine's average daily result, not guarantees or typical results. Capital is at risk.

DELTA ONE

JAMES PACK

Founder, Delta One · Co-founder of ASEA · 40+ years of entrepreneurial leadership

Vision · Entrepreneurship · Innovation · Legacy

"Principle and purpose over ego and economics. We are not here to make a million USDT. We are here to change a million lives."

— James Pack, Founder, Delta One

DIRECT SELLING
100M USD+
ASEA revenue above 100 million USD by 2014 · DSN Global 100 five years running

EXPERIENCE
40+ yrs
telecommunications, consulting, real estate, direct selling

ROLE AT DELTA ONE
Founder
multi-signature signatory on the DAO Treasury

Who he is

James Pack is a company builder with more than forty years of entrepreneurial leadership across telecommunications, real estate and direct selling. He spent two decades as a sales and marketing executive in telecom, founded his own consulting firm, built and led development projects across Park City and the Salt Lake Valley — commercial and residential — and then partnered with Verdis Norton to co-found ASEA, commercializing a novel redox-signaling technology and growing it into a global direct-sales company: one of the hundred largest in the world, with revenue above one hundred million USD by 2014. He brings to Delta One the thing every distributor organization needs most at the start: someone who has already built one and scaled it internationally.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Career

1980s–1990s	**Telecommunications sales and marketing** More than two decades of corporate experience in sales and marketing in the telecommunications sector.
1990s	**Pack Consulting** Founded his own firm, providing consulting and lobbying at state level for telecommunications clients.
Mid-1990s onward	**Real estate development** Built and led development projects across Park City and the Salt Lake Valley — commercial and residential.
2007	**Co-founds ASEA** Partners with Verdis Norton to commercialize a novel redox-signaling technology; founds ASEA in Salt Lake City, Utah, and serves as its President. Product sales begin in 2007; the company launches officially in 2008.
2013–2014	**ASEA scales** A new production facility opens in 2013; revenue passes one hundred million USD in 2014.
2018–2022	**DSN Global 100** ASEA is listed among the world's hundred largest direct-selling companies five years in a row, reaching number 43 in 2022.
2026	**Delta One** Founds Delta One, bringing a lifetime of entrepreneurial experience, vision and values into its creation; one of the four signatories on the DAO Treasury's multi-signature wallets.

Accolades and milestones

What	Detail
40+ years of entrepreneurial leadership	Building businesses, teams and opportunities across multiple industries, with a focus on people, innovation and long-term impact.
Built a 100M USD+ direct-selling company	ASEA: founded in Salt Lake City in 2007, product sales from 2007, official launch 2008, revenue above 100 million USD by 2014; described by Delta One as impacting millions of lives.
DSN Global 100, five consecutive years	Ranked number 43 in 2022, ASEA's highest position since first making the list.
Production and operations	Credited within ASEA with the attention to detail behind the research and engineering needed to scale production.
Public-affairs experience	Founder of Pack Consulting, consulting and lobbying at state level for telecommunications clients.

What he brings to Delta One

- **He has done this before.** Field organizations, compensation plans, compliance across markets, production and customer service at scale — ASEA went through all of it under his presidency.
- **Discipline about the numbers.** The Delta One library is built on verified arithmetic rather than promises; that standard is set at the top.
- **Governance.** Every movement of member funds at Delta One needs more than one signature. James is one of the four signatories.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Leadership · Execution · Performance · Accountability · People

"My career has been about building people and teams for high-stakes environments. At Delta 1, the mission changes. The standard doesn't."

