DELTA ONE

THE MOMENTUM PLAN

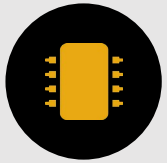

How Delta One pays you for introducing others — the base matrix, the breakage differential and the rules behind both

CUSTOMER EDITION · OCTOBER 2026 · DRAFT FOR LEGAL AND COMPLIANCE REVIEW

Delta One in one minute

Three things to understand before the plan

An AI trading engine

Software as a service: the Delta One AI engine looks for the right trades and the right way to trade them — arbitrage, high frequency and leverage — and does all the trading.

A module is a purchase

You purchase the AI engine in modules, for the amount you choose from 1,000 USDT — a software product, not a deposit. Every day the engine makes a result, the module receives its share: Daily Auto-Earn, settled at 12:00 UTC.

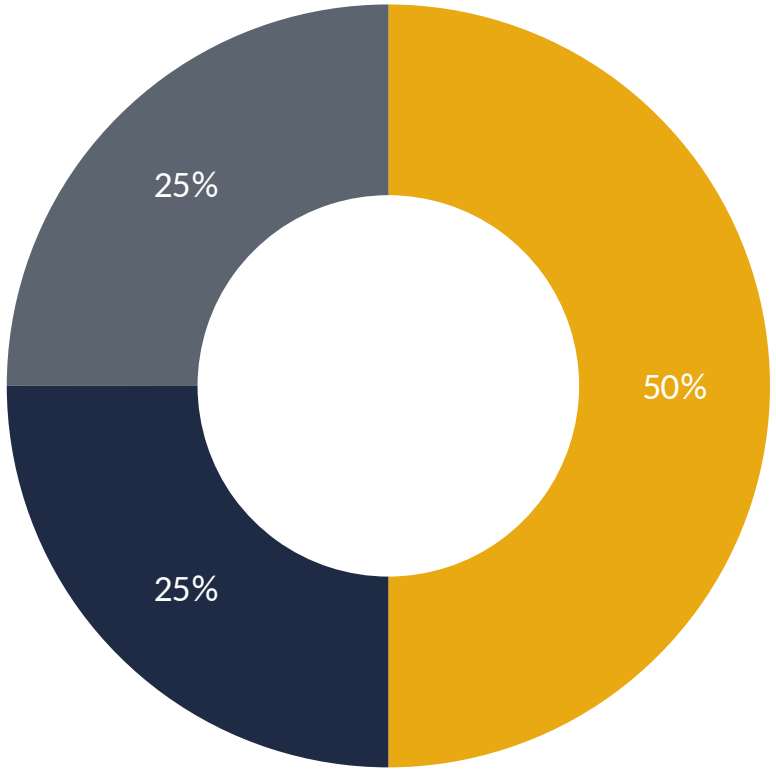

2×, then it ends

A module delivers at most two times its purchase price, price included, then it ends. The purchase price is not refundable; the first half of what you receive equals it, and only after that is it rewards.

Every 100 USDT of trading profit is shared three ways

The compensation plan is paid from its own quarter — never from anyone's purchase

50 USDT

to members

Their modules' daily results — on average 0.50% of each module on a day the engine earns 1.00% gross

25 USDT

to the compensation plan

Every commission in this plan — base matrix and breakage differential — comes from here. At most 21 USDT of it is ever paid on a contract.

25 USDT

to the DAO Treasury

The project's own share, which also keeps any commission no member qualifies for

No profit, no payout. A day without trading profit pays nobody — no member result, no commission.

0.50%

a day — the engine's average daily result

Every figure in this presentation uses it

An average, not a daily promise

Some days the engine produces nothing; other days several percent. Over time the daily results average about 0.50% for a module (1.00% gross).

Figures are averages over time

A monthly figure is what the average produces in thirty days. Any single day, month or year can land above or below it.

No profit, no payout

Days without trading profit pay nothing. The average itself can change, and nothing is guaranteed by Delta One, a bank or any government scheme.

