PROSPECT CONVERSATION GUIDE

Nine moves, seventeen questions, ten objections, ten analogies: how a Delta One conversation goes

DISTRIBUTORS · OCTOBER 2026

WHAT THIS DOCUMENT IS

How a good conversation goes: nine steps, seventeen questions, ten objections, ten comparisons that stay inside the rules.

01 · BEFORE THE CONVERSATION

How a Delta One conversation goes

The distributor edition of Aria's method: nine moves, the questions that carry them, the objections you welcome, and the analogies that explain a mechanism without promising anything. It is a guide to listening, not a script to recite.

Three things before you open your mouth. You have sent the **Key Facts** and the person has had it a day. You have the **presentation** open, or the Napkin and a pen. And you have decided to say the word **average** every time a number appears, and to read the disclosure page in full, because the people who do that are the people whose members stay.

What you are not doing. You are not persuading anyone to put in money. You are explaining a software product and an optional plan, exactly as written, and letting the person decide with full information. If a person decides no, you have done your job.

02 · THE NINE MOVES

The shape of the conversation

Move	What it looks like
Open with permission	A question that earns fifteen minutes, then the honest frame: averages, not promises. (Tracy, Ziglar)
The product in three points	Engine, module, 2× then it ends. Numbered, plain, and confirmed with 'which of the three shall I go deeper on?' (Tim Sales)
Agreement on principle	'Does it make sense that commission should only come from profit the engine actually made?' Yes before numbers. (Ziglar)
The average, slowly	The most important slide. Slow pace, one idea per sentence, one question: 'Can we agree every number from here on is an average?'
The mechanism, then the number, then the behaviour it rewards	Base matrix, differential, line balance: show how it works, show one worked number, name what to do. (SPIN)
Pictures the prospect can own	'Where on this table in ninety days?' 'Which of these four organizations looks like yours?' (Robbins, Ziglar)
Welcome the objection	Listen, label, question, answer, confirm. Every slide carries its own expected objection. (Tracy, Voss)

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Move	What it looks like
The disclosure, with confidence	Same voice as the benefits. It is part of the sale.
Ask for the next step, then be quiet	Read the Key Facts tonight; book the questions call; decide on an amount you could afford to lose. (Ziglar, Tracy)

03 · SLIDE BY SLIDE

The question to ask, and the objection to welcome

Each slide of the presentation carries one question that invites the prospect in, and one objection that usually arrives there. The answer is written for you; say it in your own words, keep every fact in it.