— Ricky Lundell, President, Delta One

WORLD TITLES
2×
FILA Grappling World Champion, 2007 and 2008 · King of Pankration · Team USA captain (2×)

SPECIAL OPERATIONS
2,000+
U.S. Navy SEALs and special operations personnel trained

ROLE AT DELTA ONE
President
execution, operational excellence and team development · multi-signature signatory

Who he is

Ricky Lundell is a world champion who became a champion-maker. He started Brazilian jiu-jitsu at six under Pedro Sauer, earned a black belt at nineteen with a competitive record of 152 wins and 5 losses, won the FILA Grappling World Championships twice, and then spent more than two decades developing and coaching world champions and some of the biggest names in professional combat sports. He finished a university science degree at eighteen, and at twenty became the first NCAA Division I wrestler recruited on jiu-jitsu experience alone, by Olympic gold medallist Cael Sanderson at Iowa State. Alongside the fight game he designed, developed and delivered high-risk training programs for more than 2,000 U.S. Navy SEALs and special operations personnel — environments where preparation, precision and attention to detail are life and death. The through-line is the same in every chapter: building people and teams that perform under pressure.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Career

Age 6	**Begins Brazilian jiu-jitsu** Trains under Pedro Sauer, an eighth-degree Gracie red-and-black belt, at a sister school of Rorion Gracie's academy; competes against adults in his mid-teens.
Age 15–18	**University early** Enrols at Utah Valley University at fifteen and graduates with a science degree at eighteen.
Age 19	**Black belt** Earns his black belt from Pedro Sauer at nineteen, one of the youngest North Americans to do so, with a record of 152–5 overall and 78–0 internationally.
2004–2006	**US Open and Gracie Worlds** US Open Jiu-Jitsu Champion in 2004 and 2005; medals at the Gracie Jiu-Jitsu World Championships in 2006 (black belt).
Age 20	**Iowa State wrestling** Recruited by Cael Sanderson as the first NCAA Division I wrestler with only jiu-jitsu and submission-grappling experience; letters for the Cyclones, learning from the Dan Gable-era lineage of elite coaches (Sanderson and Cunningham) how standards, accountability and culture create championship teams.
2007–2008	**World champion, twice** FILA Grappling World Championships gold at −70 kg in Antalya (2007) and Lucerne (2008); USA World Team Trials gold and Most Outstanding Grappler (2007).
2008 onward	**Head coach to UFC world champions** Strategy coach and head MMA trainer at University of Grappling in Lindon, Utah; grappling coach on The Ultimate Fighter; corner of Jon Jones, Frank Mir, Sean Sherk, Miesha Tate, Carlos Condit, Travis Browne and Dan Hardy, among others — more than two decades building high-performance individuals and teams.
Special operations	**2,000+ Navy SEALs and special operations personnel** Designed, developed and delivered high-risk training programs; responsible for building and developing teams in some of the most demanding environments on the planet.
2010	**Pancrase world titles** International Pancrase Submission Wrestling World Champion at 149 lb (twice) and Absolute Champion (2010).
2012–2017	**Instructor of the Year** Named Brazilian Jiu-Jitsu Instructor of the Year six years running (per his academy); later head wrestling coach at Bishop Gorman High School, Las Vegas.
2026	**Delta One** President of Delta One: execution, operational excellence, team development, and ensuring the organization is built with care for the people it serves; one of the four signatories on the DAO Treasury's multi-signature wallets.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Accolades

What he brings to Delta One

- **Execution and operational excellence.** As President he brings the standards of preparation, precision and responsibility of the special-operations world to Delta One's daily settlement, back office and controls.
- **A coach's eye for people.** Twenty years building leaders, establishing accountability and creating cultures designed to perform under pressure — the job of a field leader, applied to a distributor organization.
- **Governance.** Ricky is one of the four signatories on Delta One's multi-signature wallets; no member funds move on one signature.

> **In his words:** "My career has been about building people and teams for high-stakes environments. At Delta 1, the mission changes. The standard doesn't."

Draft for the founders' sign-off. Career facts are taken from the Delta 1 profile cards and the public records listed at the end of this document. Not an offer; no figure in this document is a promise of earnings.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

THE PROFILE CARD

Ricky Lundell · President

The Delta 1 profile card, for sharing on screen or in print. The same facts and quotation appear in this document.