A 1,000 USDT module at the average daily result

What a member sees: 5 USDT a day on average, results equal to the purchase price by about day 200, the module ends at 2,000 USDT by about day 400

1

Day 0

1,000 USDT purchase

Paid in USDT on BNB Smart Chain (BEP-20). Earns from the first settlement after the purchase is confirmed.

2

Days 1–10

Auto-rebuy

Every result opens a small rebuy module with its own 2× — and counts as new volume for the upline.

3

Day 11 on

Your switch

Auto-Rebuy ON = rebuy every day. OFF = the result goes to your app wallet: withdraw any time, 5 USDT minimum, gas fee only.

4

≈ Day 200

Purchase price back

Results received equal your 1,000 USDT purchase price — the first half of the 2×. Everything after this is rewards.

5

≈ Day 400

2,000 USDT · ends

The module has delivered 2× its purchase price, price included. Purchase a new module and the cycle restarts.

The Believer: keep Auto-Rebuy ON for the module's whole life and it delivers 220% instead of 200% — 2,200 USDT on 1,000 USDT, ending at about day 440. The choice is binding: the switch stays ON until 220%.

Paid two ways, on every contract, every profitable day

2% of every contract's daily earnings on each level your rank reaches — and the leader gap above everyone below you

The two ways you are paid

Both are a share of a contract's daily earnings — never of its purchase price. Together they never exceed 42% of what a contract earns

1 · Base matrix

2% per level, up to 21 levels

- Every qualified upline receives 2% of each contract's daily earnings, on every level their rank reaches: Fuji 3 levels, Everest 21.
- A 10,000 USDT contract earning 50 USDT a day pays each qualified upline 1.00 USDT a day — 30 USDT a month.
- Capped per day by rank: from 1,000 USDT (Fuji) to 7,000 USDT (Everest).

2 · Breakage differential

Your entitlement minus the highest claimed below you

- Each rank has an entitlement: 6% at Fuji, 12%, 18%, 24%, 30%, 36%, up to 42% at Everest.
- On every contract, after the base is paid, you receive the gap between your entitlement and the highest entitlement already claimed below you in that line.
- Not capped, no depth limit. When someone below you reaches your rank, their part of the gap is theirs — stay ahead of your leaders.

