DELTA ONE

USDT AND YOUR WALLET

A beginner's guide to getting, sending and withdrawing USDT on BNB Smart Chain

MEMBERS · DISTRIBUTORS · OCTOBER 2026

WHAT THIS DOCUMENT IS

How to get USDT, send it to the app and take money out, and the mistakes that lose money.

Draft for legal and compliance review

01 · WHAT USDT IS

Money on the blockchain, in plain words

Delta One is paid in USDT and pays in USDT. This guide is for someone who has never held a digital dollar. Read it before you send anything.

USDT (Tether) is a digital dollar: one USDT is designed to be worth one US dollar. It lives on a blockchain, a public ledger that no single company controls, and it moves from one wallet to another in minutes, day or night, across borders, for a small network fee. It is money you hold yourself: no bank account is needed, and nobody can freeze a transfer, which also means nobody can reverse one.

A wallet is an app (or a small device) that holds your USDT and the private key that controls it. Your **address** is like an account number: a string starting with `0x` that you can share. Your **seed phrase** (12 or 24 words) is the master key: anyone who has it owns everything in the wallet. Write it on paper, never type it into a website, never photograph it, never share it, not even with Delta One. Delta One will never ask for it.

The network matters. USDT exists on several blockchains. Delta One uses **BNB Smart Chain, called BEP-20**. USDT sent on another network (Ethereum ERC-20, Tron TRC-20, Solana, Polygon) goes to an address Delta One cannot see and is lost. Every time you send, the screen will ask which network: the answer is always **BNB Smart Chain (BEP-20)**.

02 · GETTING USDT

Three ways to get it

Way	How it works	Good for
An exchange	Open an account at a regulated exchange that operates in your country (identity check required), buy USDT with a bank transfer or card, then withdraw it to your own wallet choosing the BEP-20 network.	Most people. Fees are low and the process is documented.
A trusted person	Someone who already holds USDT sends it to your wallet, and you pay them in cash or by bank transfer. Only with someone you know; confirm the amount on screen before you pay.	Small amounts; countries where exchanges are hard to use.
Peer-to-peer market	An exchange's P2P section matches you with a seller; the exchange holds the USDT until your payment clears.	Countries where card purchase is unavailable.

Keep a small amount of **BNB** in the same wallet: the network fee for sending USDT on BNB Smart Chain is paid in BNB, usually a few cents. A wallet with USDT and no BNB cannot send.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

03 · YOUR WALLET

Setting up the wallet you control

- [ ] Install a reputable self-custody wallet app (your sponsor will name the ones Delta One has tested) from the official app store only.
- [ ] Create a new wallet. Write the seed phrase on paper, twice, and keep the two copies in different safe places. Confirm it in the app.
- [ ] Add the BNB Smart Chain network if the app does not show it, and add the USDT (BEP-20) token so your balance shows.
- [ ] Copy your BEP-20 address and paste it into your Delta One profile as the withdrawal address. Check the first four and last four characters match on both screens.
- [ ] Send a small test amount first, from the exchange to the wallet, and from the wallet to Delta One. Only then send the real amount.

04 · PAYING FOR A MODULE

Sending the purchase price

- In the Delta One app choose the module size and copy the payment address it shows. Addresses can be unique per purchase; never reuse an old one.
- In your wallet: send USDT, paste the address, choose **BNB Smart Chain (BEP-20)**, enter the exact amount, check the first and last four characters of the address again, and confirm.
- Wait. A BEP-20 transfer confirms in about a minute; the app shows the module as confirmed shortly after. Your module earns from the first 12:00 UTC settlement after the day of confirmation.
- Keep the transaction hash (the long code your wallet shows). It is your receipt.

05 · WITHDRAWING

Taking money out of the app wallet

- Results with the switch OFF, commissions and founder payouts land in your Delta One app wallet in USDT at the 12:00 UTC settlement.
- Withdraw any time, 5 USDT minimum, to the BEP-20 address in your profile. It is sent immediately; the network fee is deducted from the amount; there is no other fee.
- Make your first withdrawal small, on day 11, to prove the path. Then withdraw as you like.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing.

Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

06 · MISTAKES THAT LOSE MONEY

Read this twice

Mistake	What happens	How to avoid it
Wrong network	USDT sent as ERC-20, TRC-20 or any network other than BNB Smart Chain (BEP-20) is lost.	Read the network name on the sending screen every time.
Wrong address	A transfer to a mistyped or pasted-wrong address cannot be reversed.	Paste, never type; compare the first and last four characters; send a small test first.
No BNB for the fee	The wallet cannot send.	Keep a few dollars' worth of BNB in the wallet.
Sharing the seed phrase	The wallet is emptied.	Paper only. Nobody, no website, no 'support agent' ever needs it.
Fake apps and links	A copied app or a link in a message steals the wallet.	Official app stores only; type addresses yourself; Delta One never sends payment links in chat.
Sending from an exchange straight to Delta One	Some exchanges send from pooled addresses; a refund or a mix-up cannot be traced to you.	Exchange → your own wallet → Delta One.
Expecting a refund	A module purchase is not refundable and cannot be withdrawn.	Only purchase with money you can afford to lose.

USDT can lose its peg to the US dollar; exchanges, wallets and networks can fail or be attacked; laws on digital assets differ by country and change. None of this is controlled by Delta One. Keep amounts you cannot afford to lose out of it.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing.
Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk.