DELTA ONE

THE PARTNERSHIP

James G. Pack and Ricky Lundell — two founders, one standard

FOUNDER PROFILE · FOR DISTRIBUTORS

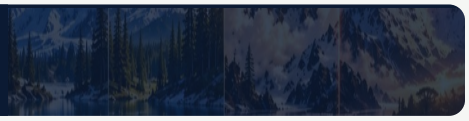

WHAT THIS DOCUMENT IS

How the two founders work together and what standard they hold.

Draft for legal and compliance review

THE PARTNERSHIP

Two Founders, One Standard

Delta One is led by two Utah founders with very different résumés and the same standard. James Pack, the Founder, built a direct-selling company from a 2007 start-up to the DSN Global 100 and more than one hundred million USD of revenue, after forty years of building businesses in telecom and real estate. Ricky Lundell, the President, won multiple world championships, spent more than two decades coaching UFC champions, and trained more than two thousand Navy SEALs and special operations personnel. One knows how to build a field organization that lasts; the other knows how to prepare people to perform under pressure. Together they set the rule every Delta One document is written to: say exactly how it works, prove the numbers, and never promise what trading has not earned.

JAMES PACK · FOUNDER

Vision

co-founder of ASEA · 100M USD+ · DSN Global 100 · 40+ years of entrepreneurship

RICKY LUNDELL · PRESIDENT

Execution

multiple-time world champion · coach to UFC champions · 2,000+ special operations personnel

TOGETHER

People

the values on both cards: people, opportunity, innovation, legacy

What each founder brings

	James G. Pack	Ricky Lundell
Background	40+ years of entrepreneurial leadership: telecom executive and founder; Pack Consulting; Utah real-estate developer; co-founder and President of ASEA, from 2007	Gracie jiu-jitsu black belt at 19; Iowa State wrestler under Cael Sanderson; FILA world champion 2007 and 2008; King of Pankration; Team USA captain (2×)
Proven at	Building a direct-selling company to 100M USD+ and the DSN Global 100, five years running	Winning at world level, then preparing others to win: UFC champions, and 2,000+ Navy SEALs and special operations personnel
Role at Delta One	Founder · vision, strategy and the long-term purpose	President · execution, operational excellence and team development
Signatory	Yes — multi-signature wallets	Yes — multi-signature wallets

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of rewards. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

How Delta One is governed

Member funds at Delta One are held in multi-signature wallets. No purchase, payout, commission run or transfer to a trading account moves on a single signature: the founders and the Architect who runs the trading engine sign together, and the back office reconciles every wallet against the exchange statements every day. Members' results and distributors' commissions are paid at the 12:00 UTC settlement, in USDT, only from the profit the engine actually made that day.

Principle	What it means in practice
No profit, no payout	On a day without trading profit nobody is paid — not members, not leaders, not the founders' seats.
Every module ends at 2×	A module delivers at most twice the amount put in, purchase price included. Nothing is promised beyond it.
Half to members, a quarter to the plan, a quarter to the Treasury	Every USDT of trading profit is split the same way, every day; commission never comes from purchases.
Proven, not promised	Every figure in the library is recalculated independently and re-run a thousand times; the audits are published.
Four signatures	James Pack, Ricky Lundell, Chris and the Architect sign together; the trading structure and the cash-flow controls are documented.

Why it matters to a distributor

- You are building on a plan designed by someone who has built a 100M USD direct-selling company — the Momentum Plan was modelled on ten-million-member organizations before the first module was sold.
- You are led by a coach whose profession is preparing people to perform; expect the same from the Delta One field culture.
- You can show prospects the founders' public records, not just their titles. Both profiles list their sources.

In their words

James Pack: “Principle and purpose over ego and economics. We are not here to make a million USDT. We are here to change a million lives.”

Ricky Lundell: “My career has been about building people and teams for high-stakes environments. At Delta 1, the mission changes. The standard doesn't.”

The founders' story — how James and Ricky met and why they built Delta One together, in their own words, to be supplied and approved before distribution.