Seven ranks, named after mountains

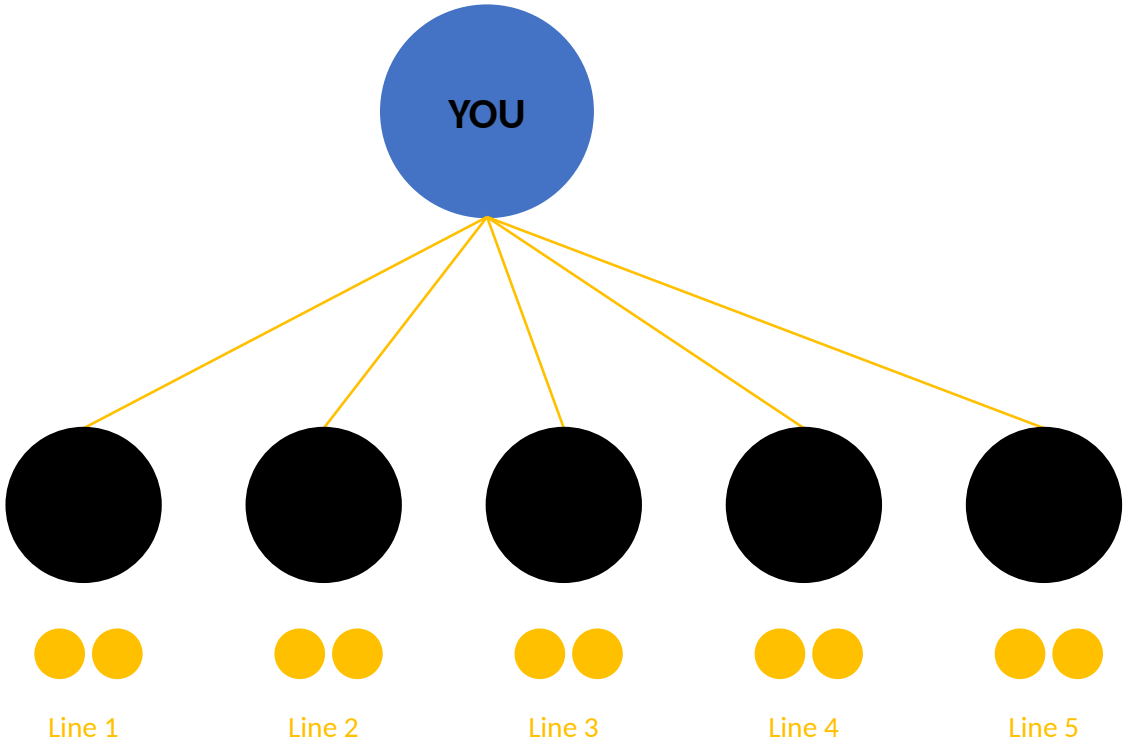

Three steps to qualify: your own purchase, your personal enrollments and your qualifying volume — counted line by line

Rank	Own purchase	Enrolled	Qualifying volume	Max per line	Paid levels	Entitlement	Daily cap (base)
1 · Fuji	1,000 USDT	2	2,000 USDT	50% · 2+ lines	1–3	6%	1,000 USDT
2 · Kilimanjaro	2,500 USDT	3	5,000 USDT	50% · 2+ lines	1–6	12%	2,000 USDT
3 · Matterhorn	6,000 USDT	4	12,000 USDT	33⅓% · 3+ lines	1–9	18%	3,000 USDT
4 · Denali	12,000 USDT	5	25,000 USDT	33⅓% · 3+ lines	1–12	24%	4,000 USDT
5 · Rainier	25,000 USDT	7	75,000 USDT	25% · 4+ lines	1–15	30%	5,000 USDT
6 · K-2	50,000 USDT	12	250,000 USDT	20% · 5+ lines	1–18	36%	6,000 USDT
7 · Everest	200,000 USDT	21	1,000,000 USDT	20% · 5+ lines	1–21	42%	7,000 USDT

Only active modules count toward qualifying volume. Ranks are rechecked at every 12:00 UTC settlement, so a rank is earned every day, not once.

Build wide: the line balance rule

A line is one person you enroll and everyone beneath them. No single line can count for more than a set share of a rank's qualifying volume