Slide	Ask the prospect	When they ask...	Answer
1 · The Momentum Plan	Would seeing every rule and number before putting in a USDT be worth fifteen minutes?	Is this an investment?	Good question, and the answer is no. You purchase a software product: a module of the Delta One AI trading engine. The engine does the trading, and your module pays you a share of what it makes until it has delivered twice the purchase price. Then it ends. Would it help if I showed you exactly how a module runs?
2 · Delta One in one minute	Which of the three would you like me to go deeper on?	Can I get my purchase price back?	Not separately, and I want to be straight with you about that. It comes back as the first half of the module's results. If the engine stops earning, what has not been paid is not owed. That is why we only ever recommend an amount you could afford to lose.
3 · Every 100 USDT of trading profit	Does it make sense that a commission should only come from profit the engine actually made that day?	Where does my commission come from if nobody new joins?	From the twenty five USDT of every hundred of trading profit. New members add volume, but the money itself is trading profit, which is exactly why a day without profit pays nobody. Would you want it any other way?
4 · 0.50% a day is the average	Can we agree that every number from here on is an average?	What did it make last month?	I'll only quote what I can show you. Ask me for the published trade reports and read them yourself. What I will never do is promise you a figure, because nobody honest can.
5 · A 1,000 USDT module at the average	Which of the five steps would you like me to explain again?	Can I stop early and take my purchase price out?	No, and I'd rather you know that now. A module cannot be cancelled before two times; only results can be withdrawn. That is the trade: no early exit, in exchange for a module that keeps paying until it has delivered two times.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing. Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk. Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Slide	Ask the prospect	When they ask...	Answer
6 · Paid two ways	Which of the two ways would you build for?	Is this a pyramid?	I'm glad you asked, because I'd ask too. Nobody here is paid for recruiting. Every commission is a percentage of what a contract earned that day from trading, and a purchase price pays nobody. Most members earn no commission at all, and the rewards disclosure says so in writing. Would you like to see that page?
7 · The two ways you are paid	Do you see why a leader who stays ahead is paid on all their lines?	Why only two percent per level?	Because it is two percent of earnings, every single day, not two percent of a purchase once. Rewards comes from volume: a million USDT of modules inside your paid levels is a hundred USDT a day from the base matrix alone, before the differential.
8 · Seven ranks	Where do you see yourself on this table in ninety days?	Does my own purchase count toward volume?	No. Your own purchase is checked separately against the rank's minimum, and qualifying volume is your downline. That keeps the rank honest: you rank on what your team builds, not on what you buy.
9 · Build wide: the line balance rule	How many lines could you open in your first month?	What if one of my people is a superstar?	Wonderful for them, and wonderful for you. Their line counts up to the share, and your differential on that line can still be large. To rank up, you need other lines. The superstar is a reason to build wide, not a reason to stop.
10 · The base matrix in numbers	What would a million USDT of volume look like in your network?	Is three thousand a month typical?	No, and I won't pretend it is. It needs a million USDT of active modules inside your paid levels, and most members earn no commission at all. It is what the arithmetic pays at that volume, at the average, no more and no less.
11 · The breakage differential	Opening new lines or staying ahead: which comes more naturally to you?	What happens when my leader catches up to my rank?	Their part of the gap is theirs from that day, and they earned it. Your answer is the same as theirs was: keep ranking up and keep opening new lines. The plan keeps paying the person who keeps leading.
12 · Four organizations, worked to the USDT	Which of these four looks most like the organization you would build?	These numbers look small.	They are honest, and I'd rather show you honest numbers than impressive ones. They are monthly figures at the average, for small organizations, and your own module's result comes on top. The larger organizations are worked through in the Distributor Guide.
13 · The Believer	Is the Believer a choice you'd make for yourself?	Can a Believer change their mind?	No. Once chosen, the switch cannot be turned off until two hundred and twenty percent has been delivered. That is why I'd only suggest it for a module you are certain you won't need to draw on.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing.
Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk.
Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Slide	Ask the prospect	When they ask…	Answer
14 · Six rules to remember	Which of the six rules do you think most people forget?	When exactly am I paid?	Every day at twelve noon UTC, for the previous day's profit, straight into your app wallet. Withdrawals are instant, five USDT minimum, gas fee only. Daily pay, no waiting for month end.
15 · The documents behind this presentation	May I send you the Key Facts and the Product Guide right now?	Which one do I send first?	The one page key facts, always. Then the product guide. A prospect who has read both has no surprises, and a prospect with no surprises stays.
16 · Important disclosures	Is there anything on this page you'd like me to explain?	Do I really have to read all of that?	Yes, every time, and I'll tell you why: compliance approval of these figures and your reading of the disclosure are what make this a professional business instead of a promise. The people you introduce deserve the same.
17 · Build wide. Stay ahead. Tell the truth about the risks.	What would you like to do next?	What is the next step?	Read the key facts and the product guide, ask me every question you have, and only then decide on a module size you could afford to lose. Shall we put a time in the diary for those questions?

04 · WELCOME THE OBJECTION

Listen, label, ask, answer, confirm

An objection is the prospect telling you what they need to hear. Listen to the end. Label the feeling ("it sounds like the word average worries you"). Ask one question to understand it. Answer plainly, with the fact. Confirm ("does that answer it?"). Then stop talking.

They say	You answer
Is this an investment?	No. A software purchase of the AI engine, in modules. The engine trades; the module pays a share of what it makes until 2× the price, then ends. 'Would it help to see how one module runs?'
Can I get my money back?	Not separately; it comes back as the first half of the results. The purchase price is not refundable. 'That is why I only ever suggest an amount you could afford to lose.'
Is this a pyramid?	Nobody is paid for recruiting; every commission is a share of a contract's daily earnings from trading, and a purchase pays nobody. Most members earn no commission; the rewards disclosure says so. 'Shall I show you that page?'
What did it make last month?	'I will only quote what I can show you.' Point to the published trade reports. Never promise a figure.