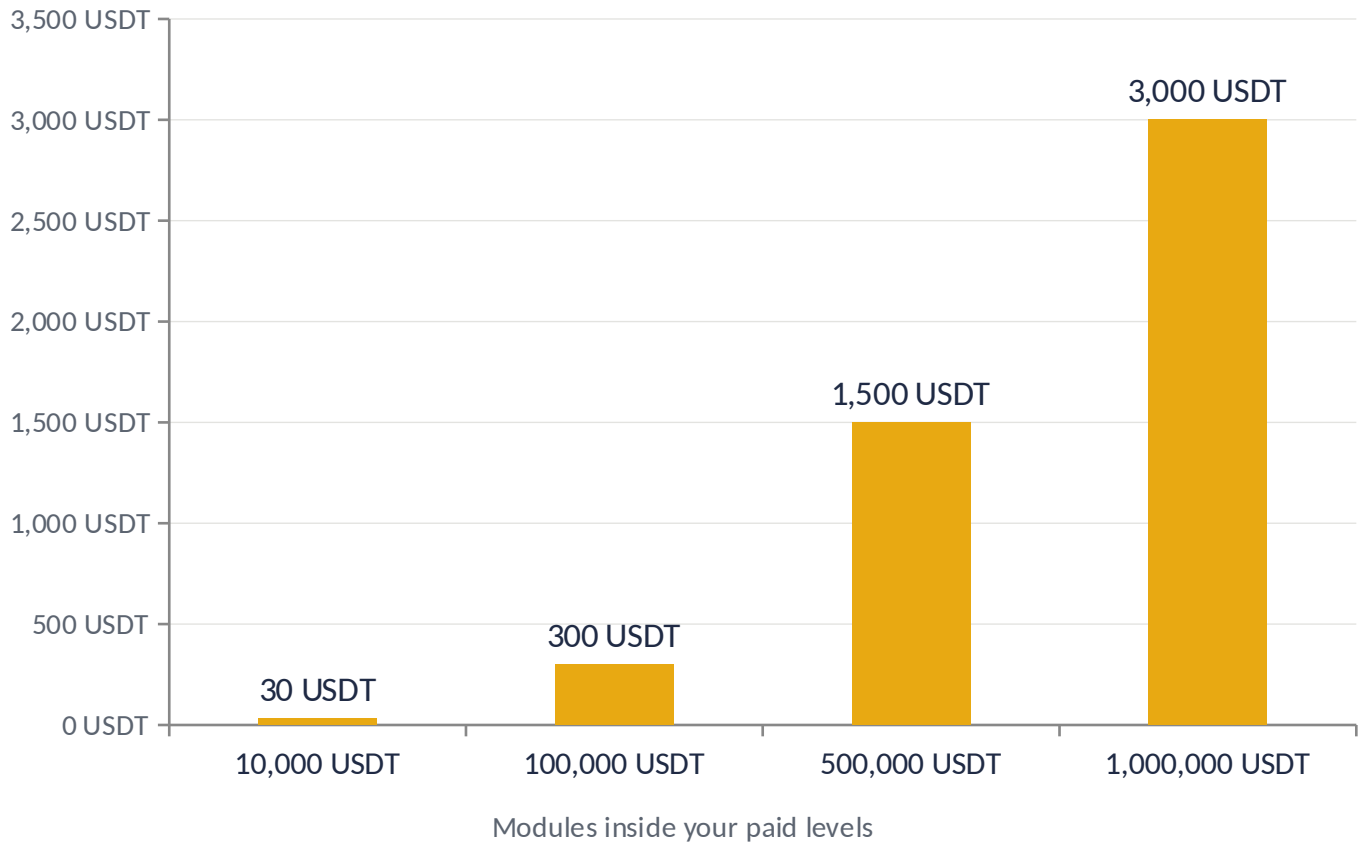

50%	**Fuji · Kilimanjaro** no line counts for more than 50% of the volume · at least 2 lines
33⅓%	**Matterhorn · Denali** no line counts for more than 33⅓% of the volume · at least 3 lines
25%	**Rainier** no line counts for more than 25% of the volume · at least 4 lines
20%	**K-2 · Everest** no line counts for more than 20% of the volume · at least 5 lines

Volume above the share simply doesn't count. Example: 13,500 USDT of team volume with 10,000 USDT in one line qualifies only as Kilimanjaro, not Matterhorn — balanced lines earn the higher rank, deeper pay and the larger differential.

The base matrix in numbers

Monthly base-matrix rewards from the volume inside your paid levels, at the average daily result (0.50% × 2% × 30 days)

1.00 USDT

a day from a 10,000 USDT contract

A 10,000 USDT contract earning 50 USDT a day at the average pays each qualified upline 2% of that: 1.00 USDT a day, 30 USDT a month, on every level their rank reaches.

100 USDT

a day from 1,000,000 USDT

A million USDT of modules inside your paid levels is 100 USDT a day — 3,000 USDT a month — from the base matrix alone, before the differential.

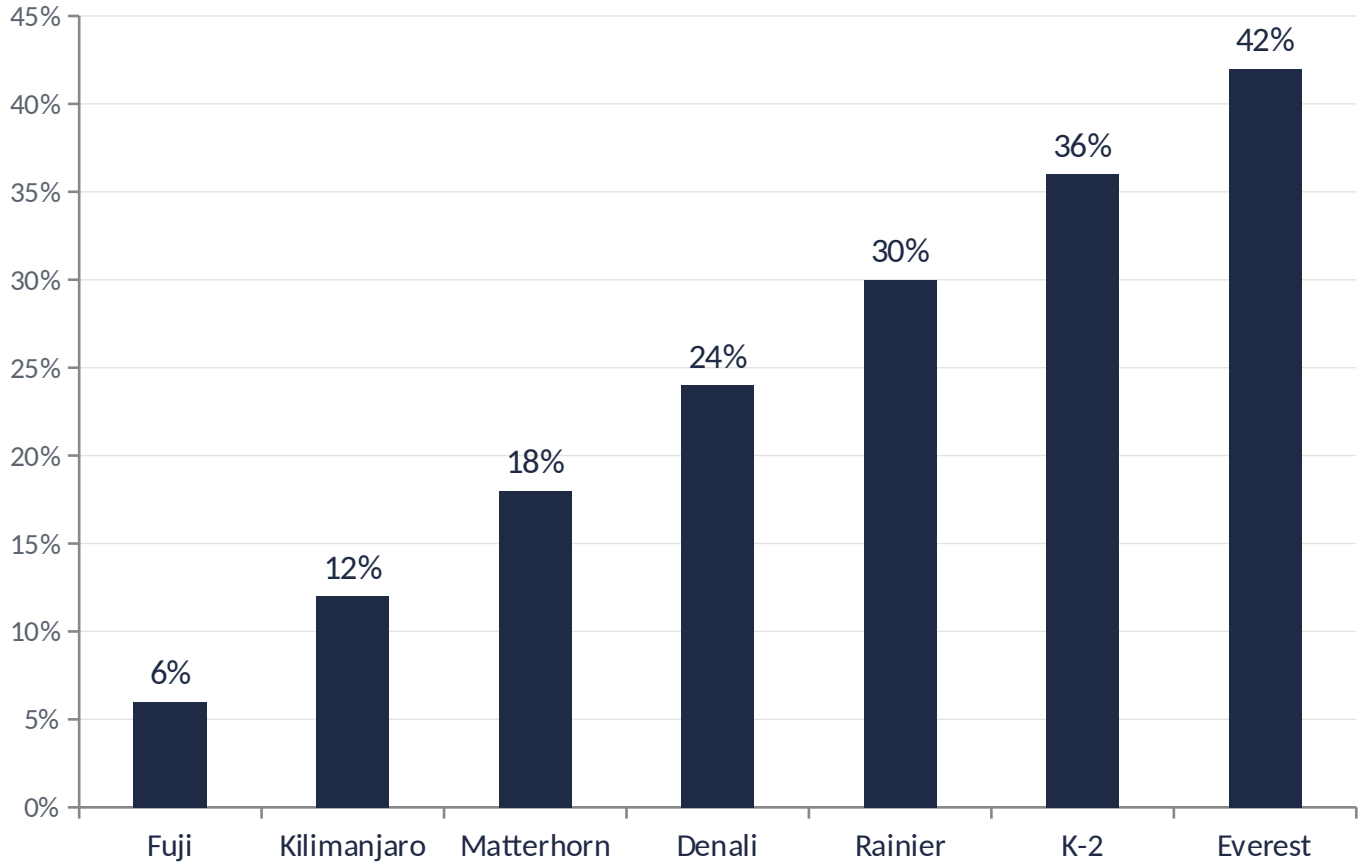

Small per module

which is the point

Rewards comes from volume, and volume comes from many members each with their own module and their own 2×.

The breakage differential: what leaders are paid

Each rank's entitlement to a contract's earnings. You receive the gap between yours and the highest already claimed below you in that line

A worked example

You are a Denali (24%) at the head of a new line whose first leader below you is a Fuji (6%). Nothing between you has claimed any of the gap, so you collect the whole 18 points above the Fuji on every contract in that line.