They say	You answer
The numbers look small.	'They are honest.' Monthly, at the average, for small organizations; the member's own module result comes on top. Larger organizations are in the Distributor Guide.
It sounds too good.	Label it: 'It sounds like the word average worries you, and it should.' Then the variance: some days zero, some days several percent; no profit, no payout; the average can change.
I need to think about it.	'Of course. What would you most like to think about?' Answer that, then: 'May I send you the Key Facts and the Product Guide tonight?'
I don't know anyone to introduce.	'Then start as a member, not a distributor.' The module stands on its own; the plan is optional. Most members never use it.
What if my leader catches up to my rank?	Their part of the gap is theirs from that day, and they earned it. 'Your answer is the same as theirs was: rank up and open new lines.'
Why should I trust Delta One?	The founders, the written rules, the daily settlement, the audit. 'Read the Key Facts, then ask me the hardest question you have.'

05 · ANALOGIES

Pictures that explain a mechanism

Every analogy below keeps its own cold-oven day: it explains how something works and never suggests certainty the product does not have. Use one at a time, and follow it with the real rule.

Analogy	How it goes
The engine is a bakery	Bolt bakes every day. Some days the oven is cold and nothing comes out; some days there are more loaves than shelves. A module buys you a share of what the bakery produces, not a share of the building. 'No profit, no payout' is a cold-oven day.
The average is a farmer's yield	A farmer talks in tons per acre over a season, never in what one field did on one Tuesday. Half a percent a day is Delta One's yield per acre; any one day is weather.
A module is a pre-paid meter	You buy the engine's time, it ticks until it has delivered twice what you paid, and then the meter is empty. The first half of the ticks repay the price; the second half is the rewards. You cannot ask for the money back from a meter.
Rebuy is planting seed	Every result you rebuy is seed, not bread: a new module with its own two times. A Believer plants the whole harvest for the module's whole life, which is why the Believer module delivers more and why nothing is in the barn until the switch unlocks.
The line balance rule is a table	A table needs legs on more than one side or it tips. One giant leg and three stumps is a Kilimanjaro, not a Matterhorn. Build wide, like a table; not tall, like a flagpole.
The base matrix is a toll road	Two percent of each contract's daily earnings on every level your rank reaches: a toll on every car that passes, small per car, serious on a busy road. Volume is the traffic.

Modules pay out at most 2× the purchase price (price included); remaining balances are kept by the DAO Treasury. No-profit or losing days pay nothing.
Disclosure: illustrations at the engine's 0.50–1.00% average daily result; days vary from zero to several percent. Not a guarantee of earnings. Capital at risk.
Result and rewards figures require compliance approval before external use. Not legal, tax or financial advice.

Analogy	How it goes
The differential is the mountain guide's bonus	The first guide to the summit is paid for the whole climb above the last camp below them. When a climber below reaches the same camp, that part of the climb is theirs. Stay ahead.
Ranks are mountains	Every mountain is climbed every day, because ranks are rechecked at every settlement. You do not own a summit; you stand on it as long as your team does.
Payday is the baker's bell	At twelve noon UTC the bell rings and the day's share is in the wallet. Daily pay, not month end; five USDT minimum, only the network fee.
Honesty is the lighthouse	Prospects do not buy the ship; they buy the certainty that the person steering it tells the truth about the rocks. The disclosure is the lighthouse. Aria reads it in full, every time.

06 · CLOSING

Ask for a small next step, then be quiet

- "Read the Key Facts tonight; it is one page. Read the Product Guide this week. Then call me with your questions. Shall we put a time in the diary?"
- "Only after your questions are answered, decide on a module size you could afford to lose entirely."
- "If you'd rather start as a member and not introduce anyone, that is a complete choice. The plan is optional."
- Then say nothing. The next person to speak decides what happens next; let it be them.

The disclosure page is read in full, every time, in the same voice as the benefits. Every figure is an illustration at the engine's average daily result; results and rewards are not guaranteed; most members earn no commission at all; a module's purchase price is not refundable and can be lost. Draft for legal and compliance review.