900 USDT

a day in differential on 1,000,000 USDT of modules in that line, at the average daily result — about 27,000 USDT a month, on top of the base matrix

Not capped · no depth limit · when someone below you reaches your rank, their part of the gap is theirs

Four organizations, worked to the USDT

Complete small organizations calculated with the same engine as every figure in the Delta One library — per month, at the average daily result

Scenario	Your purchase	Team volume	Lines	Your rank	Base / month	Differential / month	Total / month
A · Your first rank	1,000 USDT	2,000 USDT	2 × 1,000 USDT	Fuji	6.00 USDT	12.00 USDT	**18.00 USDT**
B · Building to Matterhorn	6,000 USDT	13,500 USDT	4 balanced lines	Matterhorn	40.50 USDT	284 USDT	**324 USDT**
C · Same team, one heavy line	6,000 USDT	13,500 USDT	10,000 USDT in one line	Kilimanjaro	40.50 USDT	202 USDT	**243 USDT**
D · A Denali with five lines	12,000 USDT	38,500 USDT	5 lines, each led by a Kilimanjaro	Denali	116 USDT	875 USDT	**990 USDT**

Compare B and C. Same 13,500 USDT of team volume. With 10,000 USDT of it in one line, only 4,000 USDT of that line counts toward Matterhorn, so you qualify as Kilimanjaro: fewer paid levels and a smaller gap. Balanced lines earn the higher rank, deeper pay and the larger differential. Your own module also earns its member result — 30 USDT a month on 6,000 USDT at the average — until it reaches 2×.

The Believer: 220% instead of 200%

A member who commits to keeping Auto-Rebuy ON for a module's entire life — and what that means for the line above them

	Standard module	Believer module
Auto-Rebuy switch	Yours to set from day 11, any day	**Locked ON from the choice until 220%**
Delivers in total	200% of the purchase price	**220% of the purchase price**
On 10,000 USDT at the 0.50% a day average	20,000 USDT · ends about day 400	**22,000 USDT · ends about day 440**
Rewards beyond the purchase price	10,000 USDT on 10,000 USDT	**12,000 USDT on 10,000 USDT**
Where the results go	Wallet or rebuy — your choice	**Always into rebuy modules, each with its own 2×**

Binding

Once chosen, the switch cannot be turned OFF until the module has delivered 220%.

Volume for your line

Every one of a Believer's results becomes a new rebuy module — new qualifying volume and new contracts paying the upline.

Day counts are averages

The 220% is reached as the rebuy modules deliver; a lower average makes every date later.

Six rules to remember

Say these out loud to prospects — they build trust

Paid on earnings, never on purchases

Commission is a share of what a contract earns that day. A purchase price never pays anyone.

No profit, no payout

A day without trading profit pays nobody — no member result, no commission.

Balance your lines

One line counts for at most 50% / 33⅓% / 25% / 20% of a rank's volume.

Stay ahead

When someone below you matches your rank, their part of the gap is theirs.

Modules end at 2×

Commissions on a module stop when it ends; only active modules count toward volume. New modules restart the cycle.

Paid daily, in USDT

Settlement at 12:00 UTC every day; commission to your app wallet in USDT on BNB Smart Chain. Withdraw any time, 5 USDT minimum, gas fee only.

Delta One Momentum Plan — the whole plan on a napkin

Napkin Presentation

Five minutes over coffee: buy a module, the 100 USDT split, balanced lines, paid two ways.

Important disclosures

- Draft for legal and compliance review. Not an offer. Nothing here goes to a prospect before sign-off.
- Every figure is a hypothetical illustration at the engine's average daily result of 0.50% a day (1.00% gross). Individual days vary from zero to several percent; the average can change; days without profit pay nothing.
- Results and rewards are not guaranteed by Delta One, a bank or any government scheme. Most members in the model earn no commission at all. Rewards examples are not typical results.
- A module is a software purchase, not a deposit: the purchase price is not refundable and cannot be withdrawn. A module delivers at most 2× its purchase price, price included, and cannot be cancelled before 2×. The amount can be lost in whole or in part. USDT can lose its peg; exchanges, custodians and the network can fail.
- Programs that pay introducers from the trading results of the people they enroll are regulated as securities and/or direct selling in many jurisdictions. Licensing and legal review come before marketing.
- Nothing in this presentation is legal, tax or financial advice. Only purchase a module with money you can afford to lose entirely, and ask questions before you buy.

Build wide. Stay ahead. Tell the truth about the risks.

The Momentum Plan — Delta One, October 2026
